54 XENOPHOBE

Become a psychotic, ranting fascist alien-basher – and save a space station while you're at it

63 DYNAMITE DUX

If you go quackers over foul gameplay, *Dynamite Dux* should fit the bill...

36 GALLERY

Man goes into a pub. "Hello Mr van Gogh, can I buy you a drink?" "No thanks, I've got one ear."

New faces

Wot, no Steve Carey? Indeed not. Steve has moved on to pastures new (AA's sister magazine *ST Format*, to be exact), and his cheery visage will greet you no more. (Hankies out, ladies...)

In his long stint as *Amstrad Action*'s editor, Steve ensured the magazine's position as the undisputed no. 1 in the CPC world. His will be a hard act to follow, but we already have plans for making AA even better at a time when the CPC itself is going from strength to strength. Amstrad's machine is the best 8-bit micro you can buy, and we aim to make sure that *Amstrad Action* is the best magazine you can buy for it.

But don't worry that staff changes are going to upset the balance of your favourite magazine. Far from it. The most important thing in *Amstrad Action* is not the people who write it, but is instead – and will always be – its readers. You. And that's one thing that's not going to change.

40 HELPLINE

THE CPC GOES ON

● Amstrad squashes rumours

Amstrad has responded hotly to rumours in the press suggesting that the company is about to drop the CPC range.

Malcolm Miller, Amstrad's Sales and Marketing Director told AA that "The CPC market is very healthy. Of course we haven't ceased manufacturing it - we'll be selling it for a long time yet." He went on, "We're continuing to manufacture the CPC - that's all there is to it."

● Miller: CPC future assured.

And part of the current CPC sales drive is the inclusion of a free colour TV with its latest CPC bundle! Sounds too good to be true? Well, not really. With each colour 6128 sold, Amstrad is now giving away a free TV tuner. Simply plug this gadget into your monitor and you've got yourself a colour telly!

The price of the bundle is £399, and with it you also get a joystick and 17 free games. *Monopoly*, *Scalextric*, *Cluedo*, *Trivial Pursuit* and *Scrabble* are just a few.

● Amstrad's CPC6128: now comes with free TV tuner.

Profits of doom...

Amstrad has just released preliminary results for the year ending 30th June 1989 - and pretty depressing reading they make.

Turnover was virtually unchanged compared to the year before, at £626 million, but profits before tax were down from £160 million to £77 million. The official line is that last year's DRAM price rises were one of the prime causes of the company's "margin erosion", but other factors which can't have helped include a vastly premature ad campaign for the PC2000 series and the recall of thousands of PCs with hard disk controller faults.

● With all the furore surrounding Amstrad's PC ranges, the company's Z80-based PCW and CPC just keep on going. Maybe there's a lesson for Amstrad in there somewhere...

Next month: The Untouchables on the AA Christmas covertape! Oh, you lucky, lucky people...

SHOW OFF!

PC Show organisers Montbuild and VNU have fallen out, with the result that this year's PC Show was the last. (See the PC Show report on page 16 for more details) Arguments arose over the show's future direction and management, and VNU has now served Montbuild with a writ alleging breach of promise.

Montbuild is defending itself vigorously and has announced its own show for next year - Business Computing '90 - which will take place at Earls Court between the 25th and 28th September. This comes at a time when more and more pundits are questioning the effectiveness of "multi-purpose" shows covering both the business and leisure sectors. Indeed, magazine publisher EMAP has already announced a European Computer Entertainment Show, again to be held at Earls Court, this time between the 13th and 16th September. Both shows take place at the traditional time - and location - of the old PC Show.

VNU has yet to announce its plans, but already

it seems that Earls Court is booked solid next autumn...

Coming soon: Five Atari Lynx handheld games machines to be won!

Only just on sale in the States, YOU could be one of the first in this country to own one of Atari's pocket miracles...

MICRONET MERGER

British Telecom has bought out Telemap – the company behind Micronet – and the immensely popular multi-user role playing game *Shades*.

BT, which already owns Prestel and Telecom Gold, is understood to have paid a large sum to take total control of the company. Telecom previously owned 40% of the shares, the remainder being held by publishing giant EMAP and Bell Canada.

Micronet has been around since 1983, and BT has been responsible for the daily running of the company since 1986. The move is regarded as a consolidation of resources, and is reckoned to be good news for Micronet subscribers.

The story comes at a time when BT has lost control of Microlink – the business-oriented electronic messaging service – to Istel Inet in a deal worth £10 million over the next three years.

Neat and Tidy

Budgie Office Products has launched an indispensable device for the tidy computer user. Its unique *Cable Tidy Pack* aims to hide unsightly trailing monitor leads and telephone wires, a lost cause for the AA office. The kit consists of one metre of clip-on channelling which can be cut to size and six self-adhesive cable clips. Budgie can be contacted on 0323 648471

Pretty Polly

If you're anything like us at the AA office, you'll have trouble finding the disk you want because the label is covered in a totally illegible mess, having had so many different titles scribbled all over it.

Not any more. BlackStuff Ltd has launched *Polly Labels*, an everlasting disk labelling kit. Simply stick a special label over the existing one on the disk, write on it with the disk pen provided and even add a colour-coded marker if you wish. When it comes to changing the disk contents, you can use the eraser pen for minor alterations or a cotton pad impregnated with cleaning fluid to wipe the whole lot clean.

The complete *Polly Labels* kit costs £13.74. Contact the boys from BlackStuff on 0737 833015.

Tally Ho

The Mannesmann Tally MT222 printer has had over £100 lopped off its retail price. The pricey printer – acclaimed for its excellent 24-pin quality combined with very fast printing speed – was originally being retailed at £799.25, but is now available at £684.25.

Call Mannesmann Tally on 0734 503681.

Stop Press... Stop Press...

Medway/King have announced a new version of *X-Press*, the bolt-on package for the *Stop Press* DTP system. The upgrade will now work on the 464, and has been modified to work with double drive systems. Owners of V1.0, the original program can get their hands on the new improved V1.1 by sending £1 to cover postage costs to: Medway/King, 77 Maldon Road, Bitterne, Southampton, SO2 7AF

Senior Citizen

That ever-popular budget printer, the Citizen 120D, has been celebrating passing the 500,000 worldwide sales mark.

Citizen has revamped the four-year-old printer with a newly-designed tractor feed mechanism which will improve paper handling to produce sharper print and graphics quality. The new model has several other minor improvements, including wider paper handling and an adapted pressure leaf which provides a better hold on paper during printing. The printer retains its recommended retail price of £199, but will be available at the usual cut-down prices from mail order advertisers. Citizen is on 0895 72621.

Twins Double

The CPC version of the forthcoming Activision Christmas No.1 contender *Ghostbusters 2* has been written by none other than The Oliver Twins. This – and the fact that they also wrote *Incredible Shrinking Sphere* for Activision last year – has led to rumours that the twins may be abandoning Codemasters. Rumours that were quashed by Philip Oliver:

"We can earn at least as much, if not more, from a budget release. We have a good working relationship with Codemasters, and find budget games more rewarding as they reach a much wider audience. I am not ruling out the possibility of us doing a full price release in the future, but we don't have any immediate plans to write one."

The Oliver Twins have also been beaver away in more familiar territory on the long-awaited *Dizzy 3*, entitled *Fantasy World Dizzy*. The game should be in the shops in time for Christmas and is widely expected to top the budget charts.

It features the popular cartoon hero in search of his girlfriend Daisy, who has been kidnapped and locked away in a castle. Several other 'Yolk Folk' have been introduced, including the acid cool egg Denzil, and elderly egg-head Grand-Dizzy. AA staff have seen an early preview edition, but can say no more – on pain of death at the hands of the terrible twins – other than that it features the usual Dizzy arcade adventure format, with plenty of original puzzles to ponder over.

The game is being released by Codemasters under a new label – Cartoon time. Look out for the exclusive review in next month's bumper Christmas edition of AA.

That's the spirit!

Adventurers up and down the land are mourning the latest release from Level 9. Why? Simply because it's the company's last ever CPC product. Level 9 does however look like it will be going out with a bit of a bang, as the game *Scapeghost* is centred around the antics of a deceased and betrayed gangster.

The aggrieved spirit has only three days to clear his name, but has a whole host of supernatural tricks up his sleeve. Dead men don't tell tales, but they may have some haunting secrets they want to let out. *Balrog* will be gunning for this epic next month.

Ozzie rules UK!

Britain's been going minority sport crazy in recent months, so Again Again has decided it's time to get in on the action and has announced an *Australian Rules Football* game. This computer sporting first was unveiled

during the Fosters World Cup Final at the Oval recently, and while the Bombers and the Demons fought it out on the pitch, reviewers could be heard fighting it out with their computer opponents.

AA was there and promises to bring you a full report on the early scores in the opening match next month (that gives us four weeks to figure out the rules - ed!).

First impressions

● Ghouls and Ghosts - US Gold

The sequel to an old favourite, *Ghouls and Ghosts* is coming for Christmas.

● The Duel - Accolade

This car sim/race game puts you in control of a Porsche 959 and a Ferrari F40. The family Sierra will never seem the same again.

● After the war - Dinamic

Spanish coders look as if they've done it again with a beat-em/shoot-em/anything you can-em-up boasting giant sprites.

● Dr Doom's Revenge - Titus

After last month's news on the superhero epic, here are the first screen shots of the CPC version

● Top left - *The Duel*. ● Top right - *Ghouls and Ghosts*. ● Bottom left - *Dr Doom*. ● Bottom right - *After the War*.

Contractual Claus.

It's official, Santa Claus does exist. He's come down from his polar hideaway to give the **Save the Children Fund** a hand during Christmas. To raise money he will be appearing in *The Official Father Christmas* game from Alternative. All the royalties from this £2.99 product will go to **Save the Children**. So if you're looking for a stocking-filler for a CPC fan, this is the game to get.

In this three-part game you've first got to assemble Santa's sled, then find the toys the elves have hidden. When all this is done you've got to answer the Christmas pleas of children all over the world.

Last year **Save the Children** spent over £28,000,000 on overseas projects and £7,000,000 in the UK. Its job is difficult and often dangerous, and as you can imagine, children's lives are not saved by care alone. It's an expensive business, and both Alternative and Save the Children deserve a pat on the back. And being charitable can also be fun!

review

Listing carefully...

Former Tax Officer and QA clerk Angela Allum plans to start the first professional listings-typing-in and games help service for the CPC. She collects details of all the pokes and hints she can find and then uses them to solve a game - or get near a solution. Her games helpline will be open from 6pm to 9pm most evenings.

Angela also enjoys typing in listings to see what they do - and how. Her program analysis service will use Beebugsoft's Toolkit to find the variables. Also on offer is disassembly of machine code used in *Type-Ins* and tracing of simple machine code programs to printer. Find out more by writing to Angela Allum, 22 Point Royal, Bracknell, Berks or calling 0344 428053.

Blatant plug

This month sees the launch of a new game on the Players label - *The Lost Caves and the Doom Tomb*. A certain Mr Adam Waring was responsible for both the product and the threats that produced this story. AA will be giving this 'awesome gaming experience' a good kicking (review surely - ed?) next month. In the meantime, check it out - it's your chance to see how good (or bad) an AA Tech Ed really is.

REACTION

The GPO is having to send vans round with the post now – keep it up!

●The write stuff

You have of course heard of the North/South divide! Well now there's a new divide – the 64K/128K divide. It seems (to me, anyway) that most software houses are turning their backs on 464 owners (not forgetting that the 464 gave them the money in the first place) in favour of 6128 owners. It seems that a lot more products/utilities are released on disk only or make use of the 64K extra the 128 has. Undoubtedly it is a far superior machine, but wouldn't it be a far greater achievement if programmers gave the same on tape?

It is not impossible. They could make the tape a multiload rather than a disk-only release, just loading whatever the system needs, when the system needs it.

Indeed, you at AA are responsible for part of this divide by releasing *Shinobi* as part of the cover cassette but without sound or speech for 'poor' little 464 users.

OK, so I'm beginning to sound like Wm ACC Smith, but this subject really riles me.

Even some authors in *Type-Ins* seem to forget that people have 464s by adding FILL commands. There's nothing more infuriating than typing in a listing only to find a FILL command at the bottom of the program.

Michael Heyes (proud 464 owner)
Nelson, Lancs

AA: Well Michael, there seems little point in upgrading a machine and then steadfastly refusing to use any of the new features! Of course software houses will write for the 6128, and indeed many releases are bound to run on that machine only. Multiload tape software would be all very well, but have you really used multiload software? The prospect of loading Protex's spellchecker from tape, for example, is too appalling to contemplate.

As for us at AA being biased

Got a bee in your bonnet? Something you want to get off your chest? Reckon so-and-so hasn't got a leg to stand on? Write to: Reaction, AA, 4 Queen St, Bath BA1 1EJ. There's £15 on offer for the letter of the month!

against the 464 – what rubbish!

We feature software for the CPC, regardless of whether it's for the 464 or 6128. We only reflect the industry and the users' interests – we don't dictate them! Besides, when it comes to budget software, I would say 6128 owners were discriminated against, wouldn't you?

Still, let it not be said that we don't listen to our readers. Anyone else out there think their machine (464 or 6128) is getting a raw deal? You know where to reach us...

●The write stuff

I am writing following the article about fanzines – which was very interesting. I myself know how hard it is to set up a fanzine. In my case it was for all Amstrad CPC owners. I advertised firstly in one

monthly computer mag and then wrote to various others which cater for the CPC asking if they would mention me in their news pages. Out of the five that I wrote to only one obliged by giving me an article which measured about three inches by four inches on their news page; which if I had advertised properly would have cost a lot of money.

Even so, in the next four months I only received around 20 answers. Firstly I think this shows how unhelpful some large magazines can be in helping a small fanzine get started. And secondly, I now wonder whether people even want fanzines.

Your competition is an original idea and I'm sure many people will have a go. But it's a difficult world out there, and if you want your idea to work I think you're going to need lots of energy and plenty of the will 'not to give up'.

Andrew J Scott
Soham, Cambs

●Drop those shadows!

Who's responsible for letting that silly twit loose again who puts shadows all over the printing so us poor OAPs have a hard time reading it? I thought you'd got rid of him (or her) over a year ago. I have got every issue of your great magazine. We had a spell of this wozzack before and I missed loads of help info and type-ins because of him. Now he's back again – shadow boxing over p14, over piano keys on p18, shaking hands on p21, walking all over p22, blue blotches on pages 46, 47 and 50. Sickening colours all over the *Cheat Mode* pages.

Thank goodness there was nowt over Hugh Gammon's tip for Multiface saving. Thank you Hugh, you've saved me a heck of a lot of disk space.

Please, please, please give us OAPs a break and transfer this mixed-up child to the Outer Hebrides. I don't want to miss one word in your excellent and very helpful AA.

Thank goodness you kept him off this month's type-ins.

Laurie Mash
Wakefield

AA: Rest assured Mr Mash, our Art Editor is even now writing out 5,000 lines saying "I must not put shadows behind all the text".

AA: You're right Andrew, you do need to keep plugging away. You're wrong to say magazines are unhelpful though. Any news item has to be both interesting and important to get into a magazine's news pages and, with the best will in the world, a new fanzine is not big news.

The best bet for would-be publishers is to first establish that there is a market for the magazine you wish to produce, rather than to do what you feel like and then try to sell it. As for whether people really do want fanzines – just look at all the successful publications there are out there.

●Bad circulation

AA's *Amscene* proudly proclaims that its latest circulation figures, for January to June 1989, are 35189, and this is stated to be a year-on increase in sales.

Certainly, the January to June 1988 figure is 35095 – an increase of 94 (wow!). But shouldn't you be comparing these latest figures with the immediately-preceding figure, which is 38457. This shows that AA's circulation has dropped by 3268 – a drop of 8.5% on the previous six months. Care to comment?

Alan Coole
Glasgow

AA: OK, if you insist. The point about six-monthly circulation figures is that the summer market is quite different to the winter one. Therefore, the only direct comparisons you can make are between the same six-month periods in successive years. Sorry you think the increase is so measly. In the CPC market, which many people seem determined to think is contracting, we were rather pleased. Suit yourself, though.

●Raving mad

In the October *Reaction* pages, Derek Wong from Surrey said that your Raves and Mastergames are rarely successful in the Gallup charts. Firstly, this is not true. *Treasure Island* *Dizzy* and

CRUEL BEAST

I must be one of the people Judge Maxton (AA49) would want to put away for excessive cruelty to computers.

In the winter of '84/'85 I split the price of a new 464 with colour monitor with my father. He was to use it to drive a demonstration rig for his firm at a business fair, after which it would be redundant.

The firm built ultrasonic testing tanks for aircraft components. These included a probe able to be moved along all three axes to follow intricate aircraft shapes. The role of the 464 was to gather the data and represent it as a screen of false colour, to show any hidden faults in the aircraft part.

It's interesting to note that the computer which does the same job for real rigs is a £25,000 twin-80Mb hard disk IBM-compatible 8MHz Ferranti or 20MHz Compaq; the only difference being speed and storage.

Torture

The miniature tank was completed while I wrote the software. The next job was to connect the rig to the joystick port which was the agreed input hole. It was during this time that an unearthed soldering iron was being used on the tank's computer whilst the unsuspecting 464 was up and running. 20 amps travelled up the joystick port and melted the first chip it came to. It must have been

the keyboard chip because the effect was like someone randomly hitting the keyboard. Pretty, but useless. The Amstrad Kwik-Fit guys soon sorted that out.

Beatings

The computer was given to me, and since then the unit has travelled approximately a thousand miles strapped into the front seats of various cars, been fallen on and dropped twice. The effects are that the 'F0' key is held on with superglue (where the monitor fell on it) and there is a large chunk of plastic missing from the back of the monitor. This happened in January; I was running into my brother's house with the monitor during the Superbowl half time to play *Matchday II* when I slipped and fell. The monitor landed on concrete just as I landed on top of it. I didn't kill my monitor, in fact it works normally except snowing a bit when the brightness is adjusted.

A strong industrial magnet was left next to the monitor for about two days without use. On power up, I was confronted with large boils of colour spread across the usual message. Careful positioning of the magnet would cancel these, but only whilst the magnet was present. If computers contract tropical diseases, they are short-lived, because I switched off and the monitor cured itself inside half an hour.

Mutilation

The computer's current add-ons list left over from its industrial days is as follows:

- 1 Canon PJ1080A colour inkjet printer
- 2 DK'tronics speech synth (old style)
- 3 Approx nine various working and non-working joysticks (including baseless)
- 4 Joystick port splitter
- 5 KDS Electronics 8-bit printer port
- 6 One-metre coiled lead extension box
- 7 External speaker soldered to replace the internal one-inch effort
- 8 Large blob of Blu-tack stuck to the side of the monitor

I am currently writing a game which Codemasters will publish (although they don't know it yet). My system must be one in a million to survive my father and I. It is still going strong as a serious games machine/word processor/ games writer/ student project writer/ pretty pictures producer. There is nothing wrong with a tape-driven 464 and the old-style keyboard. It's produced the business time and time again and doesn't crash when it wobbles. Speaking of the ZX81, when is *3D Monster Maze* being converted? I have yet to see an Amstrad game produce the same fear of being eaten.

Chris Surawoy
Chippenham, Wiltshire

AA: If there was a Royal Society for the Prevention of Cruelty to CPCs, Chris, you'd be reported right away. There was scarcely a dry eye in the AA office as we read of the appalling hardships and agonies endured by

your trusty machine.
We just hope you can live with yourself.

Operation Wolf were both Raved and did (and are still doing) extremely well in the charts and others (Emlyn

Hughes International Soccer, Crazy Cars 2, WEC le Mans) also did fairly well.

Secondly, nowadays it is much harder to get a full-price or original game into the charts with the current tidal wave of Raves from the past being re-released on budget, doing better in the charts than they did before.

Thirdly, AA Raves and Mastergames are better than the games currently topping the charts, so come on AA readers, buy the Mastergames! I buy three-six games a month, some of them being full-price, some being games at the top of the chart and others being high-rated AA

games. So far this year I have bought 12 games which received good AA reviews and have sent off for another. I think all the games are Mega. (Except *Microprose Soccer* on tape - but you did warn me!)

Now for something completely different. Do you or any other reader have a program (preferably short) that could dump Multifaced screens to printer? I have a 6128, DMP2160 and a Multiface 2+ version 0A.

Ben Patcheson
Scaldnell, Northants

AA: Multiface print dumps? Make way for AA's resident technical knowall Adam...

"You could try loading your Multifaced grabs into an art package and then printing them out from there. This one was printed from Art Studio."

●Pat on the back

I recently purchased *Tasword*, *Tas-Spell* and *Tasprint*, but *Tasprint* would not configure to my Star LC-10 printer. I wrote to Tasman telling them of my problem, and two days later I received a replacement modified disk. This says a lot for the postal service but it says even more for Tasman Software. I think that such good service should be recognised in print.

E Kilpatrick
St Helens, Merseyside

AA: And so say all of us.

●Australian veggie

Hi. I'm writing all the way from down under in Aussie Land. And here's a few things I have to say.

I personally would like to see a lot more excitement, more full-colour pictures. Yes, full-colour pictures. I'm kind of sick of seeing black and white pictures of these new fabbo games you keep on talking about.

Speaking of games reviews, you need more. And you also need more screen shots for each game. And don't say you can't fit them in because you have before. Take for example the review of *Vindicators*. You had a very nice little film strip going up the right side of the page. Just to show us little veg-

SAVING THE AMSTRAD EMPIRE

This year like any insane person I went to the PC Show. As I own an Amstrad I popped off to ye olde Amstrad stand to ask a few questions:

Q) Why does the Speccy have a light gun bundled with it and the CPC doesn't?

A) Well we want to be different, you can't have two packs the same, can you?

Q) Why isn't Amstrad reprinting the Firmware Manual?

A) What's Firmware Manual?

Q) Why hasn't the Amstrad bundle changed and why are you still giving away the same games, which are now very basic?

A) If you come back in an hour there will be a person from the Amstrad User Group and he'll answer all your questions.

The lady then started to talk to someone else. Come on Amstrad, you have the best machine in the market for its price:

1 The graphics beat the Speccy's and the resolution's better than a C64.

2 The graphics even rival the ST - look at *Purple Saturn Day* or *Captain Blood*. 16-bit graphics on an 8-bit machine!

3 The sound is better than the C64 and the Speccy - just listen to *Zynaps* on the CPC then on the ST. If you can hear a difference let me know.

4 The CPC6128 is a small business machine. It has a wider range of serious software than the Speccy and C64 (can you find a Speccy or C64 mag which is also dedicated to serious software on a regular basis?) - just look at *Protext*, *Advanced Art Studio* and *Stop Press*.

5 The rep at the Cheetah stand showing off the light gun was talking out of the top of his head. I asked him why they were not releasing the gun on the CPC. He said that CPC owners didn't buy that many add-ons after they had bought their CPC. If

emites how good the game actually was.

Speaking of games in Australia, do you know how much it is for a newly-released game here? (No, but I think we're going to find out - ed) No? Well they cost \$44.45. Not £14.95 or £8.95 but \$44.95. And Amstrad Action alone costs \$5.20. Everything over

this is so, why are so many companies producing more add-ons for the CPC than any other computer on the market? And why do the Darling brothers (Codemasters are writing the games for the Cheetah light gun) think that the CPC is more important to them than the C64 (AA issue 35 Sep '88 p30)?

6 What computer sold the most games at Xmas last year, Mr Sugar? Why are you trying to kill off something that's good and makes money? What was Amstrad before the CPC? Nothing! It is now a very large company selling lots of computers and shares which are falling rock bottom because Mr Sugar can't take one single piece of advice. Please listen, Mr Sugar, you haven't got much time. You must act now.

Give the CPC lots of air time. Slowly kill off the 464. This should take place within the next three years. Replace it with a 4128. Or the best solution is to design an Amiga-beating computer with 8-voice stereo sound, 1046 colours and - most important - put a ROM in the machine. So when you switch it on there's a BASIC to greet you. Add a mouse, joystick - with two accessible joystick ports - built-

in MIDI and make add-ons the most important feature, with genlocks etc. A 3.5-inch disk drive is essential of course. The machine must be a 6128 16-bit, with lots on the small business side (this is vital to make it a success).

Meanwhile, change the 464's case colour (keep the 6128 the same). Redesign the keyboard so that the keys slope in a curve. Add an RS232 and change the BASIC slightly with better commands. Change the package - add the light gun and high quality games, i.e. from Ocean etc. Add *Stop Press* and *3D Zicon* with the mouse, the *Advanced Music System* and the *Protext* collection on ROM. Put a nice, enclosed Amstrad ROM board inside the case, and design it so that you are able to switch off the ROMs without pulling them out (some games don't like them fitted). Bung in the Firmware Manual, give the CPC two joystick ports and put a good quality joystick in the package, and that's it!

Jefferson Boss
Huntingdon, Cambs

AA: Er, yes. That seems to just about cover everything. Are you reading this, Amstrad?

where you little vegemites (*hang on, I'm not so sure I like being called a vege... what was that again? - ed*) are costs so little compared with Australia.

And when or if I read this letter it will be about four-six months later. Yes, that long. (*Is that from the time you started it, or from when you finished - ed*) And I got

this address out of the June edition.

Well, that's about all from me down here. If any of you little gamers would like to write to me, please do. See ya.

Shane Linley

BROADLEY SPEAKING

Uh oh, sex and piracy again...
Emma Broadley, the woman who makes Attila the Hun look like a social worker, speaks her mind...

Well Mike Wheeler had plenty to say last month about my comments on sex in computer games, didn't he? I suppose everyone's entitled to their opinion, but I think Mike still labours under the misapprehension that men really can put themselves in the position of us women. The point is that what is degrading to one is not degrading to another. He also seems to miss the point that women really are forced into taking their clothes off for money. Not every seventeen-year-old determined to make her mark as a top fashion model has either the poise or the looks, frankly, to make it, and can easily fall prey to unscrupulous agents and photographers – all men, you'll note – who are just interested in making a quick buck.

Mike also suggest that *men* are exploited by *women*, no less! Well frankly, if you'd ever been at a photographer's studio and watched a half-naked slip of a girl being ogled and prodded by half a dozen leering men during a shoot, you'd be in no doubt about who was exploiting whom!

Long live the CPC!

Nice to see that Amstrad has scotched rumours about the CPC being scrapped. Nice too to have to eat my words! Last month I complained at Amstrad for not promoting the CPC, but I learn now that the company is to invest £600,000 in a nationwide advertising campaign

– bravo! I could have told you before that the whole idea of Amstrad dropping the CPC was absurd, of course. After all, Amstrad has on its hands a solid, dependable and versatile machine with a very strong – and getting stronger – software base. The CPC is going to be with us for years yet, mark my words.

Mind you, you could easily have got the opposite impression from this year's PC Show. The games industry was well enough repre-

Broadley Brickbats

If you've got anything to say about Ms Broadley's column, or the opinions therein, write to:

Broadley Brickbats, Amstrad Action,
4 Queen Street, Bath BA1 1EJ

We would like to stress once more that the opinions expressed by Ms Broadley do not necessarily coincide with those of the editorial team. Also, we refuse to take any responsibility whatsoever for any consequences that might arise from any disagreements between correspondents and Ms Broadley. We'll visit you in hospital, though.

sented, with all manner of gaudy arcade conversions, no doubt with as much lasting appeal as an unrefrigerated French brie. But where was all the serious software? Come on all you serious manufacturers, show yourselves!

IT'S A STEAL!

"I am writing to give you my views on the rights of copying software. For a start, I disagree with just about everything that Miss Broadley said in A448. If I buy a game then it is mine to do with as I wish. Why should a friend of mine pay £9.99 for a game if I can copy it for him for free? I'm not exactly made of money, so if one of my friends (yes, I have more than one) should offer to copy a game for me then I would not refuse. I do not consider it to be stealing because I would not buy the same game that my friend had as I could play it on his computer every night.

The idea that one person buys a game one day and the whole of the school has it the next day is just a figment of Broadley's imagination. I copy games for a couple (three or four) of my friends, but nobody else.

My friends do the same. I have read some of the new copyright laws but reinforcing them is going to be next to impossible. I certainly will not be deterred by the new laws (partly because I can't understand them). My point is that I don't consider copying or lending out my games to close friends

to be 'piracy' or 'stealing' and I certainly don't consider myself to be a 'thief'.

Finally, may I just say that I would like to see a few more games reviewed and a little less of Broadley!"

M Prellear, Newport

Well, Mr Prellear, your attitude astonishes me. You say you only give your friends three or four pirated copies, and that they do the same. According to my reckoning, by the time that process has been gone through just three times you've been directly responsible for not four pirated versions but as many as sixty-four. Understanding the copyright laws is easy. You do not distribute pirate copies. Simple enough for you? As for your claim that piracy as you practice it is not theft, do you remember those old unmanned newspaper stands where the distributors trusted you to put in your money and just take one paper? What you're doing is effectively paying for one paper then taking half a dozen for all your mates. That's theft.

MAIL ORDER MADNESS

I've been forwarded a letter from one of AA's readers, and it's on a subject I've wanted to talk about for a while – mail order.

The letter is from a Mr P Hall of Basildon, and reads as follows:

"I wonder if many other readers have had trouble with mail order companies advertising games, and not just delays in them sending orders out. As an example, there were a few mail order companies advertising *Carrier Command* in tape version for the Amstrad.

Yet we now know that this game is not being released for the 464 or tape machines at all. Yet these companies saw fit to advertise that the game was available for the 464. There must have been

many readers who took these companies at their word, sent them the cost of the tapes, and are still waiting for a product that doesn't exist.

Wouldn't it be better for all us readers if mail order companies were allowed to only advertise games they actually have in stock?"

Good point Mr Hall, and one I've been making for a long time. However, it's only fair to point out that there are both good and bad mail order suppliers. I bought all my CPC comms gear by mail order and had no trouble whatsoever. (Mind you, anyone who messed me about would soon find out they'd mixed with the wrong person.)

The thing is that mail order companies frequently have to advertise goods they don't neces-

sarily have in stock at that moment, because you simply don't know what you're going to sell out of once the ad has gone to press. I should know, after all, having run a successful little ceramics business for some time now.

What I don't agree with, however, is advertising goods which haven't yet been released, however difficult it is in the games market to know when products are *really* going to be out. For example, I would never have considered advertising my Colombian iconographs before I'd cleared the deal with my suppliers.

Rest assured, Mr Hall, that both I and the lads on *Amstrad Action* will be doing our damndest to clean up the mail-order scene.

The Show must go on!

Or must it? TRENTON WEBB elbows through the crowds at what may be the last PC Show we shall ever see...

Tense nervous headache? In need of a long rest? Then you're probably still recovering from the September's PC Show, the annual jamboree for computer people. The event where thousands of visitors, millions of monitors and positively trillions of PR people hawking their hardware fill Earls Court to bursting point.

This year's biggest surprise, however, didn't come from the new toys on display but from the show itself. If the rumours are correct, 1989 could well be the last year of the show in its present form. The two organisers, VNU and Montbuild, have fallen out, with Montbuild announcing its desire to pull out of the PC show and launch its own purely business/serious show next autumn – also at Earls Court.

Lawsuits are pending, and to compound the confusion EMAP – publisher of *The One*, *Ace*, *Commodore User* and *Sinclair User* – has announced plans for a European Computer Entertainment Show to be held in mid-September 1990. With all the major venues in London already booked for next autumn, a major sponsor missing and rival shows planned, the future looks bleak indeed. RIP PC Show!

Despite it all, this year's show was one of the busiest and liveliest ever. All the powerhouses in the CPC games world were present but there was a slightly disappointing turn-out from serious software and hardware manufacturers. Established firms such as Amnor and HiSoft were in attendance, but the newer companies on the whole shied away – possibly because of the multi-format, multi-purpose nature of the show.

Amstrad, the usual star of the show, took a back seat while others stole the limelight. Apple, for example, unveiled its new Macintosh portable in an uncharacteristic display of glitz. The new machine arrived movie-star-style at lunchtime on the first press day and was welcomed by an ungainly crush of journalists hungry for the first look.

For both games players and serious coders (or any mix of the two), the show provided the chance to get their hands on cut-price hardware and software. Disks were selling at £17.50 for ten and tape games for all formats were literally being given away, especially as the show wound down on Sunday evening.

Here now, then, is the AA guide to who was selling what and to whom at this year's PC Show.

Accolade was displaying its current projects for all formats. Two particularly noteworthy examples were *Jack Nicklaus Golf* and *The Duel*. The latter is a(nother) race game between two of the fastest cars ever to touch tarmac: the Ferrari F40 and Porsche 959. For the first full review see this month's *Action Test*...

Activision only put together a small stand this year,

mainly selling forthcoming games posters for charity. Arcade versions of some of its up and coming titles were on display, including *Fighting Soccer* and *Power Drift*. Its stall might have been tiny, but Activision did have a massive hospitality suite upstairs for the press. The lack of public preview material, it was claimed, was not intended to insult the punters, but was a gesture of dissatisfaction with the show's organisation.

Amstrad was more than furious with the recent totally unsubstantiated rumours of the CPC's demise. To prove the point there was a positive pride of CPCs on display, backed up with talk from the Amstrad boys about a new promotional campaign to push the CPC towards Christmas. The

focus of attention will be a TV tuner, so not only can you have the computing power of a CPC – the best 8-bit on the market – but also a personal TV. Bearing in mind how well the machine did last year without advertising support, the future looks rosy.

Codemasters didn't have a stand, but the team was eagerly wandering the halls accosting journalists with information about their new sister label *Cartoon Time*.

● *Power Drift*: Wheel-to-wheel action from Activision.

● Another Activision product on show was arcade conversion *Altered Beast*. Based on Greek myths, the graphics alone look set to make for a legendary game!

With a near 20% market share they feel that the only way to continue growing is to split themselves in two, attacking different areas – the sims and the cutes. The new label is launched on November 14, with *Ollie and Lissa III*, *Wizard Willy* and *Frankenstein Jr. Dizzy III* is being cooked up (chance would be a fine thing – ed!) right now by the Oliver Twins, and will be the main launch on the new label this Christmas.

CDS was more than keen to talk about its new mega-program *European Super League*. Yet another footie game, *Super League* aims to take a slightly different approach and become a 'graphic adventure in soccer'. It appears to have at last broken the mould of traditional management games and features an icon-driven system built within the on-screen pictures.

Dinamic was showing off its new game *After the War*. As usual the graphics look ridiculously good, but this post-apocalyptic arcade-style game may have too much gameplay and be too difficult if the opening stages of both *Army* and *Navy Moves* is anything to go by. Dinamic's stand looked a little lost, but judging by the first screen shots it looks as if its game will speak for itself!

Domark had one of the liveliest stands this year. *Hard Drivin'* machines were coming out of its ears and yet there still weren't enough to go round. If the public reaction to the conversion is anywhere near as positive, Domark has got a monster hit on its hands.

Also on view was *Toobin'*, one of Domark's forthcoming Tengen conversions. Again it looks as if the programmers have exacted every ounce of arcade accuracy from this most off-the-wall of games (you raft down famous rivers of the world fending off disaster by throwing coke cans!). Domark's made such an impression with Tengen that the twins have won the right for all the coin-op maker's future work.

The Edge still had little to show from its two Marvel comics licences *Punisher* and *X-Men*, despite its massive stall being decked out in all manner of comic book finer, and clips from the forthcoming *Punisher* movie running on the overhead video. And there were so many *Garfield* pictures you'd have thought it was *The Look*...

Elite and its *Encore* had possibly the dullest stand imaginable, running the cafe stall a close second for Least News of the Show Award. All

that they could muster was yet another rehash of their past glories in two more compilations, *Thrilltime 1* and *2*.

● Tintin – the Man with the Golden Quiff – out soon on the CPC from Infogrames.

Empire was continuing to bid for chart superiority by announcing even more releases and giving sneak glimpses of development work. *Gazza's Super Soccer* is nearing completion

especially the Marvel licence. Could it be that the expected driving game bonanza will fizzle out to be replaced by comic book heroes at the top of the Christmas charts? Empire was keen to stress the accuracy of *Dr Doom*, as the original game graphics were partially designed by the Marvel Comics artists themselves!

Grandslam was proudly touting its new licence acquisition *Space Harrier II*, a fact flashed on huge video screens. Its other current project is the much-vaunted and highly-envied *Liverpool* licence. To be brutally honest, the game on display was a bit ropey – but it was only a production mock up.

Continuing the soccer theme, *Saint and Greavsie* – a soccer trivia game – will be coming soon, but it wasn't a great success as an eye-catcher in a room full of flashing guns and bombs. Still if Grandslam can capture that particular brand of naff TV humour it may yet prove that even in the computer leisure trade there's room for this 'funny old game'.

Hewson's main attraction was its stunning new dragon logo, designed to give its games a greater impact on the shelf. The first CPC project to sport this new badge will be *Mazemania*, a sort of *Pac Man/Skweek* game that seems to have a harder edge – the poster shows a particularly gruesome, leering goblin. It should be finished in time for Christmas.

Infogrames' big boast of the show was its new licence *Tin Tin*. The cartoon detective looks set to blast off for the moon on one of his greatest adventures ever, with all his friends in tow – Captain Haddock, the Thompson Twins, Professor Calculus and Snowy. Again it seems that European companies are shying away from the traditional fodder of arcades and film licences favoured in the UK.

Interceptor, the budget games specialist, had two new sure-fire successes – if only on the basis of their names! *Saigon Combat Unit* manages to work Vietnam, the Army and fighting into one single title. It was good to see a budget company able to take such a prominent position at the show, especially as its games are all original and not re-releases.

Konix, the joystick king, was trying to steal the show's thunder by finally showing its Console/Home entertainment system – once rumoured to be on Amstrad's shopping list. Although the machine itself arrived a day late and was strictly off-limits, it was still quite a head-turner. The word on the street was once

and looks interesting. It will use a 'two view' system (from the side and in front of the goal) – let's hope the switching doesn't disrupt the gameplay.

Also on show were demos on various machines of *Wild Streets*, *Dr Doom's Revenge*

and *Team Yankee*. *Wild Streets* is a stunningly violent beat-em-up, with the heroic player being aided by a Rotweiler, of all things – which if nothing else should give the tabloids something to work with.

The other titles previously mentioned in *Amscene* also looked more than promising,

that Amstrad was backing this little baby, but the recent revelations about Mr Sugar's own plans for a console based around the 6128 have scotched this. Imagine a wedding of the two, though – a tried, trusted and powerful games system like the CPC's united with fun add-ons like hydraulic chairs, handlebars and steering wheels...

Microprose's legendary leader 'Wild' Bill Stealey was on hand to lead his troops into the fray this year. And judging by the gossip, Microprose's car game *Stunt Car Racer* proved one the biggest hits of the show. Unfortunately, the decision to convert the game to the CPC hasn't been made yet, so Amstrad owners make yourselves heard!

Mirrosoft apparently couldn't face the idea of the large crowds, and had a reception suite in a nearby hotel. A shame, as the company was showing off *Bloodwych* as well as some interesting non-CPC products (contradiction in terms, surely – ed). *Bloodwych* looks to set to break down the barriers between arcade adventures and traditional treasure hunts.

Ocean was in dominating form, and stole first prize for most memorable stand on show. A huge video wall ran clips from up and coming games and scenes from *Batman* and *The Untouchables*. Two huge American cars were the focal point of the display itself, even though no-one seemed quite sure why they were there! Being late '50s models, they were to late for the *Untouchables* and too early for *Batman*...

The Complete Chaos Award also went to the Manchester crowd – for its Arcade Alley. This was to showcase all the company's new licences in arcade form, but the trouble was fighting your way to the front of the queue. One of them was *Cabal*, a new shoot-em-up that has a floating on-screen cursor like *Operation Wolf* but shows your character on-screen too. Other good news from the Ocean stable and Virgin jointly is that the two-player gunfight will be available in a light gun version.

Rainbow Arts is returning to the CPC fold, and while its stand had little on display there was plenty being promised for later in the year. Rainbow Arts produces Amstrad software solely for export because of

the vast number of eager CPC gamers in France, Spain, Britain and the rest of Europe! The games it's planning to release will be here soon, spearheaded by *Spherical* and *X-Out*.

Tynesoft was awash with Eddie Murphy paraphernalia to promote *Beverly Hills Cop*.

Although it missed the boat as regards topicality, the very name Eddie Murphy will ensure success. Just think how bad *Best Defence* was, and that still made money on video! It will be interesting to see if the pace and humour of the movie can be translated into computer gaming. As yet there's no mention of how they're going to recreate Eddie's particular style of speech! (If you know what the *** I mean!)

UBI Soft has broken its long silence on the British scene and was previewing several products at the show. *Skateball*, *Puffy's Saga* and *Iron Lord* finally look set to appear (they

US Gold was in fine show form. On display was a shiny red Ferrari Testarossa to help hype *Turbo Out Run*, the sequel to *Out Run*. There was an arcade machine running and a high score competition, but despite what some thought the car wasn't the prize!

In fact that's what dominated the gigantic US Gold stand – row upon row of arcade machines showing off all their Capcom glory: *Forgotten Worlds*, *Vigilante*, *Ghouls and Ghosts*, to name but a few. The arcade machines that aroused the most interest, though, were those due for Christmas conversion. *Turbo Out Run* and *Ghouls and Goblins* were not the only wares on display, however. Upstairs the 'Gold team was eager to show off its other

new toys. Two new tank simulators were being talked about – *Track Attack* and *Heavy Metal – Pinball Magic* was hoping to out-score *Timescanner*, and most importantly *Skweek II* by French programming house Loricles was on display. If he can stop swearing, maybe he can get to number one this time!

New Advanced D & D title *Dragons of Flame* was being pushed with more freebies and glossy brochures than a person can stand, and has been definitely earmarked as a pre Christmas release. The odd one out was the *Moonwalker* conversion. The programming team has produced very pretty graphic roughs for display – but it remains to be seen whether it can inject any gameplay.

Virgin too had a large stand, taking the show by storm with its budget label for 16-bit machines retailing at a mere £5.

Its other major pull was the Sega section, which was inundated with requests for the new *S* magazine, a sister publication from Future.

On the whole, there was little CPC stuff on show, but promises of great things in the offing à la *Ninja Warriors*, and both of the *Double Dragons*.

With *Continental Circus* and *Shinobi* as openers, Virgin could hardly have asked for a better start to the games industry's silly

were first previewed last Christmas). *Skateball* is likely to be the first here, and is based on a future sport that combines the skill of football and the thrills of Rollerball.

season.

BrunWord 6128 £30

BrunWord 6128 is specially written for the Amstrad CPC6128. Months were spent just optimising the routines into their smallest, most efficient form. The result is the fastest, most convenient word processor for this computer, complete with the fastest spelling checker and a card filing programme for mail merging. Whether you are writing a few letters or a complete novel, you will find no better assistant than BrunWord.

The word processor, spelling checker and 30,000 word dictionary, are all loaded into memory by typing RUN "BRUNWORD". The disc drive is then completely free for your data disc.

All other word processors, even the ROM versions, need to access the programme disc to test the spelling. (ROM versions have the dictionary on disc). This is slow and can involve many disc changes. For example, Protext needed the disc to be changed eight times to check the spelling of our test file, whereas BrunWord needed no disc in the drive.

The 40 page BrunWord manual has several detailed examples, starting with step by step instructions to produce and print a simple letter. But your very first step is to load the TUTOR file into BrunWord. This takes even the complete novice straight into word processing and demonstrates the powerful editing and formatting features of BrunWord. There are also examples of printer control, showing how to create headings, to underline or to emphasise, and five deliberate spelling errors for you to correct. The tutor takes about 20 minutes to run through and after that you will feel confident to type in your own text.

BrunWord Features

*40, 80 or 128 column display *Touch typing speed over 200 words/min *True insert or overwrite *Justify or unjustify paragraph or whole text *Justified text has balanced appearance *Instant word wrap *Block save, move, copy, insert and delete *Local editing with word delete/undo *Adjustable margins and TABs *Column/Line/Page display with file name *True word count *Find and replace *Help menus *Memory filing system *Single character embedded printer commands (18 with 3 printer codes and 21 with 10 printer codes) *Page throw markers *Multiple copies *Odd/even page headers/footers with page numbers *Multi file printing (new page or continuous) *Print specified pages *Works with any printer *True display superscript and subscript numbers *User defined print characters *Load ASCII files from other word processors *Save ASCII files for other word processors *Files can be encrypted *Maximum file size about 9 pages of text.

BrunSpell Features

*Memory resident with word processor *Checks 4,000 words/min *30,000 word dictionary *No American spellings *Add up to 5,000 of your own words *Instant lookup *Helps to find correct spelling *Automatic correction.

DataFile Features

*Alphabetical, numerical, date sorting on any field *User defined headings *Search routine *Data merging into BrunWord *Label printing.

Comparisons

We have tested BrunWord 6128, Protext (disc) and Tasword 6128 with the same file of 3366 words.

BrunWord scrolled 40% faster than Protext which in turn scrolled 19% faster than Tasword.

Protext was the fastest to justify but needed a separate operation to see the result. BrunWord produced the best appearance of all three and was 30 times faster than Tasword.

Our simulated typing test reached 218 words per minute. Both BrunWord and Protext had no trouble at this speed but Tasword was very slow inserting text into the start of a paragraph and could only handle 16 words per minute.

The spelling test checked all 3366 words. BrunSpell took 52 seconds and needed no disc changes. Prospell took 6 min 24 sec and needed 8 disc changes. Taspell took 18 min 46 sec and needed 3 disc changes.

BrunWord Elite

Info-Script £50

A database without a word processor is like a car with square wheels. It gives an uncomfortable output. The engine is a very important part and some misguided enthusiasts might think THE most important but if that power cannot be coupled to a useful purpose then it has no point. The power of any database is in the saving, sorting, finding and displaying of the data but without a word processor to interface this data to the outside world, it is like having square wheels.

We have designed a database that uses many of the internal routines of our word processor, producing a very compact combination. This is the exciting concept of Info-Script. A comprehensive relational database integrated with a powerful word processor, giving total flexibility to the way that the data is printed. A fast, friendly combination that has great depth of power.

100 Letters £15

This is a utility for use with Info-Script, enabling pre-written letters to be easily selected and personalised. It is supplied with a library of over 50 letters to give you a starting point for some of those tricky letters. You see just the right job advertised and need guidance on writing the letter and the format of your CV. Or you need to write a letter to instruct your bank to change a standing order. There is a pattern for each of these and many more. The manual takes you easily into writing these letters and explains in simple terms how to create your own letters patterns. The library can easily be expanded to 100 letters but there is no limit.

BrunWord Upgrade

Send your BrunWord 6128 disc, BrunWord manual (not the packing) and a cheque for £22.00. We will record Info-Script, test the disc and return with a new manual.

Letters

I am extremely interested in the sound of your Info-Script. However, as the cost is £50 I am somewhat hesitant in purchasing and would therefore be grateful for any further literature. I am presently using Protext on ROM with Promerge and Pro-filer, but accessing Pro-filer is incredibly slow and long winded. Your advert would indicate that access time to stored data is much superior.

Mr G (Nottingham).

Thank you for my recent copy of Info-Script. My euphoria has nearly died down now - it is superb. It is a big improvement on my Protext and Pro-filer in that it combines the two with vastly superior speed and is exactly what I need.

Mr G (Nottingham).

May I take this opportunity to express my appreciation of BrunWord. My son has been the main user. After years of torture in school with pen in hand, the use of the word processor enabled him for the first time to concentrate upon the substance of what he wanted to write, and return later to correct and organise. The net result is that a young man who formally struggled at school and hated it, now accomplishes the written components of his course with ease and satisfaction.

Mr G (Sutton Coldfield).

I have found it (BrunWord) a very easy word processor to use, and the more I use it the more I like it. The same goes for Info-Script, the more I use it the easier and more flexible it becomes.

Mr L (Australia).

BrunWord Elite £90

Our original aim in designing this programme was to produce a fast desk top publisher with very good quality printing and a memory resident spelling checker. A few jottings on a scrap of paper revealed that two 256K memory expansions would be needed and that even then it would be far too slow. BrunWord Elite is our solution to this dilemma and runs on an unexpanded CPC6128 (or CPC464 + disc + 64K). It starts by assuming that the printer knows best how to print and provides only a controlling hand, to help choose the best compromise. It follows that the best results are achieved with the best printers.

The text is typed (or loaded) into the editor with no regard for the final layout. It is edited and spell checked using all the normal features and speed of BrunWord 6128. When this is done, a set of layout commands are placed at the start of the text. With these commands the text can be printed anywhere and everywhere on a sheet, just so long as the facilities used are available with your printer. Boxes and line can be drawn and different fonts can be downloaded to print in different type faces.

The idea is that the user will create several page layout patterns (or use the ones supplied) and then only need to worry about typing and editing the text. The screen will not show the actual layout, if it did it would be painfully slow and would not achieve the ultimate quality.

BrunWord Elite has all the features of BrunWord 6128 (except encryption), all the features of Info-Script and seven 24 pin fonts (four fonts in different sizes). It is supplied with a printer lead and an 8 bit printer status port which allows the programme to interrogate the printer. Printer OFF, No Paper, OFF Line, ON Line are the status messages that keep you informed dynamically of the current printer condition.

BrunWord Elite works with any Epson compatible printer, which means ALL modern dot matrix printers. At the bottom end, even the simplest 9 pin printer will be able to print in up to six columns. If the printer has IBM codes (as well) then simple lines and boxes can be drawn, and if the printer has reverse line feed, then text can be printed anywhere and everywhere on a page.

At the top end a 24 pin printer will be able to use the fonts supplied with the programme, print boxes and lines by specifying size and line thickness, and use micro justification with proportional text.

BrunWord Elite printed this advertisement, except for the layout around the teddy. The text, lines and price list were printed on an A3 sheet, then the teddy and address layout were pasted on and the sheet was photographically reduced to A4. (The large heading had extra help). We would have difficulty explaining to a third party how to lay out an advertisement of this complexity. As it was, it was just one days work to write the new words and produce the camera ready copy. Compare this to our previous advertisement to see all the changes. Section have been re-written, moved and then tailored to fit the columns by changing the font size and fine tuning the line spacing.

BrunWord Elite is now ready but we expect demand to exceed supply in the first few months.

Programmers' heaven?

NIRVANA

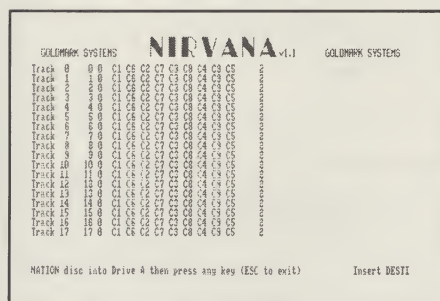

Goldmark Systems • £15 disk, £26 ROM
• Tel: 0707 271529

Goldmark Systems has produced copier/editor/archiver that promises much. But does it deliver? ADAM WARING finds out...

Since the introduction of the recent copyright act, Goldmark Systems has dropped its more dedicated 'cracking' utilities, and is pitching its hopes on *Nirvana*, a powerful disk management program with a multitude of features.

Nirvana is still capable of backing up commercially protected software, but instead of making a song and dance about this legally dubious capability, it's mentioned almost as if it's an undesirable side-effect. Goldmark is juggling a hot potato. *Nirvana* has to be able to copy commercial stuff – everyone copies something at one time or another, even if it is for legitimate back up purposes – but Goldmark also has to be seen as obeying the new regulations.

The program has been on sale for some time, but the revamped package now includes various sector and directory editors, as well as an archiver program. On loading, you are presented with a menu listing the seven options. The first being the original *Nirvana* program itself, followed by the additional bolt-on utilities.

● The Disk Copier

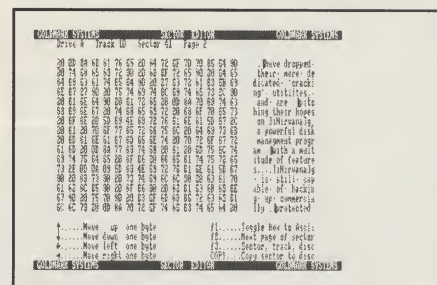

The *Nirvana* option is the guts of the package. All the copying, formatting, erasing, renaming and similar disk operations are handled here. The main area of the screen shows a list of all the files on the disk – it's a kind of super-catalogue, with additional information about file attributes and user numbers. A small section at the bottom of the screen shows a

line of system status containing such valuable information as free disk space, number of files selected and the disk format type. Below this is a list of available commands, easily accessible with single keystrokes.

The cursor is moved around the top section of the screen by means of the cursor keys. Files are selected and de-selected with the copy key. Multiple selection is easy, allowing many files to be operated on at once.

Files can be copied singly or in groups. A group of files are copied into memory *en masse*, and then dumped onto the source disk, saving a lot of tedious disk swapping.

The disk copy option is very powerful. It will handle all types of weird formats, corrupted sectors and the like. Although this could be

● Hacker's delight – the Disk Editor itself.

Three programs of the type that make the hackers' knees tremble with delight are also included on the disk. A directory editor lets you recover unerased files (and overlaps some-

what with the functions of the main package). The disk map displays some meaningless (apparently) information about what tracks and sectors your files are stored on. The sector editor is best of all. This lets you rip apart programs, hunt for the infinite lives pokes, find the obscene messages that programmers invariably leave behind, stick your name all over the high score table and change US Gold to UK Mould.

The most useful addition to the package is the Archive option. This works in much the same way as a hard disk back-up onto a tape streamer. The whole disk can be backed up onto tape to be retrieved at a

later date. This fantastic option offers a cheap mass backup storage system on ordinary audio cassettes, which can be filed away and forgotten about until the worst happens and your disk gets trashed.

It takes a fair amount of time to archive a whole disk to tape – about a quarter of an hour or so to be exact – but that isn't bad when you consider that there's 180K or so of data being saved.

Thankfully, all you need to do is insert the disk and set the tape to record. The machine will do the rest for you, so you're free to make a cup of tea, have a bath, go out for a night on the town etc, whilst the whole operation is taken care of.

On the whole, *Nirvana* is easy to use and has some neat features. Against that, however, you get the impression that the whole thing has been botched together. These minor grumbles aside, it's an excellent package.

GOLDMARK SYSTEMS **NIRVANA** v1.1 GOLDMARK SYSTEMS

The Ultimate Disc Management Suite

Insert SOURCE disc into Drive A then press any key (ESC to exit)

● Nirvana is an invaluable tool for the dedicated meddler.

used to pirate games, it's also very useful if you corrupt a disk and want to mess around trying to retrieve the data without causing further damage to the original. A valuable feature for 128k users is that any additional memory available is used by the utility to increase the storage capacity for the data being copied. This means only having to swap the disk over two or three times.

The disk formatter is extremely fast, only taking about 18 seconds – much faster than the standard CP/M utility. Disks can be formatted to both data and vendor formats.

Group erasure and renaming becomes a doddle. Files are selected and, in the case of Rename, the appended filenames are entered – then the task is undertaken by the program. File attributes are allocated with equal ease, and can be toggled from read/write to read only, and can be made invisible to the catalogue.

RSX-LIB

£19.95 disk only

Smogware Systems • 20 Grove Avenue, New Costessy, Norwich, Norfolk NR5 0HN

Accessing machine code routines from a BASIC program isn't exactly the easiest of tasks, having to memorise all those meaningless hex addresses with which to call the programs – one teeny mistake and it's mega crash time.

Resident System eXtensions – RSXs for short – provide part of the answer, in that routines can be given user-friendly names that mere mortals can understand. The machine code routine is called by typing the routine name with a ! prefix. !FADE is far more understandable and readable

LISTING

RSX-Lib Converts code like this into easily accessible RSXs.

than CALL &8D6C. All that's needed is someone to write these things in the first place. Unfortunately from a machine code programmer's point of view, RSXs can be a real pain in the assembler. Address tables of a complexity previously unheard of need to be defined, and besides, unless specially designed to do so, different routines are likely to occupy the same area of memory, making it impossible to install several at once.

Smogware Systems may have the answer in the form of RSX-LIB, a utility that lets you put together a collection of RSXs from ordinary machine code routines. In addition, it will relocate the different routines in a neat, orderly fashion, resulting in a personalised selection of routines in one file that can be called as required.

Fifty or so ready-made RSXs are included on the disk, but they consist mostly of standard system calls and are nothing to get excited about.

To test the program we wrote five simple routines on *Pyradev*, assembled them, and called them from BASIC in the usual manner to prove they worked. Once everything was hunky-dory, we loaded RSX-LIB and began to get them ready for compilation.

The first thing to be done was to add information about the routines to the library. This is where we encountered the first problem. RSX-LIB will only compile information about one RSX at a time, not in groups. The object code of our five routines was stored in sequence in one file, and had to be split up before the program would handle it. Once this was done, we could successfully add them to the library.

After adding each entry the program exited back to the main menu, which made entering the five codings a bit tedious. Added to this, the program was quite slow, with the user having to wait for the program to catch up while it was drawing screens.

Once all the details are safely in the library then it's time to put the group of RSXs into a file. A list of all the available RSXs is displayed, along with which disk to find them on. The five we had written were selected and the program made to do its stuff. A file was created and the start up sequence was advised – a line of BASIC used to load and initialise the RSXs:

```
MEMORY HIMEM-233:LOAD
"aa.rsx",HIMEM+1:CALL HIMEM+19
```

RSX-LIB was exited, and our RSX file loaded and initialised. With bated breath

GOOD NEWS

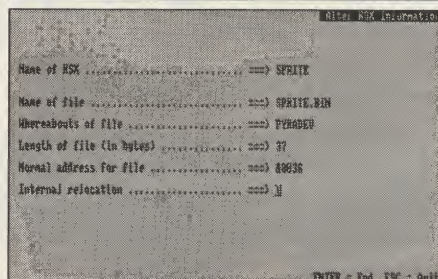

- Does what it sets out to extremely well.
- Easy to use.

BAD NEWS

- A touch more speed wouldn't go amiss.
- Routines must be compiled one at a time.

● The main menu.

● Entering details of the code into the library.

● Selecting a batch of files to assemble.

and shaking hands we nervously typed !invert...

Success! all our routines worked a treat. Instead of all those horrid addresses to remember, we could call our routines at the drop of a word. Spurred on we assembled the routines all at the same address to see if that would fool it. It didn't even flinch, creating a file exactly the same as before. The manual states that most routines can be re-located, although it may have trouble with particularly complex routines.

RSX-LIB is great if you program in any way shape or form. If you're a coder then it makes creating RSXs a dream. If you're more of a BASIC (and down to earth) sort of person, and you want to use routines published in type-ins and the like, then you'll be equally well suited.

RSX-LIB (1.0)

```

• This tiny listing is all that's needed to produce the *Pac-man* demo.

• Knock-out! The oldest game of all re-created with *Sprites Alive*.

• Pac-mania! A basic framework of the Atari classic is included.

extra commands designed to make the inclusion of animated graphics and all things spritely a doddle for the BASIC programmer.

Sprites Alive gives you around 70 extra commands to use from BASIC. The firmware's built-in RSXs are used to execute the extra instructions, meaning that they are accessed with simple keywords rather than complicated calls. Up to 64 multi-coloured sprites can be on-screen at once, and can all be animated and moved with automatic collision detection.

Six fairly average demos are included on the disk. These are intended to demonstrate the different aspects of the program, rather than making any claims of being Mastergame status. They are best put to use by hacking into them with the intention of examining and experimenting with the commands to learn their usage. The two most interesting are partially complete games, which can be amended and improved to make custom games of *Breakout* and *Pac-Man*.

The manual is a pretty hard slog to get through. After a couple of pages by the way of introduction, it launches straight into the nitty-gritty business of explaining the complicated instructions. A tutorial approach would have been the preferred method, guiding the reader gently through examples with the technical explanations in a reference section. No matter though, it was a struggle, but we got there in the end.

You're faced with a chicken and egg situation when sitting down to write your first program. The package requires that you draw out

CATCHING UP

Pandora is the direct competition, and it goes about solving the same problem in a different way. Whereas *Sprites Alive* uses RSXs to invoke the extra commands, *Pandora* has its own cut-down compiled BASIC, giving your programs greater speed, but not as much flexibility. Glenco is presently working on a compiler (34.95) to work with *Sprites Alive*, thus catching up speed-wise whilst retaining the flexibility advantage.

The company also plans to sell a cut-down package with all the RSXs cut out for machine code programmers to incorporate the code directly.

the sprites before you can start writing your masterpiece, but without having any experience of using the package you don't really have a clear idea of the graphics you're going to need. Besides, you don't want to bother with all that tedious messing about designing sprites, you want to get on with the serious business of writing your mega-game. The compromise is to start with one of the demos, borrowing its sprites and changing the listing till it becomes almost all your own work.

It's when you do this that you realise just how powerful *Sprites Alive* really is. A relatively short BASIC listing produces a great deal of action. Most of the processing is handled by the extra commands, with your BASIC program just serving as a means of linking them together.

You won't be able to write anything of commercial quality with *Sprites Alive*. It's a bit too limited and slow for that. You could have great fun designing games to baffle your pals with though, but a good amount of programming know-how is required, as you firstly need to be competent in BASIC, and secondly some of the programming structures used are quite complicated.

GOOD NEWS

- Very powerful
- Reasonably priced

BAD NEWS

- It won't produce stunning games
- Not lightning-fast

3.5" DISC DRIVE FOR THE CPC

SPECIAL OFFER....SAVE £15 ON ALL DRIVES

MEGADRIVES

The SIREN MEGADrive offers exceptional value to users who have a need for more on line disc storage than is normally offered by Amstrad's own 3 inch drive. The MEGADRIVES are 1 inch high 3.5 inch low power consumption citizen drives. They are contained in a steel case and come complete with power supply and a cable to attach to the computer. The drives are 80 track double sided and will format up to 850k. In order to make full use of the drive, it is essential to have some software to allow the drive to be recognised. We offer 3 packages, ROMDOS, RAMDOS & RODOS. Please phone for further details if needed.

ROMDOS & RAMDOS

These two programs are essentially the same, the only difference being that ROMDOS is supplied on ROM (and needs to be fitted into a rom board) and RAMDOS is supplied on disc. Both programs will support AMSDOS, CPM 2.2 and CPM PLUS and is very simple to use. If you are using RAMDOS then a short program must be run before you can access the MEGADrive. With ROMDOS, the computer is configured when it is switched on. Files can be copied to and from the MEGADrive with the CPM PIP program. Both programs come with formatting software and full instructions.

ROMDOS is available on its own at **£29.99**.

RAMDOS is **£19.99** & RODOS is **£29.99**

With RODOS and RODOS EXTRA, it is possible to transfer files to and from an AMSTRAD/IBM PC or ATARI ST.

Please phone for further details.

Siren Software

**84-86 Princess Street
Manchester M1 6NG.

SEND TO:- Siren Software, 84-86 Princess Street, Manchester, M1 6NG.

RODOS

RODOS is supplied on ROM (and needs to be inserted into a ROM board) and offers many unique features to the CPC user. It will automatically configure drive B on switch on, it offers a silicon disc & printer spooler (6128 only), upto 3 times faster disc accessing, tree directories, disc formatter and file copier. RODOS fully supports AMSDOS, but will not work with CPM 2.2 or CPM PLUS. RODOS is ideal for the experienced user, however if it is just a large capacity second drive that you need, we recommend ROMDOS or RAM-

FORUM

Got a problem? ADAM WARING's your man.

●You can talk

Owners of the DK 'Tronics Speech Synthesizer will know that the manual tends to avoid the subject of speech output from machine code. It mentions the use of I/O address &FBFE, but there is an easier way to do this using a short assembly listing.

```

ORG      &6000
LD        DE,MESS
LOOP     LD        A,(DE)
          OR        A
          RET       Z
          CALL     &BB5A
          INC      DE
          JP       LOOP
MESS     TEXT     "' text here '",0
    
```

Pressing SHIFT and '7' gets the apostrophe ('), which should be used both at the beginning and end of the string. The '0' at the end terminates the message.

Would you let other readers know that if they have problems with any aspects of computing (except electronics!) then I would be glad to help them if possible.

Andrew Price
Dunstable

Well done that man! I am passing your full address over to appear in next month's Helpline.

●Printer choice

I own an Amstrad CPC464 which I use mostly for games, but would like to use for letter writing. What printer would you suggest I buy in the £100-£200 price range? I will also need a word processor. Is Mini Office any good, and is it compatible with your recommend printer?

M Mitchell
Welwyn

I agree - from the look of your handwriting you do need a word processor! The buyers guide towards the back of AA lists several recommended printers that we have reviewed. In particular you should look at the Citizen 120D, the Panasonic KXP1081, the Mannesmann Tally MT81 and the Star LC10. All are propriety brand products, and can be bought for less than the manufacturers' RRP's. Rummage through the pages of our sister publication New Computer Express to find them advertised at truly knock-down prices. Mini Office should fill your needs admirably. It includes a whole suite of programs in addition to the

Light Pen by Electric Studio (462 420222) is what you need. For £19.95 you get an excellent utility which will produce the screen dumps you require, and comes with the bonus of a light pen to aid your artistic ability.

●Erase

I own a Multiface 2, and I recently saved a tape onto disk using it. It was, however, a faulty tape load, and CPM doesn't recognise the file as it doesn't have an extension ending the filename. Therefore I can't erase it, and have a 60K plus rendered useless on my disk. How can I erase these files?

Hugh O'Conner
Dublin

word processor, and is a bargain at £14.95 on tape.

●Pressing the big red button

My son, Farhan, has a CPC 6128, cassette recorder and Multiface 2. When he presses the red button on the Multiface he says that the menu comes up properly, but the cassette motor automatically switches on, which he thinks should not happen.

Is there a solution to this, or is it just a bug in the Multiface?

Jenny Masini
York

How bizarre. Sounds like some kind of edge connector problem. Try cleaning the edge connector with methylated spirits. If that doesn't fix it, and nothing else untoward happens, then I wouldn't worry about it.

●Light entertainment

I own a CPC464 with built-in cassette and have a great interest in art software. I've been trying to get hold of an art package on cassette that can be printer dumped, but have ended up at a dead end. What has happened to the world of cassette software?

S J Goodfield
Portsmouth

Your best bet is to copy the remaining working files onto another disk, and reformat the original. It's possible that you could retrieve the space using a disk editor, but I would recommend that you always back up a disk before tinkering with disk sectors.

●Rotten cheat

I am writing to offer my help on improving Easi-Sheet given free on the 4th birthday tape. If you type 3390 RETURN and save it, you will avoid the error checking routine at the beginning. Also, there is a bit of a bug in the routine called when pressing TAB. This can be rectified by typing 800 GOTO 2780.

The Daleks game, also on the free tape, can be made easier by having infinite Sonic Screwdrivers. Type 1280 RETURN.

James Griffiths
Dyfed

Not only would infinite screwdrivers make the game easier, it would make it utterly pointless!

●I shudder to think

I would be grateful if you could offer some advice on using an Epson LX-800 printer with my 6128. The printer's demonstration mode is satisfactory, but I cannot get the computer to communicate with it. Sending a print command through TasWord gives the Epson a slight shudder, but so far no text.

I Looker
Dorset

Strangely enough, poor old Trenton had the same problem this very morning. The silly duffer was using a broken printer cable. Firstly, make sure that the CPC end of the cable is connected the right way round - you won't do any damage if you put it in the wrong side up, so try it. If that doesn't bring any joy then you'll have to get yourself another cable.

TASWORD 6128

The Word Processor - with Mail Merge

The established, powerful word processor for the Amstrad CPC 6128. TASWORD 6128 has been specially developed to use 64K of memory as text space. This means a text file can be a massive 60,000 characters long, enough room for over 10,000 words! Featuring all standard and many extra word processing facilities TASWORD 6128 includes sophisticated print options, on-screen help, notepads and a built-in data merge facility. Extensive customisation options allow many facilities to be changed to your requirements and then saved into the program. Combining power with ease of use, TASWORD 6128 is the complete word processor for the CPC 6128.

●Saving face

On reading last month's *Forum* (AA50), I noticed a tip from Hugh Gammon giving instructions on how to save only the first 64K of memory when saving a game through Multiface. In my experience there is no need to go into 'Tool Kit' mode, all that is required is to press the 'clear' command and save straight away.

J Regan
Spaling

I hope that clears thing up!

●Assembly time

Which assembler do you advise me to get? At the moment I am using RAW, but quite simply, it's useless. I don't know whether it is my version but it can't handle anything to do with IX, IY, and the OUT commands. It even occasionally throws a wobbly at a label. As you can see, a new assembler would do nicely. It would be nice if it could cope with the hidden instructions.

How much would it cost to fix a DD1 and monitor? The drive clanks and the monitor has squiggly lines over the screen.

Paul Reilly
Glasgow

The PDS assembler is an extremely powerful system with an extensive monitor and fast assembly time – typically less than ten seconds. In addition to the £500 price tag, you will also need a small add-on called an IBM PC. Slightly cheaper is Maxam II, which should meet all your requirements.

I have no idea how much it would cost to mend your equipment. Why don't you try getting a quote from a computer repair shop?

●Cutting remark

Regarding the "Between the lines" article in AA50, if you're a Protext user and you have this problem, but don't want to cut up your cable, then here is a less 'dangerous' solution.

Get into command mode, type "sp", press enter twice, type "Y", hold down control and press "j", and finally press 0 followed by RETURN. You have just redefined the control j character, which will clear up the double spacing problem.

Edward Hieatt
Cambridge

Thanks Edward. Users should note that this will only work from Protext. BASIC and other applications will still produce the double lines.

●Joining the Elite

Thank you very much for the splendid article on *Tasword*. It was a great help to a novice like myself and I thoroughly enjoyed customising the program. One thing I would like more advice on is how to automatically produce letters in elite type. Tom mentions that it is possi-

ble but doesn't explain how.

Talking of *Elite*, can you offer any help any newcomers like me who have bought the game on the supreme challenge disk. Unfortunately your cheat pokes do not work for this version as it has a different loader. Are any of your readers able to oblige – if not I doubt that I'll ever progress beyond pathetic!

John Marsh
Orpington

I believe the second part of Tom's article – which appears elsewhere in the magazine this month – covers your first query.

Calling all Elite Clubbers... Commander Marsh in distress...

●Fast loader

I am having problems with my cassette unit.

Games like *Purple Saturn Day*, *Gauntlet* and many others sound 'fast' when you listen to them and won't load on my 464. I get either read error b, or the game won't identify itself at all. Is my cassette motor too fast? Can I mend it myself or should I get a repair company to fix it for me?

Adam Nenwick
Scarborough

It sounds like one of two possibilities to me. Hopefully your machine has dirty heads or is misaligned. Tapes saved normally would perhaps load, but fast loaders (hence the strange sound) would be less tolerant. Clean the heads as shown in AA50. The alignment can be adjusted by using a watchmaker's screwdriver inserted into the small hole on the top of the unit (near where the cassette door opens). Rotate the tiny screw a fraction of a turn with a tape playing until the sound is better.

The other possibility is that your tape recorder is in fact broken. It may be that the rubber drive band has become worn, in which case you'll need a replacement and a few hours with a screwdriver. If the problem is one you can't deal with yourself, then any local radio repair shop should be able to do the trick, with it being the cassette mechanism rather than the computer itself.

●Any colour but green

I want to purchase a colour monitor for my CPC. At present I have a green screen, but find it difficult to play certain games on it. Can you offer me any advice on what to do?

Martin Van
Chelmsford

The CPC will work with most of the standard RGB monitors. The problem is that it takes the power directly from the monitor, so you'll

either have to keep the green screen plugged in for the power, or get a separate power supply. Amstrad's MP2 modulator has a built-in power supply which you could use in conjunction with the monitor, but if you want the colour just for playing games with, the why not use the modulator with a TV set?

●No escape

Is it possible to disable single keys such as ESC to prevent people getting listings from your programs that you don't want copying?

Robin Marlowe
Chepstow

There is probably a poke somewhere or other to disable the escape key, which I've know doubt that one of our ever helpful readers can supply. In the meantime, you can protect your BASIC programs by saving them with a protected loader. This doesn't actually disable the key, but clears the program from memory when it's pressed, having much the same effect in preventing people listing the program. Save your BASIC program with:

`SAVE"filename",p`

●Remote possibilities

I am trying to get my 6128 to control external circuits (switching lights and motors on and off for preset periods).

I could do this by connecting the remote switch through a suitable relay, but I can't get the remote to work other than by "pressing any key" after a tape cat or play command. Is there any way I can bypass this stage from within the program?

I am trying to record some of my computer pictures on video tape via the MP2 modulator using RF output. Although the TV picture is fine, the recorded picture quality is terrible. Can you suggest anything? My VCR has only RF and BNC video-in connections.

M Pike
Portsmouth

The remote port is controlled from I/O port &F600. Use OUT &F600,16 to switch it on, and OUT &F600,0 to switch it off.

As for your other problem, I can offer the reason, but not the solution. The modulator turns the nice clean RGB signal into a form the TV can understand, and your video recorder turns that signal into composite video to be recorded on the tape. When you play it back it is again converted from composite video to RF, so the computer's display is going through several processes, losing quali-

ty each time. What you need to do is mix the RGB directly into composite video, but I don't know if anything is available to do this. Perhaps someone can help?

●A picture's worth a thousand words

I would be grateful if you could tell me how to load screens drawn on an art package without the loading message appearing on top of it.

Simon Cartwright
Workshop

Pictures can be loaded from BASIC without corrupting the screen by putting an exclamation mark at the beginning of the string. For example, if your drawing was called "SCREEN.SCR" you would load it with:

LOAD"!SCREEN.SCR",&C000

●Speak my language

Certain listings appearing in *Type-ins* incorporate commands such as 'GRAPHICS PEN 1' or 'FILL 1', which my computer doesn't make any sense of. Could you please tell me what's going wrong?

Paul Nicholls
Hailsham

Using my brilliant deductive powers, I can tell that the computer you have is – let me see now – a 464. The 6128 has an upgraded ROM containing a few more BASIC instructions than its predecessor. Listings with limitations as to what machines they will run in are now marked in the *Type-ins* section.

●The sixty-four thousand byte question

I have an Amstrad CPC464 and would like to know whether games such as *Dragon Ninja* and *Target Renegade* will load all the code in one go if I upgrade my machine with a DK'tronics 64K ram-pack?

If not, how do I upgrade my machine to be compatible with a 6128?

Ian Fisher
Weymouth

Generally yes, it will work with most commercial software. It depends on how much the software involved 'follows the rules', and a few games may not work. Add a 6128 ROM (contact CPC – 0722 555034) in addition to the 64K memory for full compatibility.

●A load of errors

I have a CPC464 that I have had for three years and have bought quite a few games for, but now I am finding that some new games don't load on my computer, although they will on my

friend's more modern 464. I was wondering whether it was possible that Amstrad have incorporated other commands into newer models of the machine.

P Rainbow
Sheffield

Internally your friend's machine will be exactly the same as yours. The problem is more likely to be three years' worth of grime accumulating on the tape heads. Give them a good cleaning as shown in last month's issue (AA50).

●Hack attack

Whilst hacking away at *Shinobi* the other day I came across something rather interesting. Hidden away at location &4270 is a rather long text message. So, if you have a *Multiface* and *The Insider*, do the following:

Load up *Shinobi*. When the title page comes up, insert *The Insider* into drive A and press the red button. Select TEXT and enter the address as 4270 HEX.

The message occupies the area of memory set aside for the levels, so make sure you do this before they are loaded.

Stephen Trimmer

●Subject to status

After continually fooling around with my computer I have found out some information that may be of use to your readers.

When a file is set to read only status the file can't be erased, but do you know how it works? Well I do!

The first byte in the filename extension has &80 added to it. For instance, the filename 'FIND.COM' would have the &80 added to the 'C', signifying read-only. Similarly, a file set to system status – making it invisible to the directory – adds &80 to the second letter, in this case the 'O'.

CP/M has a command called STAT, which is very useful in file doctoring. You can use this utility to examine the files and change them as you wish.

Andrew Price
Dunstable

The present status, Andrew, is that £10 will be winging its way to you shortly.

Bourton Grange

Any other readers discovered interesting hacks?

●MIDI mayhem

I know that the sound output from the I/O port can be enhanced by connecting it through a hi-fi, but is it possible to make something that could turn the signal from the port into a signal suitable for a MIDI-compatible keyboard?

J Carrigan
Horsham

No. The I/O port is only capable of outputting analogue sound signals. MIDI, on the other hand is a digital system, sending instructions and information about sound rather than the sounds themselves. To use MIDI from the CPC you will need to buy an interface that plugs into the expansion port. See *Mastering Midi* in last month's issue (AA50) for more information.

●Spectrum conversion

My kids have twisted my arm and I'm committed to retirement of the Spectrum in favour of an Amstrad CPC.

As a hard-up dad I should like to know whether the Speccy tapes can be put onto disk for use on the Amstrad.

F Chesters
Brampton

Firstly, congratulations on your decision to get a CPC. It's a great machine which beats the Spectrum hands down.

The bad news is that it won't load Spectrum software. The two machines use a totally different way of reading programs from tape, and besides, Spectrum software is not designed to take advantage of the CPC's far superior capabilities.

●The Modulator approach

I'm confused. I am thinking of buying a modulator for my CPC464. In the manual it says that I need to use the MP1 modulator. I've looked at all the advertistments in your magazine, but have only seen advertising for the MP2 modulator. Is it possible to use the MP2 instead of the MP1 on the 464?

Stuart MacNeill
Argyll

The MP2 is an upgraded version of the MP1 modulator, designed to work with the 6128. The only difference between the two is that the MP2 has an extra 12 volt output to power the 6128's disk drive. Your 464 doesn't need this, but will work with the MP2 without any problems.

The Game Creator

Blow the Lid off your Micro!

The highly acclaimed program creator now gets even better!

Pandora has been greeted as a breakthrough in program development. It was specially written to drive the CPC's unique features to the limits, and now incorporates many new functions suggested by enthusiastic owners.

Here are some of the power-packed features from version 1.00

- Uses simple Basic commands
- Needs no knowledge of assembler
- Up to 48 standard or animated sprites
- Automatic animation and movement of sprites
- Super fast multi-featured sprite editor
- Compiles to stand-alone programs
- Can compile to memory for quick debugging
- Works with Basic or all wordprocessors that produce Ascii files
- Can compile directly from Protext memory
- Extensive graphics and sound facilities
- Comprehensive manual with examples
- Several demonstrations and working games included
- You can sell programs written with Pandora

But that's just for starters. Remember that Pandora is unique in that it has the features YOU want. At the request of many delighted owners, the latest version is now supplied with the following extras:

- Local variables
- Facility to call machine code routines
- Load files anywhere in memory
- Load and save sound envelopes
- Hex constants supported
- Simple use of logical operators
- Nested "FOR-NEXT" loops
- Even more flexible sprite editor

£14.95
Tape

£19.95
Disc

Because Pandora is evolving all the time, we'll keep you up to date with enhancements, and for just £4.95 you'll be able to upgrade to the latest version! Also including the new version 2.00 due out in November and featuring numerous new enhancements.

Order your copy today and very shortly you'll be writing your own professional games in a fraction of the usual time, and without the fuss.

What the Press say

"This could be the start of something big" - New Computer Express, June 1989
 "Easy to use sprite editor... Commands which any Basic programmer will understand... Writing your own games on the CPC has never been easier" - Amstrad User Club Newsletter, July 1989.
 "You'd be astonished at what you can do with Pandora... The sprite handling offers exciting possibilities to the games writer... Pandora's advantage is its superior flexibility... looks like becoming an important addition to the CPC software catalogue" - Amstrad Action, August 1989.

Cracking the code

Starting this month: a new series on advanced machine code. **MICHAEL GLEDHILL** takes over where **RICHARD MONTEIRO** left off, and extols the virtues of tables of values...

Judging by the content of *Cheat Mode*, *Type Ins*, *Forum* etc, it seems like many readers have taken the plunge and learned machine code. But once you've learned the basics, what then?

Well, before you jump into a 40K multi-mode, multicoloured super-game, consider an alternative. Get some experience.

This series is designed to follow on from *Absolute Beginners*, and, if there is enough positive feedback from it, will go all the way to demonstrating how to write a full-length program without using firmware calls.

Don't, however, expect this series to teach you machine code from scratch. AA ran a beginners' series - *First Bytes* - which ran from AA28 to AA43, and rather than re-covering old ground, we're going to leave you to buy those AAs from the fabulous *Special Offers* pages at the back of the mag...

Turning the tables

Firstly, you should get used to using tables of values. These can be used to get much faster routines out of your humble CPC.

As an example, how would you go about plotting the top right hand pixel in pen 1, regardless of which mode you're in? In all three modes, &C04F will need to be poked, assuming the screen hasn't been scrolled, but with &40 in mode 0, &10 in mode 1, and &01 in mode 2. The following routine will do this.

```
CALL &BC11 ;Put the screen mode in A
LD HL,&C04F ;Address to poke
CP 0
JR Z,prog1 ;If it's mode 0, jump to prog1
CP 1
JR Z,prog2 ;If it's mode 1, jump to prog2
CP 2
JR Z,prog3 ;If it's mode 2, jump to prog3
RET
prog1: LD (HL),&40
RET
prog2: LD (HL),&10
RET
prog3: LD (HL),&01
RET
```

It works, granted, but can it be improved upon? Compare this listing...

```
CALL &BC11 ; First load A with screen mode
LD E,A
LD D,&0 ; Then make DE hold screen mode
LD HL,table
ADD HL,DE ; Now HL=table+screen mode
LD A,(HL) ; Read byte from HL..
LD (&C04F),A ; ..and poke &C04F with it.
RET
table: DB &40,&10,&01
```

This program sets up HL to store the address of the first data byte (&40), and adds a displacement of (screen mode) bytes to HL to ensure HL accesses the correct byte.

In mode 0, the byte at (table+0) is accessed, in mode 1, the byte at (table+1) is accessed and in mode 2, (table+2) is accessed.

This may appear more confusing than the first program, but one good programming tip is to always try to keep to one "execution path", rather than jumping to various routines - this will usually speed up the final execution time.

The correct address

The program above is of very little use, though, so let's try a better example - calculating the screen address of the top left hand corner of a cursor position.

We'll refer to the cursor's horizontal position as Xpos and the vertical position as Ypos.

The screen address can be calculated using the following three equations, depending on which mode you're in. (Remember that in mode 0, characters are four bytes wide, in mode 1 they're two bytes wide and they're one byte wide in mode 2.)

All three equations require both Xpos and

Ypos to be decreased before they're used.

```
MODE 0 : &C000 + ( &50 * Ypos ) + ( 4 * Xpos )
MODE 1 : &C000 + ( &50 * Ypos ) + ( 2 * Xpos )
MODE 2 : &C000 + ( &50 * Ypos ) + ( 1 * Xpos )
```

```
CALL &BB78
DEC H ;Decrease Xpos
DEC L ;Decrease Ypos
;Now I'm going to make BC hold the cursor position, as
;I'll need to use HL to calculate the screen address
```

```
LD B,H
LD C,L
LD HL,&C000
LD DE,&50
OR A ;If Ypos=0, then skip the
JR Z,skip ;routine to add ( Ypos * &50 )
loop1: ADD HL,DE
DEC C
JR NZ,loop1
```

;Now we need to work out the number to multiply Xpos by
;(1, 2 or 4 depending on the screen mode)

```
skip: CALL &BC11
LD IX,table
LD E,A
LD D,&0 ;DE = screen mode
ADD IX,DE
LD E,(IX+0) ;DE = 1,2 or 4
LD A,B
OR B ;If Xpos=0 then skip the
JR Z,skip2 ;routine to add ( Xpos * DE )
loop2: ADD HL,DE
DJNZ loop2
skip2: RET
table: DB 4,2,1
```

Sprite Handling

So far we've only looked at using (screen

ASSEMBLY TIME

If anyone out there finds that, after typing in the programs above, they get the message "Syntax error", then you're typing the programs into the wrong environment. To run these programs, you need an assembler. These handy utilities will turn the programs into executable machine code, which the CPU can understand.

Choosing an assembler can be a little daunting. Look out for assembler reviews in AA or in the *AA Buyer's Guide*. If you want a good all-round Assembler & Monitor package, don't expect to get much change out of twenty quid, and if you're stuck with using a 464 without a disk drive, don't spend too much on one, as you'll soon get sick of waiting ages for it to reload after each "crash".

Personally, I use the now-extinct *Laser Genius* package, but if you own a ROM board, it may be an idea to go for a ROM-based package, as assemblers and monitors can, and often do, take up a lot of your precious memory.

After all, why buy a monitor to show the contents of your memory, when over 10K of it has been written over by the monitor!

● Maxam II: An excellent assembler from Arnor.

mode) as the displacement to add to the address of "table". Modifying the program is simple. We'll leave you with the program below, which is designed for easier sprite handling.

Rather than having to constantly load up registers with a sprite's location, length and width, this program lets you refer to a sprite using just one byte and a table of sprite addresses, lengths and widths. Each sprite needs four bytes of data, so a displacement of four is added a certain number of times to the start of the table, depending on the sprite number.

This ends up accessing the address:

```

table + ( sprite_number * 4 )
Entry:  A holds sprite number ( 0 to 255 )
Exit:   DE holds sprite address
        B holds sprite width
        C holds sprite height
        LD HL,table
        LD DE,4      ;This is the displacement
        OR A
        JR Z,skip    ;No displacements to be added
loop1:  ADD HL,DE      ;
        DEC A          ;Add (sprite number * 4) to HL
        JR NZ,loop1   ;
skip:   LD E,(HL)
        INC HL
        LD D,(HL)
        INC HL
        LD B,(HL)
    
```

```

INC HL
LD C,(HL)
RET
    
```

```

table:  DEFW sprite0 address
        DB  sprite0 width
        DB  sprite0 height
        DEFW spritel address
        DB  spritel width
        DB  spritel height
    
```

● Next month: The one thing that you can't turn to the firmware for - sprite routines. How do you get fast, pixel accurate sprites?

● Fancy writing code directly to your Z80? Machine code fans need look no further than Cracking the Code.

DO IT YOURSELF!

Now, there must be a whole load of programmers out there crying out "I knew that... I could've said that!". So put your money (your pen, actually) where your mouth is and write in! Pass on your latest tip, tell everyone about the unique way you've learned to use the CPL instruction, or whatever else it is you want to tell the world!

Whoever provides the best tip each month will receive a crisp twenty five pound note (will they indeed - ed).

The address to write to is BC1D... no, seriously folks (you're fired - ed), send your tips etc to Cracking the Code, Amstrad Action, 4 Queen Street, Bath BA1 1EJ.

NEMESIS - The Original Meddlers

GOOD GRIEF! GREETINGS!

Yes, it's a very strange advertisement - but it's time to have a few words with you all. The "new" law has confused many of us, those that "don't know" AND those that profess to know.

It comes down to extremes of interpretation, the most extreme being that BACK-UPS even though only used by the owner of an original piece of software are illegal! That means that there are several hundred thousand CPC users due to get a visit, a writ, or something unpleasant!

Here, at NEMESIS, we have always believed that the owner of an original item of software has the perfect right to do what the hell he/she likes with it - provided that by doing so the Copyright Owner is not deprived of another source of income. Many fair-minded people agree with this; if you have thirty thousand BACK-UPS of MANIC MINER they'll do nobody any harm provided that they remain in your hands.

By custom and practice (a term not to be used lightly) computer owners have safeguarded their collection by making BACK-UPS of software from their own originals.

Another "extreme" side of the new law MAY be that in order to make a BACK-UP legally you need the expressed permission of the Copyright holder or his agent.

NEMESIS utilities, well known for their power on backing-up the majority of software are still available - and remain at the same low prices.

The "extreme" side of the interpretation of the law means that you need the permission of the copyright owner to make a BACK-UP, but you'll need the means to do it!

On the basis that you may need such permission, we offer the utilities shown on the right.

If you have doubts about your right to make back-ups, then don't do it! Just to set the record straight, ALL NEMESIS SOFTWARE can be backed-UP as many times as you wish - but.....

FOR YOUR OWN USE ONLY.

Naked video

Just how do professional coders get the CPC performing those incredible graphic acrobatics? In the first part of a series devoted to special video effects, CONRAD BESSANT spills a few beans...

Almost all popular CPC arcade games have eyecatching special effects, with four-directional scrolling, screen wobbling and multi-mode screens being the most common.

Because these effects are so spectacular, many people automatically assume that they are difficult to perform, and even intrepid programmers who do try to explore them have difficulties in obtaining adequate information.

In this series of articles I shall be bringing together all the relevant information, and explaining how to use it to produce a variety of effects.

Addressing yourself

The key to these effects is what is known as direct hardware addressing.

The CPC, like many other popular home computers (the BBC micro, Commodore Amiga etc), contains several different pieces of hardware dedicated to creating screen images, thus leaving the CPU free to do other things.

In normal operation we can forget about this hardware, as the operating system will take care of it for us, but to create fast and unusual effects we must send data directly to it, as the software routines are just too slow and inflexible.

As speed is important in these effects you may think that machine code has to be used, but fortunately this is often not the case. For example, to scroll the whole screen to the left in software would mean moving 16384 bytes of memory, which would obviously be faster to do in machine code (although still not fast enough) than in BASIC. However, by addressing the hardware directly we would only need to write 4 bytes of data to the hardware, which can be done nearly as quickly in BASIC as machine code because there is so little to do.

Most direct hardware addressing effects can only be done on the entire screen, because the chips used are the ones which control the way the whole screen is displayed.

The main items of hardware used in creating the screen display are explained in brief below. Figure 1 shows how they interact.

The Monitor

Basically, this is a cathode ray tube (CRT) and

associated hardware mounted in a plastic case. Inside the CRT a thin beam of electrons scans the entire screen very quickly (in 1/50th of a second), building up an image based on the information sent by the computer. To see this in action, turn it on!

Cathode Ray Tube Controller (CRTC)

This is a 40-pin silicon chip which, as its name suggests, controls the mode of operation of the CRT. The CRTC works very closely with the video gate array (see later for details), and together it is their job to convert the contents of the screen memory into the video signals which the monitor requires to build up the picture. However, we can alter the way in which this conversion takes place, by programming the CRTC with our own values. For example enter the following:

```
OUT &BC00,8 : OUT &BD00,1
```

Quite interesting, but not very useful! We will discover why this causes the display to shimmer next month, but in the meantime type the following to return the display to normal,

```
OUT &BC00,8 : OUT &BD00,0
```

Not surprisingly, slightly longer programs are required to perform worthwhile effects. In fact the CRTC is the video effects program-

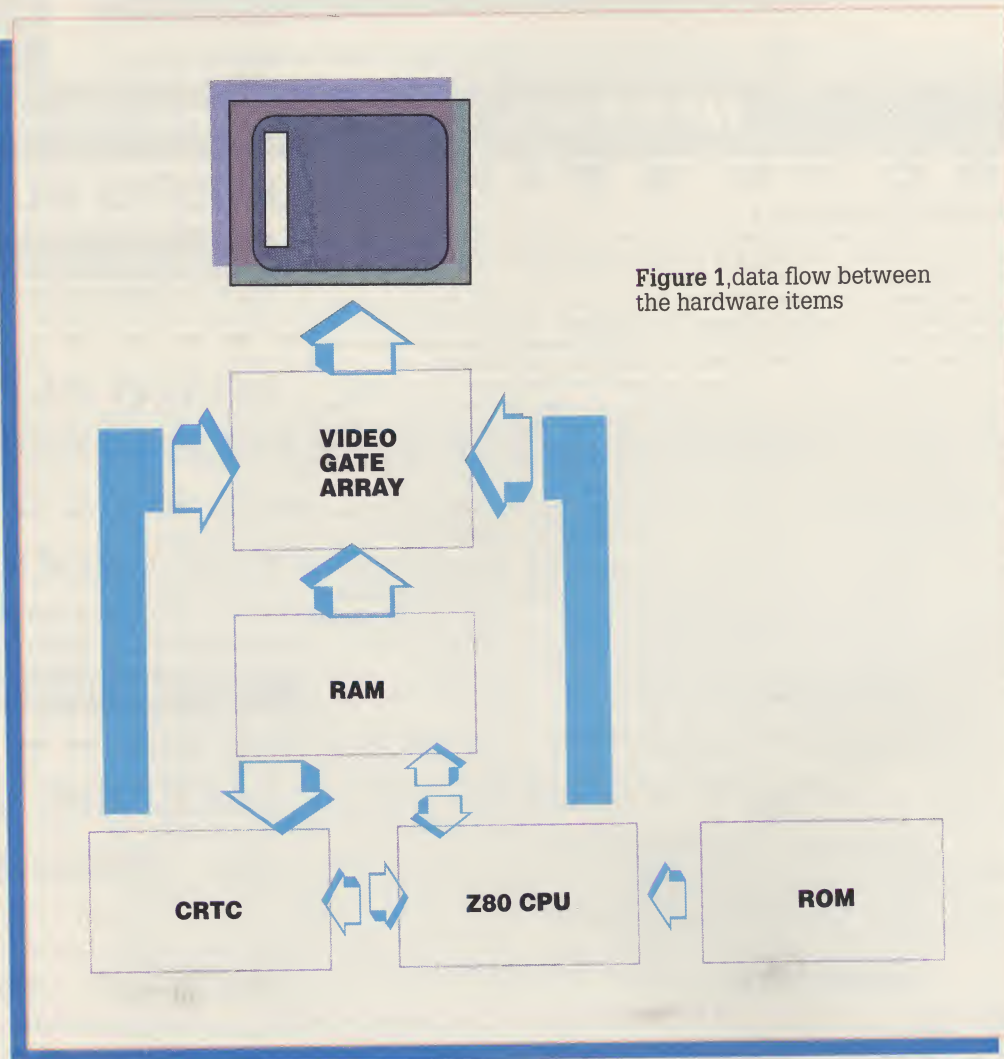

Figure 1, data flow between the hardware items

mer's most useful tool, and we use it for scrolling, wobbling, scrambling, and other specific effects.

The actual name of the chip is the 684 CRTC, and the same chip is used, or emulated, in the BBC micro, IBM PC and PC clones.

The Video Gate Array

This was produced specifically for the Amstrad CPC by Ferranti, and performs several important actions – of which the most interesting to us are changing the screen mode and loading information into the colour palette (the BASIC

● ...give it a quick poke, and you can make it shimmer like this!

'INK' command employs this chip). Direct addressing of this chip is not as simple as addressing the CRTC, but several firmware routines are available which help us address it. For example, type in the following:

```
CALL &BD1C
```

What we have done is called a firmware routine which tells the video gate array to select mode 0, but we have not cleared the screen or informed the routines which put text on the screen that the mode has been changed, so text is still being written as if in mode 1 – hence the text is illegible.

Again, this is quite useless on its own, but it forms the basis of programs which use several different modes on the screen at once. To return the screen to normal just change modes using the MODE command.

The Screen Memory

This is a section of the random access memory consisting of 16 kilobytes, in which the screen display is stored. All actions such as drawing lines and writing text address this memory, which the CRTC and the video gate array then use to create signals for the monitor. This is the only piece of hardware which does not alter the entire display when addressed.

This area of memory is usually between &C000 and &FFFF in RAM, but we can tell the CRTC to use a different area of memory. For example:

```
OUT &BC00,12:OUT &BD00,43
```

This causes some of the computer's workspace to be displayed on the screen. The pixels on the screen which keep changing are memory locations whose contents are constantly being updated – things like system counters and the stack. Again, just change modes with the MODE command to return the

● Take a normal mode 0 picture...

display to normal.

Both sprite animation and vector graphics programs address the screen memory directly for speed. These articles will deal with neither of these, as sprites have already been explained very well elsewhere and vector graphics could well warrant a series of articles of their own.

The Screen Firmware

Firmware is the name given to machine code routines which are permanently stored in the CPC's ROM. We access these routines by CALLing an area of RAM called a 'jump-block', this jumpblock then calls the appropriate routine from ROM.

● and this is what you get if you transfer it into mode 0 without redrawing the screen.

There are several sets of routines, called 'packs' which control the screen. These are the Text VDU, the Graphics VDU, the Screen Pack and the Machine Pack. Usually the firmware routines are too slow for video effects, or are not tailored exactly to our needs and we have to resort to direct hardware addressing. However, we will occasionally use the Machine Pack, as it contains routines to make hardware addressing easier (this is what we used in the video gate array example above, and is how we managed to bypass the Screen Pack). The following program is an example of how we call the Machine Pack in order to change the colour palette using the video gate array.

```
1 CALL &BD22:CALL &BD25:GOTO 1
```

RUNNING this makes 'bands' appear to move smoothly up the screen. This is because the program is changing the colour palette out of synchronisation with the monitor. The BASIC 'INK' command is automatically synchronised with the monitor, and is a prime example of the lack of versatility of the software.

Generally, in BASIC video effects programs, if you see a CALL statement firmware is being used, whereas if you see a POKE or OUT statement, direct hardware addressing is taking place.

● This picture was created in mode 2...

That concludes a general overview of the CPC's video hardware. It might seem a little academic at the moment, but an awareness of the basic principles is required before moving on to the details of how to produce more useful and complex special effects.

● Next month we will be looking in detail at the most interesting video chip, the CRTC, and using it to produce some spectacular effects.

THE GALLERY

● Don't look if you can't stomach it. The Alien pops out courtesy of Martain McCanney, Co. Dublin, Ireland.

● A rip-roaring tiger from down under (I didn't know they had them in New Zealand!). From Dave McWha of Hamilton.

● A shining example of R. Patel's handiwork. It's Jack Nicholson, and he's not joking!

● This magical Irish fairy-tale fellow comes from Dave McWha of NewZealand, who uses *Advanced Art Studio* for all his work.

● This colourful kingfisher comes from R. Patel of Birstall. *Advanced Art Studio* was used to create the image.

Here comes another R. Patel masterpiece, but where did he see our publisher driving like this?

● All you great CPC artists out there stand to win yourselves £20 and the eternal glory of having your pictures printed in AA.

So send those piccies in to the address on the right, together with some brief notes on the paint package and any special techniques you used - and don't forget enclose an SAE if you want your disk back.

SPEECH SYNTHESISER & STEREO SOUND BOOSTER

**NEW
LOW
PRICE**

- This easy to use Speech Synthesiser includes a powerful Stereo Amplifier and two Pod Speakers which are an enormous improvement on the sound supplied by the internal mono speaker.

- Speech output is monorial but directed to both speakers. Booster gives stereo to computer internal sound output.

- Using the SPO/256 Speech Chip the unit has an almost infinite vocabulary.
- Text to speech software is provided in ROM to make speech output simplicity itself.
- Voicing is transparent to the user and the computer can carry on with other program tasks.

ONLY £29.99

464 or 6128 (Please state which)

music machine

The RAM Music Machine is probably the most exciting music add-on available for any computer.

- It's a full sound sampling system allowing any sound to be recorded digitally into computer RAM. Once stored the sound can be replayed at different pitches with many varying effects.
- It's an echo chamber & digital delay line.
- Various sampled sounds are provided to get you going.
- The Music Machine can be used as a drum machine - eight drum sounds are provided, but you can easily produce more of your own.
- The powerful software allows you to compose tunes from individual bars of music. You can edit on screen & Save/Load sounds, instruments & rhythms.

- The Ram Music Machine supports full MIDI In, MIDI Out & MIDI Thru. Output through your Hi-Fi or Headphones. Comes complete with Microphone.
- Use a full size MIDI keyboard to play the Music Machine.
- Sounds produced by the Music Machine can be mixed with a MIDI Synthesiser's own sounds.
- On screen Sound Editor can produce MIDI data from your own compositions.
- No other product can offer so much in one unit - it's the total solution!!

**ONLY £49.99 (Cassette)
ADD £5 IF DISK REQUIRED**

POWER**

dk'tronics

64K AND 256K MEMORY EXPANSION

- Simple plug in memory expansion gives instant extra memory.
- Features bank switching software for easy use by the programmer or for use as a data storage area.
- The software also features some extra BASIC commands.
- 64K unit expands 464 to 128K. The 256K unit takes your 6128 to a massive 320K!!
- 64K unit brings 464 up to CPC 6128 memory configuration making a much larger software base available. Will work straight off with many programs designed for this unit (including OCP Art Studio - see Ad.).
- Ideal for use with the CPM 2.2 etc.
- All bank switching done automatically by supplied software (cassette 464 - disk 6128).

ONLY £49.99

64K FOR 464

ONLY £99.99

**256K FOR 464 OR
6128 (PLEASE STATE)**

THE TOTAL SOLUTION TO YOUR MEMORY EXPANSION NEEDS!!

SILICON DISK 464/6128

- This is the fastest storage system available for the Amstrad CPC computers and is compatible with CPM 2.2, CPM+ and all DK'Tronics peripherals.
- The 2516K Silicon Disk is designed to be used in conjunction with at least one normal Disk Drive attached to the system.
- When the 2516K Silicon Disk is fitted only 2K is used for the Silicon Disk directory, leaving 254K for storage - that's 70K more than a normal Disk Drive.
- Programs can be exchanged between Silicon Disk and normal Disk for increased speed.
- Software is on ROM (nothing to load) and can be used in two modes - Basic under AMDOS with normal LOAD, SAVE CAT MERGE commands etc. and within CPM 2.2 CPM+ where commercial programs are designed to run on multi-drive systems.

ONLY £129.99
464 or 6128 (Please state which)

PCW 8256/8512

**PCW 8256/8512
JOYSTICK + INTERFACE**

- Now you can have true Joystick control for games on your PCW.
- Connects to PCW Expansion Port.
- Quickshot II has trigger and top Fire Buttons plus Suction Cap Base.
- Superb control for large range of games (Tomohawk etc.).

Only £19.99

Cram : Reduces disc space required by compacting single or combined Stop Press pages

Build :- Reconstitutes Crammed Stop Press Pages for editing by Stop Press. Pages may be Built in a single or combined format.

Five high speed 7 pin printer modes. High Resolution, High Resolution Condensed, Draft, Draft Condensed, and Proofing

View : Previews Pages or Crammed Pages. Combined Pages can be Swapped or Altered.

Queue : up to 8 crammed pages to printer for continuous printing.

VIEW

As reviewed in Amstrad Action Aug. 1989 and Amstrad User Oct. 1989.

At last! The utility Stop Press users have been waiting for. Within a W.I.M.P environment, using A.M.X mouse or keyboard control, X-Press can print your Stop Press pages at least four times faster using a DMP-2000 or EPSON compatible printer. X-Press can compact your page files saving valuable disc space. Furthermore AMSDOS and RAMDOS 3, 3.5 and 5.25 inch second drives are supported. To produce foolscap or higher resolution A4 pages, two Stop Press pages can be combined.

This advertisement has been typeset using **Stop Press and X-Press.**

HELPLINE

Feeling helpful? Just send your name, address, phone number (say if you don't want it printed) and subjects on which you're offering help to: *Helpline*, Amstrad Action, 4 Queen Street, Bath, BA1 1EJ. Please write on a postcard or the back of a stuck down envelope and keep it short or you won't get in (or you'll get cut to 'load-sagames').

If you want help contact the appropriate Helpliner - not us. By post include a self-addressed, stamped envelope for the reply - or you won't get one. And phone only in decent hours!

Piracy is not welcome: don't try it, you'll get booted off. Keep it legal. And if you receive SAE's, for heaven's sake return them with some acknowledgement. If you want to come off *Helpline* just write and say so.

I wish to contact any Amstrad owner who is a postal chess player and plays in PPC tournaments etc...
A H Mahon, 34 Gorsedale Park, Wallasey, Wirral, L14 9HB. ☎ 051 630 4337

Calling all 464 owners. I need all your unpublished PD programs ASAP for the December copy of "Pete's PD". In return you will receive fame greater than Elvis. Please send your cassettes to me. All programs I decide to use will receive a copy of the cassette, when finished and also will get asked to write more PD for the March edition.

Peter Charles, 41 Rocky Park, Rock Ferry, Birkenhead, L42 1PL

Desperately seeking a copy of *Hitch-Hiker's Guide to the Galaxy*. Sensible offers paid. also help on *Great Escape* wanted.

Neil Mckeown, 6 Glenview Park, Bangor, Co Down. ☎ 0247 466192

Penpal wanted to swap letters on disk. Send either a *Word Perfect* file or just REM statements in BASIC. I am football mad but I am desperate for any sort of correspondence.

Michael Aidulis, 45 Braidholm Road, Giffnock, Glasgow, G46 6EN.

Wanted! Desperately! Copy of *Rampage* on cassette any condition, good price will be given.

Andy Outram, 2 Claygate close, Elm Park, Hornchurch, Essex, RM12 4LU.

Stop Press help. Ex-Acorn Electron user, any fellow refugees, plus any one else who wants a pen pal.
James Reid, 13 Milverton Avenue, Bearsden, Glasgow, G61 4BE.

I am editor of a local school magazine. Required: anyone willing to write anything they like eg. film/album reviews, soap operas... anything. Also any help in arranging interviews with celebrities would be greatly appreciated. Any help from America, Australia etc. welcome. Penpals wanted.

Andrew Wong, 10 Gerllan, Tywyn, Gwynedd, LL36 9DE. ☎ 0654 711629

Wanted, Multiface 2. Will swap *Super Hang-on*, On

The Run, *Super Nudge 2000* and *Express Raider* on tape.

Ellis Vincent, 24 Highwood Ave, Bilbrough, Nottingham, N98 3AF.

FREE software - Penpal wanted for 18 year old 6128 owner. Send disk and I will return it full of free PD software.

Stephen Robinson, 1 Sycamore Ave, Golborne, Warrington, Cheshire. WA3 3SF.

Penpals wanted especially those with experience of the LC-10 printer (non-colour). Especially user-defined characters and screen dumps. I have a 6128 and am 15.

Adrian Forbes, 37 Victoria Rd, Gourrock, Scotland, PA19 1DF.

Help wanted on *Treasure Island Dizzy*, cheats or how to get hold of the bag of gold?

Mark Fletcher, 18 Reynolds Way, Abingdon, Oxon, OX14 5JT.

Anyone got a copy of *Amstrad Action* 26 and 28? Cover price paid.

Mark Rogowski, 33 Whiphill lane, Amthorpe, Doncaster, DN3 3JP. ☎ 833122.

Help needed with Digital Electronic Audio filter in *Academy* stage 2.

Harry Banks, 19 Wiiloughby Rd, North Shields, Tyne and Wear, NE29 7NB

Need help on *Combat School* and *Death Stalker* and others, please somebody write!

Mark Warman, 37 Riben Ave, Somercotes, Derby, DE55 4LL.

Need help! On *Predator*, *Target Renegade*, *Gryzor*, *Dragon Ninja*, *Barbarian 2* and *Roadblasters*. Will pay for cheats and pokes, send SAE with pokes.

Phil Lloyd, 18 Ringway, Ellesmere Port, South Wirral, L66 3LE.

Mature person (retired), fair knowledge BASIC/*Protext* on 464, now trying to master BASIC and CP/M Plus on new 6128. Would like to correspond with any person on these subjects. Would welcome chance to purchase cheap second hand *Protext* and similar serious applications on disk.

Mick Baker, 68 Northfields, Clowne, Chesterfield, S43 4BA.

Has anyone got AA28 they're willing to sell? Please (I'm desperate), your sensible offer paid.

Michael Hourinhan, 29 Minyr Awel, Pontneddfechan, Neath, West Glamorgan, SA11 5ND.

I will write your database for you... any type.
K Grimsditch Jnr, 12 Reddish Vale Rd, Stockport, SK5 7HE.

Penpals wanted for 6128 owner, I'm 14. Any sex or country, ALL letters answered!

Pia Janering, 7 Harford Walk, East Finchley, London, N2 0JB.

Help: Need AA4 and 22 in a rush. Any *sensible price paid!*

Daniel Maharry, 10 Boleyn Ave, Westbrook, Marge, Kent, CT9 5HL.

Anyone got *Stockmarket* disk or tape? Your sensible price paid.

A Davis, The Old Vicarage, Meerbrook, Leek, Staffs, ST13 8SJ.

Infinite lives pokes wanted for *Arkanoid* and *Aliens* and infinite time on *Stormlord* much appreciated.

Robert May, 13 Bragenham St, Gorton, Manchester, M18 7AN. ☎ 061 230 6755 - after 7pm.

464 owner wants female penpal, 12-14. Photo and telephone number required.

Liam James, 40 Marion Rd, Smethwick, Warley, West Midlands, B67 7LL. ☎ 565 3958.

Help wanted on *Captain Blood*. Anyone have *Salamander* for sale, tape/disk or *Speedtrans +3*.

David Owens 16 Borrowdale Walk, Lake View Est, Northampton, NN3 1PW.

Help wanted. Has anyone out there in help and got a 464 or 6128 *Firmware Manual*? If you have I've three tasty videos to offer: *Conan the Destroyer*, *The Jerk* (Steve Martin) and *The Entity*. All originals with covers - VHS.

Michael Hayes, 70 Lonsdale St, Nelson, Lancs, BB9 9HG.

Has anyone got *Lurking Horror* (Infocom disk), *Hitch-hiker's Guide to the Galaxy* or *Lucasfilm Prestige Collection* on disk to sell?

Stephen Jackson, 55 Bayswater Place, Leeds, LS8 5LS. ☎ 0532 487409.

Help with: Multiface 2, FD1, DMP2000, DK'tronics Speech ROM, *Tasword*, *Advanced Art Studio*, *Cherry Paint*, *Discovery Animator*, BASIC programming, customising computers, making joysticks, tape loading problems and most games. Also listings/screens printed 2p a page.

David Carter, Ruxley House, 28 Mount Hermon Rd, Woking, Surrey, GU22 7UH. ☎ 0483 763223.

Games for sale. Many unavailable titles, send SAE for list. Offer open to 664/6128 users until January 1st.

JE Hayes, Robinmead, 1 Heronway, Hutton, Mount, Essex, CM13 2LX

Offering help with GAC (anything) or BASIC (anything). Have pokes from complete set of AA and ACU for games. Loads of games, some MC also.

John Whelan, 17 Sycamore Rd, Rathenapish, Earlington, Ireland.

♦♦ VIRGIN'S SANTA ♦♦

**FREE
GAMES
THIS
WAY**

Don't miss out on an extra special stocking this Christmas when Santa will be awarding the lucky winners with:

5 FIRST PRIZES OF

£1,000 worth of software of your choice, or an Amiga or ST plus £500 worth of software of your choice

10 SECOND PRIZES OF

£500 worth of software of your choice

20 THIRD PRIZES OF

£250 worth of software of your choice

1000 RUNNER UP PRIZES TOO!

Any one of the six Virgin Games arcade classics mentioned earlier.

**MAKE SURE SANTA
VISITS YOU
TWICE THIS YEAR!**

HERE WE GO!

Virgin Games have decided to become a Santa and hand out £30,000 worth of fabulous goodies. All you have to do to gain from Santa's generosity is to buy any three of these games:

SHINOBI

DOUBLE DRAGON II

GEMINI WING

CONTINENTAL CIRCUS

SILKWORM

NINJA WARRIORS

Simply collect three tokens - you'll find one in each game - and send them to Virgin Games. The prize draw will take place on 29th January 1990.

**WIN
£30,000
WORTH
OF
PRIZES**

discover why!

SHINOBI

You're masashi, a tough ninja warrior on a mission to clear the town from rebel martial arts fanatics. Explore the scrolling urban landscape and beat the hell out of your opponents, but watch out for the end-of-level guardians.

SILKWORM

It's not true! Even after months of negotiation with the Ruskies and despite a mass exodus out of Afghanistan,

we're still under threat. There's no one left to press the Nuke button so the battle has switched to copters and plane. Non-stop shoot-'em-up arcade action.

CONTINENTAL CIRCUS

Compete in formula one races in Brazil, America, France, Monaco, Germany,

Spain and Japan. Race hard, but watch out for other cars.

Colliding can be fatal. And do visit the pits for fuel and repairs.

GEMINI WING

The aliens have had enough. They're not going to take their brethren being blasted on computer screen any more. So they've come down in their hordes to blast the pitiful race of carbon-based life forms called humans. Can you stop them? Somebody has to do it.

NINJA WARRIORS

Can you survive brutal enemy onslaught? Fight with hand, foot and dagger to rid the street of the scum that dare infest your home town. A classic arcade conversion.

COMING SOON!

COMING SOON!

DOUBLE DRAGON II

Ferocious two-player simultaneous martial arts mayhem. Evil fiends have captured your girlfriend - it's up to you and your brother to rescue her. Don't fail. Through the town, countryside, mountains and finally into the lair. Use whatever weapons you can find to stay alive.

Stand up for Tasword!

Last month TOM OSMOND looked at customising *Tasword* to suit your needs. This month's second and final instalment tackles the nitty-gritty – editing that text.

In part two of our *Tasword* reappraisal we are going to look at what the program can do, rather than pick out its faults.

Now if you followed last month's issue, you should by now have at least one disk customised to your own requirements – the rest is plain sailing!

You can forget about those glorified courses in word processing (I had to take one as part of my degree studies) because armed with your CPC, an instruction manual and a few ideas, you can learn as you go along. *Tasword* is ideal for this. Its operating simplicity alone should be listed as a function!

It's always easier to work with text in memory, so if you haven't yet written that first chapter of your novel or letter of praise to AA, load your customised copy of *Tasword* and type out a few paragraphs to experiment on.

That done, return to the main menu (CTRL + Return) and press "S" to SAVE this text file. A name of up to eight characters can be used, such as CHAPTER or CHAPTER.001. Should you have a file on disk with the same name, the old file is given the suffix .BAK as a back-up. All files are held alphabetically in the disk directory and remember that a full CATalogue is given before the SAVE prompt.

The Merge text option on the menu is particularly useful for linking text files before printing. Press "M", follow the on-screen prompts to merge the file you have saved and it will follow on from your original document in memory. However, should you need a merged file to begin on the next page, use the on-screen page marker (CTRL+P), type a single

character at the bottom of the last page and then your merged text file will enter memory as the first line of the next page. All you have to do then is erase the unnecessary character.

Editing highlights

So *Tasword* can clearly create text files and successfully store the information, but how does it function as a text editor? This has to be where any word processor stands or fails – and *Tasword* stands with the best of them.

New characters or lines can be inserted (CTRL+I and CTRL+O) at the cursor position, single words may be deleted (SHIFT+DEL) as can entire lines of text (CTRL+DEL). Unfortunately, these last two commands are sited too close together and many is the time I've deleted a line rather than a word! *Tasword* comes to the rescue, though: press CTRL+@ and the previously deleted line is restored at the cursor position and human error is rectified.

Tasword's ability to reformat an entire document to new margin settings is a neat feature, particularly when the printed text does not conform to your original ideas. To operate this, first clear all margin settings (CTRL+S), set the new left margin (CTRL+A) with the cursor set on the desired column, then the right margin (CTRL+D). Before you reformat (here using CTRL+U) to force the text to conform to the new margin settings you *must* insert a blank line (CTRL+I) between every paragraph. This is time-consuming, but failure to do so will result in the entire document being reformatted as one single paragraph! The blank lines can be removed later (CTRL+DEL).

Tasword's block commands – the cut and paste facility – is straightforward enough, but again takes time. Sections of text can be moved within the document erased. The beginning and end of the section must be marked (CTRL+B and CTRL+V respectively). A press of CTRL+M will move this marked section to the new cursor position, or else CTRL+C will

COMMAND PERFORMANCE

The following are *Tasword's* most commonly-used command keystrokes:

CTRL+2	HELP page off	CTRL+W	centre a line of text
CTRL+6	put header into memory	CTRL+Z	clear all TAB stops
CTRL+7	put footer into memory	CTRL+@	restore the last deleted line of text
CTRL+A	set left hand margin	CTRL+DEL	delete a line of text
CTRL+B	mark beginning of block of text	CTRL+TAB	clear TAB stop at cursor position
CTRL+C	delete marked block of text		
CTRL+D	set right hand margin	CTRL+SPACE	to insert printer control character
CTRL+I	insert character or line, on/off	CTRL+ENTER	return to main Menu options
CTRL+J	rejustify paragraph	SHIFT+DEL	delete a single word at the cursor position
CTRL+K	rejustify line of text	SHIFT+TAB	set a TAB stop at the cursor position
CTRL+L	unjustify line of text		
CTRL+M	move marked block of text to cursor position	CTRL+ [go to top of file
		CTRL+]	go to bottom of file
CTRL+O	insert text, on/off	CTRL+<	scroll up one line
CTRL+P	dotted line marking page break on-screen, on/off	CTRL+>	scroll down one line
		SHIFT+ [scroll up one page
CTRL+S	clear all margin settings	SHIFT+]	scroll down one page
CTRL+V	mark end of block of text		

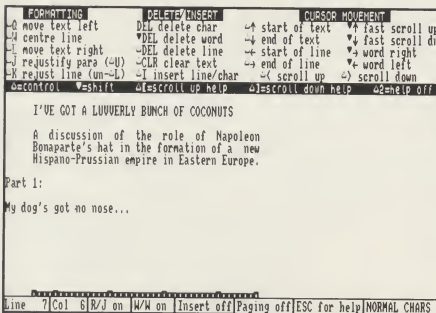

delete it. However, *Tasword* is limited to moving a maximum of 16,000 characters at any one time.

If you have a printer attached, select the "P" option from the main menu and *Tasword* presents an incredibly simple printing menu requiring the minimum of fuss to operate. However, if you fail to respond with a "Y" at the "Form feed at page breaks" option, then the perforations on continuous paper will not be skipped!

Headers or footers can be added to each page of printed text. Typically, these might consist of your name and the title of the story, or whatever else you require. Entering such single lines of text into memory is enabled by the use of CTRL+6 to set the top line of text as a header, or CTRL+7 to set the top line as a footer.

Prints charming

To print, select the appropriate option on the printing menu – and this is the reason we had to spend so much time last month customising

● *Tasword* reformats (referred to confusingly in the program as *re-justifying*) text a paragraph at a time. The new ruler line can be seen at the bottom of the screen.

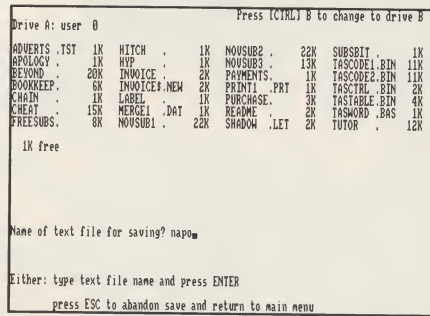

the number of lines per page to our own needs! So, to print a text file you need only respond to each question on the menu in turn (or else press COPY to select the default mode shown) and watch in amazement as a new masterpiece takes shape on paper.

Tasword has its own in-built facility for providing printing options such as emphasised, condensed, double strike, elite, italics and underline. Users of Epson printers will not have to adjust any of these codes, but each can be configured to suit your own printer if need be – and this can be done at the program customising stage, when the printer control codes may be redefined and then saved.

But how do you tell the printer to change styles? Simple. Return to the main document in memory, and prepare to add a few strange characters to the text...

Titles can be underlined, for example, by placing the cursor at the square before the first letter, pressing CTRL+SPACE and then typing a capital "J". This letter will appear on the screen in inverse video (black on green rather than green on black if you have adopted the colour scheme recommended last month). Move the cursor to the square after the last letter of your title and repeat the process, this time typing a small "j" – capital letters turn a printing function on, small letters turn it off.

This same process can be applied to other

● The Save option gives you a full disk directory before you have to type in your filename.

printer control codes, but one drawback with *Tasword* if you have a justified right margin is that the program does not compensate for these codes and will replace them with blank spaces at the end of a line. To overcome this, unjustify the line where the control codes appear (CTRL+L), move the cursor outside the right margin and type in the last two letters of the last word (or one letter if only one code appears in the line). Erase these letters from the word and then rejustify the line (CTRL+K). Although your last word will over-write the margin on-screen, it will be printed normally on paper.

Unless you have been fortunate enough to acquire a printer of quality, then sooner or later you are going to need *Qualitas* and an 8-bit printer port. Installation of the loaders for both programs into *Tasword* is achieved easily and not only do you need just the one work disk to RUN them all, the end results are stunning. Besides, using *Qualitas* means you never have to make allowances for embedded printer control codes since this printing utility automatically compensates for them.

All this and more

Apart from the customising process, which needs be done once only (unless like me, you need various formats to work within), the program handles text efficiently and quickly, requiring no thought in use at all – giving you, the writer, more time to concentrate on the creative business in hand. As a stand-alone program it provides all the functions, and probably

● *Qualitas* is an excellent printing utility which can be used in conjunction with *Tasword* to give near-letter-quality (NLQ) type and a range of fonts.

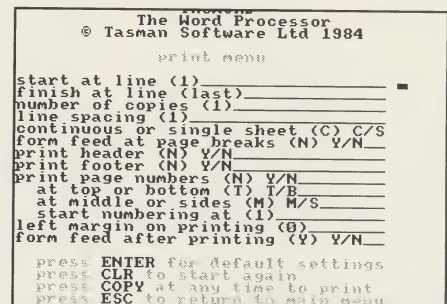

IF ONLY...

Alas, further upgrades of the program are unlikely. Tasman states this would not be within their policy. This is a pity. The ability to print out in two columns would have been nice, but this, Tasman advises, would be almost impossible to achieve on an 8-bit micro – there are even problems with 16-bit machines. It would be nice also to be able to print specified pages rather than having to state line numbers at the printing stage, and a speedier way of moving blocks of text around would also come in handy – as would a quality spelling checker. Other tasty additions would be an on-screen word count, an opportunity to format disks from within the program, and the facility to alter or erase filenames without having to go through the whole LOAD and SAVE process.

more, you are likely to need, and with *Qualitas* the improvement in print quality is surely worth the time taken to set up the two programs.

But *Tasword* 6128 doesn't end there. It has a second character set filled with numerous signs and symbols which can be incorporated into your text if you use an 8-bit printer port. It can print labels, and it has a data merge facility whereby multiple copies of letters, for example, can be printed out, each with a different name and address. This facility needs a full tutorial of its own to do it justice.

As far as the CPC range goes, however, the 6128 version is the final one. What you see on screen is what you get, not just in terms of text

● *Tasword's* Print menu is comprehensive but straightforward to use.

printed but also program development.

Tasword has many things going for it. Ease of use, the need to know only a few simple commands and big text file storage in memory, to name but a few.

Yet surely this was what the 6128 was created for (or 464 with memory upgrade) because there is no point paying for extra memory if software fails to use it efficiently. This program is no toy, nor is it freebee software aimed at the casual user. It is still a quality program with professional applications and deserves to be treated as such.

And that was the whole point of this reappraisal. What *Tasword* can do seems to be ignored by its critics who are only concerned with its apparent drawbacks. Software, it seems, has to conform to fashion, and *Tasword* has been unfashionable for a long time – without cause.

BATMAN - THE MOVIE

Ocean ● £9.99 cass, £14.99 disk
joystick/keys

The mist-shrouded night is pierced by a shrill scream. A mugger's body hits the ground, his booty scattered around him. A shadow disappears into the dark alleys of Gotham City to continue its hunt... the Dark Knight has returned, and he's looking for prey.

Jack Napier's got to laugh. In fact he's been unable to do much else since the accident. Falling fifty feet into a chemical cocktail wasn't exactly hilarious, but the

● The Batmobile eludes Joker's van.

A twisted criminal genius and a caped crusader bent on revenge are about to come to blows in the most spectacular bat-

● Batman climbs the Batrope to the next platform.

all the futuristic hardware a crime fighter could wish for. Who will win? Forget Messrs Keaton and Nicholson, this one's up to you.

The on-disk-movie opens in the Axis Chemicals warehouse. Jack Napier (the Joker) is trying to recover some incriminating documents and naturally Batman wants Jack. The plant is a maze of twisted pipes and vats, leaking toxic vapours that injure on contact. To make matters worse there are so many of Napier's men after Batty, you can hardly move without having to kill one – a crying shame! Your tools are the Batarang throwing stars, Batrope, that

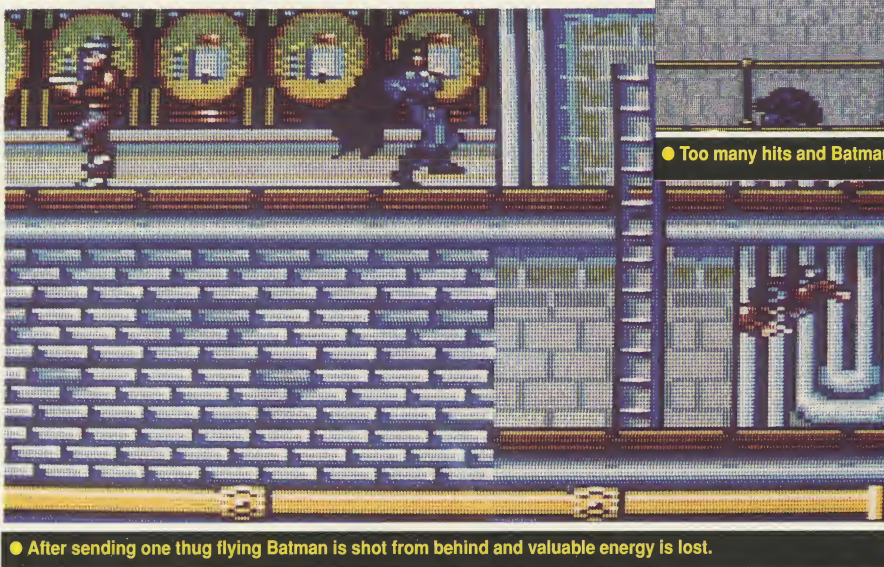

● At the end of Level One Jack Napier falls from his platform after a well-aimed Batarang shot.

results were hysterical. His face turned white, his hair green, but he got one wicked sense of humour into the bargain. But, as he's the first to admit, "You can't make an omelette without breaking some eggs".

The stage is set for a classic confrontation.

tle since Goliath's re-match with David. The Joker's twisted mind has brought together a bunch of hardened criminals and some pretty evil plans, but Batman has that nice left hook and

● After sending one thug flying Batman is shot from behind and valuable energy is lost.

SECOND OPINION

Holy guano, Batman! Despite the hype, Batman – The Movie has turned out to be excellent. Brilliant graphics combined with spot-on gameplay provide a Zzzzapping game you'll be playing long after the present batch of Bat-mania has died down.

AW

GREEN SCREEN

Couldn't be batter

funny rubber suit and native Gotham grit.

The factory's a multi-platform building and our hero has to find the soon-to-be Joker. Normal people use the ladders to change levels but real men use Batropes. It looks dead smooth, is good fun, and makes you a harder target for Jack's gun-toting, bomb-throwing thugs (booo!). Add this to the difficulty of dodging the leaking chemicals that weaken you every step of the way, plus a tightish time limit, and it's a total house of pain.

Having battled your way past these obstacles in the best superhero fashion you're expected to use what little energy you've left to give Jack Napier a helping hand – into the chemical crucible that will transform him into the malicious Joker. A great touch, as the energy bar showing how long you've got left to live is a portrait of Batty changing to reveal the visage of the laughing madman himself.

The factory is a dark and dangerous place where a bat may feel at home but your average games player doesn't. But it looks sweetness and light compared to the chase through the Gotham City streets in the infamous

HOLY UTTERANCES!

It was the 60's TV series that thrust Batman upon the world stage. This camped comedy version was famous for its crushing puns and awful dialogue. Most memorable were Robin the Boy Wonder's exclamatory remarks. Here are twenty of the more outrageous, comments you never even dreamed could be said with a straight face:

Holy Lodestone • Holy Squirrel cage • Holy Sub Orbit • Holy popcorn • Holy rising hemlines • Holy uncanny mental processes • Holy Zorro • Holy ravioli • Holy priceless collection of Etruscan snoods • Holy fishbowl • Holy astringent pomite fruit • Holy chutzpah • Holy cliché • Holy purple cannibals • Holy knit one, purl two • Holy Paderevsky • Holy nonsequiturs • Holy skull tamper • Holy Werner von Braun • Holy travel agent • Holy chocolate éclair

● Holy duality! Batman and Robin, inventors of new levels of profanity.

Batmobile. A huge 'Vet with a nuclear motor, this black beast has the power to literally tear up those backstreets. Unfortunately it does share the handling characteristics of its American ancestors – i.e. an overweight dead cow with a sprained ankle! To negotiate corners you need to send out a grappling hook to grab hold of lampposts to help you turn that much quicker.

Still in the land of the living? Then the next challenge is the product identification test. You've got to find out which of the three products Joker has poisoned. If they're used together then they form a deadly laughing gas that leaves the corpse with a fixed and ugly grin on the kisser. This cannot be allowed to continue as the products chosen are those of the personal hygiene variety, and Gotham City will grind to a halt if ozone and people-friendly deodorants cannot be found. There are limits! Taking a man's property is pretty low, but robbing him of the ability to raise his arms in public is beyond a joke.

Once you've solved the problem with the

City Cathedral. As in the Axis Warehouse, you're in hot pursuit of the foul felons, up and over the belfry stairs. The Batrope and its grappling hook come in more than handy here again as you fire it up to the next level, avoiding the steps where you're a sitting duck. Then after you've beaten his cohorts you get to face up to the man you created in the first scene. Complete this and you're the real

superhero, not Batman.

The whole game is held together by the graphics, which manage to capture the spirit of the movie, menace and comedy combined in an atmospheric film game. Batman himself is great. His cape flaps, he

ducks, dives and jumps. When finally beaten by the Joker's hordes he slumps to the floor, cape billowing out over him, a broken and battered man. The Batrope allows you to attack, climb and swing to dodge shots, the Batarangs are accompanied by a heroic pose when thrown.

The vehicles are disappointing but play well and prove to be a strong part of the game. As you hurtle along, the Batmobile is seen from the side, guided by huge white arrows on the road. Turn when you see the sign or you've got to spin and drive against the traffic to have another crack at it. A view from above and behind might have been better and more realistic, but viewing the car from the side keeps the movie motif alive.

The action in *Batman* is constant rather than overwhelming. It erodes your nerve, forcing you to make that one vital mistake that will cost you your last energy and send

● Batman leaps to surprise a Level One heavy.

smellies then you climb in to the Batwing and head downtown to have a look at the big parade. You aim is to stop the Joker filling the streets with poisonous gas balloons, which means flying your plane in and out of the streets and houses to catch them.

Finally, you're Bat on the street again, chasing the Joker and his mad minions into Gotham

you straight back to the first level... That's right – none of those credit things, a blunder can cost hours of intensive gaming and yet another visit to the Axis warehouse.

On tape it's a multiloop, but even this can't disguise the game's innate playability and addictiveness. Soon you forget the film and begin to create your own superhero mythology, taking great pride in killing awkward-to-reach bad guys with over-the-shoulder shots from the Batrope, and swing out of grenades' way when the going gets a little too hot even for the Dark Knight.

Surely it's impossible for any game to live up to such hype? Is the Caped Crusader just 'a wimp in a rubber suit'? No. The game's the best movie licence this year – if not ever – capturing the same dark and dominating air that pervaded the film. It still manages to retain its own personality and doesn't just trade on a famous name. Dance with the devil in the pale moonlight, and you're assured hours of frustratingly addictive game-play.

● A wrong turn on Level Two and you're nicked.

BATHISTORY

- Batman was first drawn in 1939 by Bob Kane.

He first appeared as *The Batman* in *Detective Comics*, a masked vigilante out to avenge the murder of his parents.

- Bob Kane also drew strips called *Rusty* and his *Pals* and *Clip Carson*. Criminals to Batman were "a cowardly superstitious lot" so he chose his disguise to strike terror into their hearts. "I must be a creature of the night. Black, terrible...that's it...I shall become a bat!"

- The Batman appeared in Issue 33, of *Detective Comics*. Within a year he had his own mag.

- Robin was introduced to the strip in in 1940, to humanise the dark vicious loner image The Batman had acquired.

- The first full-length movie was actually a 1943 15 part cliffhanger serial joined at the edges and called *An evening with Batman and Robin*.

POWER DRIFT

Activision ● £9.99 cass, £14.99 disk joystick/keys

The California sun does strange things to people, especially those in open-topped cars. Why do we say this? Because it makes them want to *Power Drift*! To charge around insane circuits constructed out of old railway sleepers at 243 kph, taking hairpin bends on two wheels hollering insults at each other.

In arcades the world over, the coin-op has caused people to lose their lunch on a stomach-churning ride to the limits of motor racing and beyond. Risking being hurled into space after cresting hills and finding a ninety-degree hairpin staring them in the eye was what

● Choose both driver and course before the off.

drew them back time and time again!

Power Drift is a racing fantasy, super-powered off-road cars racing head to head over a course more suited to roller coasters than cars! The essence of the game is summed up in its name, a mad charge into corners losing all traction in a bid to get past that bozo who just span you out.

The arcade was the natural successor to *Out Run*, with its hydraulic cabin taking you right over the high side. We all saw what a dog that turned out to be, though, so can there be any hope for *Drift*?

Yes. More than hope, there's glory there too if you're crazy enough to try. After months of work

Activision's programmers (the same team which did *WEC Le Mans*) have managed to come up with an awe-inspiring nightmare of a game that redefines the parameters for fantasy racing on the CPC. Five different courses have been shoehorned into 64K in a drive you'll never forget.

Set in the California desert, the tracks are made out of rough tarmac, loose gravel and logged overpasses. They aren't long drawn out affairs like Le Mans or Monaco but tight, small sprint circuits where he who dares wins and those who ride and slide come out on top. Victory on these roads is harder than you might first think, though. The track is narrow, and the competition fierce.

● Rev up and go when the lights hit green.

The other cars aren't just there as moving obstacles but actually race you to the line. Four laps of mayhem are the result as 12 dune racers battle it out for third place or better to qualify for the next round.

Races need drivers, and a batch of 20-odd road-hogs are ready and willing to let you ride their machines. Rumour has it that one of

● Courses hang in space just the way bricks don't.

Sega's infamous unannounced options was a different personality for each driver, with the lady in blue (supposedly a racing mechanic) taking the title of the heaviest right foot in town – something the programmers of the conversion rigorously deny. But if Sega can do it why can't Activision?

After choosing whose colours you'll defend on the field of high octane honour, it's time to choose your track. Here the brownie points really start to pile up, because there are a staggering (and if you complete them all you will be staggering!) 27 totally original tracks to burn rubber on. Multiloaded in themed batches of five per course, they form a progressively increasing challenge.

There are different locales to look at in the background, but it's the tracks and their twists and turns that matter. Just for good measure there are two bonus levels thrown in too – just like the arcade – one simple and one ultra tough.

Once you've made a choice, the countdown is on. A winged light clock clicks off and you throttle up and head into the unknown. The only way to play this game and win is by a combination of practice and a photographic memory. As you jockey for position down an opening straight, always, always

● Power drifting lets you undertake opponents.

● Spinning out is spectacular but costs the race.

keep both eyes on the road for signs of that first and crucial bend. Cars pull up alongside you, in front of and behind you, ready to take

SECOND OPINION

Not as fast as the arcade original, but what do you expect? The fascinating, twisting courses still spin at you from nowhere though – just like the arcade. Very, very playable. Come on Trent, let's have another go...

RL

GREEN SCREEN

It gets the green light from here.

advantage of the slightest slip and send you spinning into space.

As soon as the corner appears, slam on the the power and swing the car into a slide, aiming at the apex – and with practice you'll be able to exit perfectly. Reading the road you'll develop a sixth sense for when to

● The twisting courses are unforgiving of mistakes.

straighten up and scream past the opposition. Get it wrong and every driver on the track will try to nudge you into the barriers – or worse, into space.

The slides are the focus of *Power Drift* and they add a whole new element to the art of driving. No longer have you got to sit behind some bozo who thinks fast means 28.5 miles

● The winner's car and position are shown as they finish.

per hour. Drop into a bend at the right speed and you'll drift past them. The effect is enhanced by the cars' handling. None of this quantum stuff – one press of a button and you're facing ninety degrees left. You can regulate the degree of control you surrender to skidding in an attempt to win.

The graphics aren't going to win any awards for prettiness. They're blocky, but they work! They move at speed, the colours are bright and they respond quickly to your hurried joystick waggles. They capture the spirit of the arcade even if they do fail to imitate it directly. What is important though is not that it look like the coin-op but plays like it, and the compromise is well struck.

The music is straight from the arcade – and is therefore highly annoying – and sounds off during most of the races. The

● The top of the screen shows you how fast you're going, which lap, which round and who you've got to overtake to finish in the top three.

graphic demand on the poor Z80 means that on some tracks the sound effects are absent, but who needs the noise when you're undertaking someone at a ton plus?

The most impressive feature of both arcade and CPC versions is the way the elevated tracks seem to be supported by nothing, just appearing out of the horizon. Spinning off here can have you skidding to a stop and rejoining in mid air, or sent on a spectacular slide right across other parts of the track.

You've only got two gears in this race for speed freaks – fast and very fast. The flexible control on the corners and visual clarity make *Drift* an excellent choice for the car nut this Christmas, and an absorbing test of reaction for the any committed gamer. The short tracks require maximum concentration, meaning that all the races are winable but unforgiving of the slightest mistake.

We've always been told not to drink and drive, but to *Drift* and

● A crash here and you spin off into space.

drive is electrifying. It's legal, you get better control and it's much, much more dangerous...

TW

BUFFALO BILL'S RODEO GAMES

Tynesoft ● £9.95 cass, £14.95 disk
joystick/keys

Howdy Pardner! Seems the rodeo's comin' to town, and to git some respect round here, you're gonna have to beat those cotton-pickin' two-bit varmints in six of the toughest, roughest dog-gone events this side of Dodge City. You're gonna have to be good though, 'cos you'll be competin' against up to three of yer best buddies. Ride 'em cowboy!

Knife Throwing is the first event of the world's greatest Wild West display. Your beautiful young assistant is strapped to a rotating target, and a steady hand is needed to hurl your blade as close to her as possible without severing any major arteries.

● Left a bit, right a bit, fire...

Next comes Trick Shooting. You've got to blast away the bad guys as they pop out of the ground, taking care not to waste the innocent bystanders. Once you've shown off your skills with the stationary targets, a quick bout of bottle shooting rounds off the event – bottles are lobbed into the air and you must fragment them in mid-flight with your trusty six-shooter.

Calf Roping concentrates on your skill with the cowboy's mainstay, the lasso. Climb on your horse, chase the poor little cow, throw the noose round its neck, and pull it to a stop. Brace yourself in the saddle, or it'll be you who's taken for a ride.

You'll need a fine-tuned sense of balance when it comes to Bronco Riding, and pitting your wits against a wild stallion. He's trying to throw you, so you'll have to balance just right to stay on for any length of time.

You have to take the bull by the horns in Steer Wrestling. Jump onto the back of a savage beast and force it into submission, wrestling it to the floor by the horns.

The show's grand finale is the Stage Coach Rescue. A coachload of upright citizens have been taken hostage by a Red Indian, and you must catch up with the speeding wagon, dodging luggage thrown down by the reckless redskin on the way. Leap from your horse onto the roof, and beat him senseless in a

● Yahoo! Keep your balance or bite the dust.

good old fashioned fist fight.

The game loads with the US national anthem playing merrily away and a picture of good ol' Buffalo Bill waiting for entrants to roll-up for the all-American extravaganza. Up to four players can join in the fun, each typing in their name, and selecting joystick or keyboard control mode. Slightly annoying for joystick users is the fact that the space bar on the keyboard has to be pressed frequently (this is especially frustrating on the trick shooting section, where it's used to reload the gun). Once all this is done, and events chosen, the game loads in the first section.

All sections have their own tune, and all have impressive graphics. The gameplay is a bit on the simplistic side however, consisting either of basic hand-to-eye co-ordination or furious joystick waggling. Yet the competitive

● Use all your strength to down that stubborn steer

element when several people play at once makes it great fun. Each event can be played as many times as you like, so the final score can be doctored somewhat by replaying the

SECOND OPINION

The attractive graphics and a thin veneer of gameplay disguise a multi-load bore.

RL

GREEN SCREEN

Loses its graphical appeal, which doesn't leave much else.

individual sections until a near perfect score is obtained.

The game is a multi-loader, so tape-based users will have to endure several minutes of loading time per section – often longer than it

● Gun down the bad-guy – he's in the middle.

● Bottle shooting - smashing fun!

TAMING THE WEST

● Knife Throwing: Anticipate the movement of the board when throwing. Once you find a successful spot, go for the same place each time.

● Trick Shooting: Don't follow the bottles all over the screen, trying to zero in with your six-shooter's crosshairs: keep your aim level and track them horizontally, firing when they cross your sights. If you've a quick enough trigger finger, position the sights slightly above and to the right of the bottle thrower. You'll hit those bottles every time.

● Bronco Riding: Ignore the main display – it's easier to watch the smaller balance-ometer instead.

● Stage Coach Rescue: Don't waggle the joystick too frantically: you'll make steadier progress with slower, more regular movement.

takes to actually play the games themselves.

Buffalo Bill's Rodeo Games is fun for the first couple of goes, but it's not exactly going to keep you going for months on end. It may occasionally surface from your collection when you have a few mates round and you want something you can all play together though.

XENOPHOBE

Microstyle ● £9.99 cass, £14.99 disk
joystick/keys

Aliens – don't you just hate 'em? They come down here, sliming up our planet, eating our buses, stealing our jobs... We all know what they're like, we've seen the movies! One minute 'take me to your leader' and the next they're trying to fit Granny in the microwave. There's only one solution, one thing they understand, and that's a bullet in the bonce – if they've got a bonce that is!

A quick blast and they'll never put a foot (or pseudopod) wrong again. Hang 'em high that's what I say – but then, I am a xenophobe...

In *Xenophobe* the game, alien life-forms have taken control of a space station (they aren't endangering anyone, but clash awfully with the curtains), and that's a good enough reason for mankind to declare war on the offending species.

You control one of nine characters fascist enough to hold a grudge against an entire phylum (no, I don't know why a phylum is either – ed) of creatures. You get to choose which character to play at the start of the 'Bug Hunt'. Apparently each has a different personality – but who needs personality to pull a trigger? Once you've picked your champion and chosen one or two-player mode, it's time to clean up that space station.

All prepared for the big show, you are told that 'Xenos' have taken control of one of mankind's bases, and that mankind wants it back. There's also some very vital equipment that has to be retrieved at all costs. Your mission is simply to go in there and trash the slimeballs, grab the kit and get out.

The ship approaches the planet/station/satellite and you're beamed down right into the heart of this alien nation. All you've got to protect yourself is a pretty poxy blaster and your mobility. Running speed can't be improved but the firepower at your fingertips most certainly can. Littered about each complex are numerous weapons of varying type, each having a different use and effect. You can only carry one weapon at a time however, so choose pistols with care. One of the game options is for limited ammo, so loads of loaded guns are a must.

The aliens come in a whole variety of species, shapes and sizes, each having a trait that only experience teaches. Alligator creatures roll themselves into a ball in an attempt to bowl you over. Hanging vines grab you lovingly by the head and give you the kiss of death, slowly sucking vital energy points out of your system. There are even space leeches which cling to you if not

ingly by the head and give you the kiss of death, slowly sucking vital energy points out of your system. There are even space leeches which cling to you if not

● The large beastie (bottom screen) takes multiple shots before he's killed, so take care.

shot immediately, draining away valuable life force until you exit the room.

Xenophobe is regulated by both time and energy points. The mission stipulates you have to kill a set number of Xenos in a given time period. Piece of cake really – all you've got to do is wander around blasting into oblivion every little life forms that pops its head up. That's how things start out at any rate, but they soon become harder than even the most rabid alien hunter could dream.

The problem with zapping the Xeno scum

● Three of your potential team members.

● Dr Udderbay gets savaged by a space slug, while Mr Eeeze is surprised by a crocodile lizard.

● Col Schickin, Mr Eeeze and Dr Zordirz.

back into their pools of primordial phosphorescent slime is that you've got to get close to do it. In most cases you've actually got to stand next to the creature in question to blow its brains out. Not an easy task, even if these aliens are the densest race of beings in the history of history itself. You see they tend to have large families.

Some rooms contain screens which display how much time there is left or how many aliens there are left to fry. Other features you can employ on your hunt for evil green nasties are lifts and teleports. Simply by turning to face the wall you can find your way all over the place.

The collectable objects are just left lying on the floor, and when you shoot past them a neat reminders pop up in the middle of the screen - 'pick up bomb' etc. The weapons, too, are just scattered around, giving you the opportunity to upgrade from a common phaser to laser pistols, electro guns and pulse rifles.

All hurt various monsters better and exhibit different characteristics like range and power (there being a correlation between strength of shot and the distance you can stand from the target).

SECOND OPINION

Flickery graphics always damage a game and *Xenophobe* is no exception. It is a lot more fun with two players but this means someone has to suffer the keyboard controls. Fun for a few hours but your interest soon fades. AW

GREEN SCREEN

Playable even in emerald hues.

Whichever style of game you select, your hero's antics are confined to half the screen. In two-player mode both players' wanderings are visible; in one-player mode just the top half of the screen is utilised, mimicking its arcade parent. The characters themselves are great replicas of their coin-op originals, maintaining the balance between cartoon comedy and reasonable game sprites.

The controls are (ironically) true to the arcade original. They are both temperamental and fiddly. You invariably find that when you want to stand you jump and when you don't want to pick up a wimpy gun you always do! There is also the occasional freeze, especially in two-player games when you're on the same screen and a

hint of flicker. This is not a split-second game, though, and these little hold-ups don't impair the game to any terminal degree.

The two-player controls are in fact the major gripe, since the keys are much more difficult to use than the joystick. This is offset by the fact that the game is made miles better and is also easier to play when two get launched on the termination game.

The superbly haunting tune suffers when the dual game mode is employed and this is a shame. It doesn't detract from the fun involved in the game though, which is essentially *Gauntlet* seen from a side view. Your motives are the same - replenish energy, kill the bad guys and collect as many goodies as you can lay your mucky little paws on. This means that the game lacks the subtlety but emphasises action and rapid movement through a hostile environment, reaping corpses as you go.

If you're convinced that when we do meet green men from Mars they will turn out to be as nasty and vindictive as their human counterparts, then *Xenophobe* is the game to play.

The trouble is, if these people hate aliens so much why is it they've got a mutant duck, a chicken creature and the elephant man working on their clean-up crew?

☐ Determination to discover new chambers will really make your eyes square.

AA RATING79%

☐ One of the best budget games we've seen for a while.

RAMPAGE

Hit Squad ● £2.99 cass only
keys/joystick/keys

Feel like bite? Then *Rampage* could be just the game you're looking for. Those foolish food additive people have been cooking up all kinds of trouble down at the local burger store and have put it their 'Big Mucks'. As well as ruining your figure and complexion these little burgers also turn you into a 50' high monster. A side effect that does as little to enhance your outlook on life as it does for the skyline. Because - as all giant creatures that arrive in New York - you want to level the place.

The three creatures - George the Gorilla,

SECOND OPINION

Rampage's major failing is the repetitiveness. All you do is tour from city to city and destroy, one ruin looking just like any other to me. RL

GREEN SCREEN
Monsters always look good in green!

● Five hundredweight of Rennies, please...

are out to stop the fun, but the monster militia just see them as lunch.

The aim of the game is to avoid being shot, wreck houses, eat people and rip the place to pieces. There's no subtle gameplay - we're talking about 50' gorillas after all - just running jumping and munching.

What makes the game such fun though, is its three-player mode. The two keyboard users have a bit of a rough time of it, but fine control isn't the issue. The game is fun and quite openly tongue-in-cheek. The monsters punch each other, the ground shakes when they jump and if one creature is taken to zero energy they turn back into a human. The problem being that they tore off all their clothes on becoming

an ugly sister and have to sneak off screen covering their embarrassment.

Huge monsters running riot in town is the stuff of B-movies and gets the treatment it deserves. The cartoon graphics may be a little prehistoric, but then again so was Godzilla and no-one told him he looked silly! This is great multi-player fun from the past. Can these creatures be stopped? I've an idea. It's a long shot, but it might just work... TW

MR HELI

Firebird ● £9.99 cass, £14.99 disk
joystick/keys

Muddy Hell, this is one hot LZ! You're in a chopper that's flying into the kind of firestorm usually reserved for kamikaze pilots and Iranian airliners.

'Heli's teeth' is your first reaction after loading, as the ultra twee theme tune starts to drill into your subconscious the way only game jingles can. Because of the title and music you're

expecting *Skweek* in airborne form, when what should load up but the best strategy shoot-em-up seen this year, with all manner of ships, ghosts and gun emplacements putting up flak while you divide, conquer and kill! Cute I can tolerate, violent I love!

You are *Mr Heli*, and you've got to save the planet. None of this negotiations malarkey – though, we are talking high-level, heavy-duty, armageddon.

The evil scientist known only as 'the Muddy' has taken over six levels of an 'Earth type' world and is hiding underground. He's unbalanced the forces of nature and must be stopped, but the only thing he'll listen to is the sound of your guns. Ready? *Mr Heli* was born ready!

With the jolly little jingle playing in the background it's time to dust off as you fly through a cave looking for a helipad to take you to the next level. In your way are millions of the Muddy's henchmen. Mostly they swarm at you in small shuttles or blast away from gun emplacements, although there are some heavies you can find if you really look.

To fight off these waves of nasties you've a small front-firing gun and a rocket launcher in the roof to shoot things overhead. When

● An all but indestructible end-of-level guardian

● Land on that helipad to reach level two

you've landed the rocket launcher starts hurling bombs forward. The actual numbers of enemies and shots on screen are daunting, yet the game never suffers slow down due to chip overload. The sprites react fast and accurately, giving you the precision needed to even contemplate the chance of survival in such an overtly hostile world.

Your standard firepower is nowhere near good enough for the serious battle chopper about town, though. Hidden in the walls are crystals which you can collect to give you purchasing power at the various special weapons squares throughout the complex. Collect the cash, stop and shop, and soon even the most diehard Muddy fan will be rocking to your tune.

● Shoot the rocks to find cash crystals

As you scroll around the one way landscape there is a danger you can't ignore – the border. You can't retrace your steps, so if by some miscalculation you find the scenery scrolling down while you're moving up, the result is an explosive crush. This stops you getting too tooled up and makes the shooting harder in places like the floating boulders section. The Muddy's influence over nature has caused these rocks to take off, blocking your path and threatening to squeeze you at the top of the

● The brown cubes contain either cash or weapons

● As you fly down you've not only got to shoot the bad guys, but avoid being trapped by the scenery

screen, so you've just got to blast them out of sight! What a shame!

This cutesy treatment of future warfare is taken to farcical extremes by the graphics, which are bright, colourful and highly amusing. The thundering of exploding Muddies rattles the speaker system, temporarily blotting out the (annoying) tune. Despite this continual destruction, though, the game doesn't centre on the enjoyment of killing but the speed of movement and the quickness of reactions – although a bit of gratuitous blasting is good for your system, if not theirs!

If you want heavy duty action and close, accurate infighting, *Mr Heli* can stand and blast with the best. It doesn't get the adrenaline flowing the same way as an R-

SECOND OPINION

Trenton hasn't done the game justice. The animations are excellent, especially the way Heli waddles along when on the ground. A classic shoot-em-up with massive firepower and one I'll certainly play for a long time to come.

AW

GREEN SCREEN

The flight path is clear.

Type because your character is so superior to those he fights – but it's a damned close run thing.

ACTION FIGHTER

Firebird ● £9.99 cass, £14.99 disk
joystick/keys

America's quaking in its boots. U-Boats have been seen in San Francisco bay and the call has gone out for *Action Fighter* to come and save the day. There's one small problem, though. Mr *Fighter* has gone down with a heavy cold and

ty! All you've got to do is line up behind the Sega truck that chortles into play and use it as a drive-in armourer's.

Before you're allowed to do any shape-changing, though, you need to collect four letters that destroyed cars have left lying in the road. Once these are in the bank you can change to the more manoeuvrable bike or the sturdier car. After that there's only two letters to go before you become the plane and get down to the real business of the day. The first stage is considered to be your drive to the harbour, when you get your wings and then soar

● Touching the kerb as a bike is fatal.

● The car is tougher but slower.

his mum won't let him out until Thursday. You're the only one who can take his place. You've got the weapons, you know the score, but have you got the style?

Action Fighter's ace in the hole is his car. No ordinary motor, this baby has the ability to change from a car to a bike to a plane at the flick of a switch. Add the on-road modifications available from the Sega truck and he's truly

out over the bay. Your missiles become bombs, and it's U-Boat-popping time. Quite why you can't fly there in the first place, avoiding all that on-road nastiness, is never made clear – but there you have it.

Airborne, you keep any weapons you had before (kiss them goodbye if you die) but you get a bomb sight in front of you to help trash the nasty Nazis below the sea.

● Drive into the Sega truck for special weapons.

● As you fly off the end of the pier, the bike changes into a car and then a plane.

invincible. His missions involve tearing along shooting everything and anything until the crisis is over – not a terribly rational solution, but fun.

Racing through the streets (or the skies) *Action Fighters* want to kill as many enemies as possible, because besides gaining points there's the chance of grabbing some extra firepower. Starting with a measly single cannon ain't no fun, so you must kill foes by the bucketload to gain double front blasters, bombs/missiles, back-fire-power and even limited invulnerability.

SECOND OPINION

If I'd seen it in the arcades five years ago I wouldn't have played it then, either. Pretty enough but shallow and hackneyed gameplay. RL

GREEN SCREEN

● Once airborne, life's more dangerous than ever.

Unfortunately, the *Action Fighter's* life is not a happy one. You see there's plenty of shooting and killing, but little else. There's no pace to the game and everything happens exactly when you expect it to. Continual shooting and dodging is initially good fun, but it doesn't have much staying power. Interest would be increased if the game moved at more of a lick, but as it is everybody ambles along casually disregarding the fact they're being shot in the bot by a super car/plane/bike.

The graphics too follow in this vein – they're perfectly competent but not awe-inspiring. The scrolling scrolls, the sprites sprite, but none of this happens at the reflex-numbing speed which makes vertical shoot-em-ups so appealing. The sound is limited to the occasional crash, and so even dying loses its appeal.

Coin-ops are like going to the movies for the home gamester. Now while we'd all happily trot out to spend our cash on *Lethal Weapon 2* or *Forgotten Worlds*, no sane person would queue in the rain to watch *Neighbours*. Likewise you can't imagine being drawn to this Sega coin-op. Five years ago it may have been state of the art but now it's just average. A realistic conversion like this can't therefore hope to be a classic game unless the programming team find something dynamic to add to the program.

Unfortunately, even the great team at Core Design (of *Rick Dangerous* fame) haven't managed the impossible. The result is a playable but completely forgettable product. TW

STRATEGY SOFTWARE

Strategy games for the Amstrad CPC

THE FINAL CONFLICT - the game is a conflict between Nato and the Warsaw Pact in Europe. Options are either two player or solitaire against the computer, 25 different countries involved, over 160 units, infantry, corps, parachute, armoured, cities helicopters, different strengths, effects, supplies, fuel, casualties status, different seasons, city production levels, millions of troops involved, game lasts for weeks, save game, 18 page manual plus more.

SOCCER 6128 - football strategy game which lets you manage any team in the 4 divisions. Options are buy players, sell players, league programme, fixtures, opposition, play match, instructions, league table, accounts, playing staff, save game, 10 different positions, skill, form, goal scorers, injuries, up to 20 players in squad, sacking, over 2000 players, 80 English clubs, 60 European clubs, FA Cup, League Cup, European Cup, UEFA Cup, Cup Winners Cup plus much more. Reviewed in AMSTRAD ACTION July '88. (For 6128 only, on disk only).

KURSK the clash of armour - was the biggest tank battle of WW2 in which the Germans had to beat the Soviet army to stand any chance of winning the war. The options are two player or solitaire against the computer. There are over 125 units which are infantry, armoured, corps, artillery, anti tank plus cities which all have different effects in combat. There are also supplies like troops, provisions and fuel. The object of the game is to capture the key cities or destroy enemy units. Also save game plus much more.

SOFTWARE HIRE CLUB - we hire out top game titles of strategy and simulation games for the Amstrad CPC. Send a large S.A.E for details. Disk not available for 464 disk drives. When ordering state which machine.

POOLSWINNER II

THE ULTIMATE POOLS PREDICTION PROGRAM

● **MASSIVE DATABASE** Poolswinner is a sophisticated Pools prediction aid. It comes complete with the largest database available - 22000 matches over 10 years.

● **PREDICTS** Not just SCOREDRAWS, but ALWAYS, HOMES and NO SCORES.

● **SUCCESSFUL** SELEC guarantee that Poolswinner performs significantly better than chance.

● **ADAPTABLE** Probabilities are given on every fixture - choose as many selections as you need for your bet. The precise prediction formula can be set by the user - you can develop and test your own unique method.

● **SIMPLE DATA ENTRY** All team names are in the program. Simply type in the reference numbers from the screen. Or use FIXGEN to produce fixture list automatically (see below).

● **LEAGUE AND NON-LEAGUE** All English and Scottish League teams are supported, and also the non-league sides often used on pools coupons.

● **PRINTER SUPPORT** Full hard copy printout of data if you have a printer.

PRICE £24.00 (all inclusive)

NOW AVAILABLE

FIXGEN 89/90

AT LAST! No more struggling for hours to get the fixture list into the computer. FIXGEN has been programmed with all English and Scottish League fixtures for 1989/90. Simply type in the date, and the full fixture list is generated in seconds. Fully compatible with Poolswinner. Yearly updates available.

POOLSWINNER with FIXGEN £26.50 (for both)

COURSEWINNER v3

THE PUNTERS COMPUTER PROGRAM

NOT JUST A TIPSTER PROGRAM, Coursewinner V3 can be used by experts and occasional punters alike. You can develop and test your own unique winning system by adjusting the analysis formula, or use the program in simple mode. Coursewinner V3 uses statistical analysis of major factors including past form, speed ratings, course statistics, prize money, weight, going, trainer and jockey form etc, etc. It outputs most likely winners, good long odds bets, forecasts, tricast etc. The database includes vital course statistics for all British courses. You can update the database - never goes out of date. **FULL PRINTER SUPPORT.**

PRICE £24.00 (all inclusive) includes Flat AND National Hunt versions.

ACTION SERVICE

Infogrames • £9.95 cass, £14.95 disk joystick/keys

Tired and battle-weary from recent fighting on the front line, Private Waring staggers back to barracks looking forward to a well-deserved rest. However, General Rod 'Montgomery' Lawton cancels all leave, and orders his battalion to enroll for *Action Service*.

Action Service takes place in a top-secret training camp rather than out on the field of battle. It's the prelude to a special mission, and only the *crème de la crème* will make it.

You'll need to train hard in the three tests: the physical, where you must negotiate different obstacles, clambering over walls, crawling through ditches etc; the risk section, which tests your ability handling incendiary devices; and close combat – beating up your rivals, then blasting them away with rubber bullets. A fourth section combines the three previous

● *Action Service* has a built-in construction mode.

tests to make the most gruelling route of all.

On loading the game looks quite promising. The main screen presents you with some well-drawn soldiers of Infogrames' usual high graphical standard. The game options are selected via a pointer that moves (slightly too quickly) over a silver control panel at the foot of the screen. An array of buttons on the panel access the various functions. These are unmarked and so constant reference to the manual is necessary.

NEWS FROM THE FRONT

AA's Technical Editor has just returned from some real-life combat on Salisbury Plain. Shots rang out and he looked on with horror as his combat jacket turned crimson. The ammo consisted purely of paint pellets, however, and the battleground was only Warminster Woods during a day out playing *Skirmish*...

Once you have worked out how to actually start the game, the main screen splits in half to reveal a minuscule playing area in the middle. The drill sergeant yells orders at you from the top of the screen, and awards or subtracts points depending on your success at negotiating the course. The panel, which displays your score and time, remains at the bottom. The soldier has a variety of moves, allowing quite complex actions. He runs along from left to right, the screen burst-scrolling as he reaches the edge. Sound is minimal. The tape stops to play a reasonable tune whilst loading, but the game itself is positively mute apart from one or two spot effects.

The manual is poor. For a start, it's written for the 16-bit machines, so it doesn't have the right loading instructions and lists the wrong playing keys. It even describes a video replay mode that isn't available on the CPC version. The playing instructions are slightly confused, and need to be re-read several times before they make any kind of sense.

Gameplay is disorientating, with each joystick action leading to another level of control. For instance, to shoot at something approaching from behind you press fire, then left, then fire, then down...

The gameplay is not fluent, either. Getting back to the normal standing position from any given action involves a variety of different joystick sequences. In the heat of battle you just get completely muddled and end up crawling bewilderedly along the floor instead of lobbing those grenades at the enemy.

The only skill involved in *Action Service* is knowing where the traps are, and not fumbling the fiddly joystick control. This makes it a memory game of the most tedious kind. It's pitifully easy to cheat too – you can easily complete the first two sections simply by crawling all the way! The worst of it is, you get more points doing that than you'd ever be likely to get by doing it properly.

Infogrames has been responsible for some excellent games in the past. *Action Service*, alas, is not destined to join them.... AW

SECOND OPINION

Over-ambitious is the only way to describe Action Service. The ideas are excellent, but the implementation is infuriating. Icon-driven games just don't work on the CPC. TW

GREEN SCREEN
Well camouflaged.

■ Unbearably annoying.

AA RATING35%

■ Interesting idea, but that's about it.

DYNAMITE DUX

Activision ● £9.99 cass, £14.99 disk
joystick/keys

Think of ducks, and what do you see? Cute little critters bobbing on the village pond? Orange sauce and a piping hot Sunday lunch? Or rocket launchers and boxing crocodiles? If the latter is the answer than you've been playing *Dynamite Dux*...

From the Sega coin-op comes the story of Bin, birdland's answer to Rambo. Achacha the Great has kidnapped Lucy, Bin's owner, and Bin must leave the family pond to waddle to the rescue of his beloved Lucy.

Our heroic duck waggles and jumps his way down the street armed only with his mighty duck fist (always thought they had wings!), three lives and a whole load of energy. Onto the road spills the first wave of monsters, the red dog-heads. Glove puppets without a hand, they see Bin and charge, trying to bounce some energy out of him. Your choice is either to run or punch. If you keep the fire button pressed, round swings Bin's wing – until you release the button and his fist lands with a resounding *Batman POW* punch.

This is all you have to do, wandering along meeting (or avoiding) various baddies until you reach the middle and end-of-stage monsters. Gameplay, though, is not merely a set of complicated controls but what you have to do within the game itself. *Dux* scores simple but conclusive points here.

In your path are scattered various pieces of kit: water cannon, bombs, guided missiles, flame guns and the poultry equivalent of a M16. Keep an eye on your ammo counter, and

● Cartoon magic from Activision.

if the bad guys hit you, some weapons don't function afterward, so stay sharp.

Killing monsters often means they drop a snack to replenish energy. Burgers and cake are favourites. Casks of cash can be nabbed en route too, and they earn some real points. Remember, though, that your primary task is to rescue Lucy, so don't go points crazy. After all, what's the point in being a rich duck? You haven't even got anywhere to keep a credit card! (*Don't answer that – ed*)

The monsters are real in-game entertainment. Sumo piggies, boxing crocodiles, cats with spring stomachs, squashed tigers, flaming birthday cakes, violent rock gardens and huge green serpents are but a few of them.

The levels vary in colour, but not in how they play. The routes are ever more difficult to follow, most levels giving you a choice of direction. On level one you can go via the road or the subway, and contrary to popular belief you're more likely to get mugged on the street than the underpass!

The game just oozes character. Sound effects are functional, but the graphics are entertainment extreme. The backdrops are pure Tom and Jerry, while Bin bears a striking resemblance to Woody Woodpecker. When

dying, he leaps into the air, feathers all a-flutter, looking as if he's being strangled and electrocuted simultaneously.

Few games have this much instant appeal. The small playing area is easily overlooked when you are sucked into this *Roger Rabbit* world of tongue-

● Watch out for the crocodiles' flying teeth.

SECOND OPINION

Dux is as cute as they come. A vast arsenal of firepower is at your disposal, making it great blast-em-up. The game might actually be a bit too easy, but it's great fun nevertheless.

AW

GREEN SCREEN

Certain backdrops are indistinct.

● Taking the subway on level 2.

● The first level rock guards.

● Attack of the moose-heads.

● The cute title sequence.

in-cheek ultra-violence. Playing is easy, and so – with a little practice – is great success. But in this game it doesn't matter if you finish in one night or one year, the fun factor here has gone critical so you'll be back for more. Bin the duck is a 'toon who doesn't pull his punches, or his rockets, or his bombs, or his...

Dynamite!

GRAND PRIX MASTER

Dinamic • £9.99 cass, £14.99 disk
joystick/keys

The rest of the field have just pulled away from you in a cloud of dust and you've got to catch them to retain your title *Grand Prix Master*. Drop a cog and give it a handful, it's the only way to get past them. You're riding a guided missile with brakes and as well as staying on you've got to win the race. You've sweated blood to qualify for the race and now you're going to show the rest of these losers

● A good start gets you out of danger from the traffic.

● The race is on and the riders bunch up at the first corner.

POTTED BIOGRAPHY

Jorge Martinez 'Aspar'.
Born 1962 Alcira, Valencia, Spain.
First 80cc Grand Prix Victory – Assen, Holland, 1984.
30 Grand Prix victories overall.
World 80cc Champion 1986, 87, 88, World 125cc Champion 1988.

what speed really means. Finishing isn't good enough – victory is all that counts.

Based on the exploits of famous Spanish motorcycle hero Jorge Martinez 'Aspar', the game allows you to join his dogged hunt for glory on a 'massive' 80cc motorcycle.

Viewing the action from above, it takes no time at all to get the hang of hanging on. You just press the joystick/key in the direction you want to go. The fire button works as the clutch to keep the revs high while cornering, and that's about it. Your little red rider has to use these controls to corner more smoothly, accelerate faster and outdrive all the other guys to make you the champ.

The trouble is that although the game sounds and looks easy to play, to play well it's

● 'Aspar' screams round on a practice lap.

● Rev against the clutch for a fast start.

a nightmare! Qualifying for a race is all but impossible the first time round. The times reflect those actually achieved in real races so in the simulation version you have to be exceptionally good just to share the starting grid with these real world-class riders.

There are heaps of useful features to help your riding improve, including the ability to read the track before the race and practice before qualifying sessions. But once you go for the real thing, caution has to be both observed and thrown to the wind at the same time. You need to push your moped to the limits to scrape inside the required time, but can only risk losing five bikes in the process, or your season is over.

The whole course scrolls smoothly and quickly, although the playing area is a too small for a clear idea of when the next bend is coming. The controls are different to the usual for this type of game and take a little getting used to, especially the clutch/brake mecha-

● Before the race starts you glance at the track.

SECOND OPINION

You can almost smell the burning rubber as you attempt to become the Grand Prix Master. The game is very playable and the graphics are bright and colourful. The screen scrolls very smoothly but the sound is disappointing, and reminiscent sick bumble bee. The many options include a demo and the option to watch the race if you did not qualify. On the whole, an enjoyable little game which should give hours of entertainment.

Mark Hill

GREEN SCREEN

Good driving conditions.

nism which lets you make nearly ninety degree turns while travelling at 100+!

Grand Prix Master takes a different approach to the world of racing. It goes for realism, and rather than having to find friends to play against you race the computer over a season. The small graphics are easily controlled, making the game instantly accessible – but the level of skill needed to get into a race, let alone win one, means it could also quickly become the most despised game in your collection. *GPM's* fun but infuriating, fast but (maybe fatally) flawed on the difficulty front.

TW

NOW YOU CAN LOAD COMPUTER GAMES FROM YOUR COMPACT DISC PLAYER

CodeMasters have developed their new CD Games Pack utilizing the latest CD technology to give you **30** top award winning games on one compact disc. Digitally recorded to make load errors a thing of the past, even with the games loading in as little as 20 seconds. All you need is a Spectrum, Commodore 64 or Amstrad CPC and a normal music Compact Disc Player.

ADVANTAGES OF COMPACT DISC GAMES

■ Instant Track/Game selection ■ Mega fast loading – as little as 20 seconds ■ Maximum reliability, virtually no load errors – Digitally Mastered, Digitally Mixed, Digitally Recorded – DDD ■ Massive storage capacity allows for many games on one compact disc ■ Easy to use.

THE CODEMASTERS CD GAMES PACK INCLUDES:

- CD cable – to connect your CD player to your computer
- software – to allow ultra high speed loading
- Compact Disc – containing 30 excellent games.
- Full instructions – how to load and play the games.

OTHER

"Amstrad Basic Course" compiled by professional lecturer makes learning pleasurable. No commitments, purchase each lesson separately for cost of magazine. Cancel anytime, includes helpline. Details SAE 68 Northfields, Clowne, Chesterfield S43 4BA.

This section offers you a really cheap and effective opportunity to speak direct to 38,000 CPC owners - or would-be owners. Users report excellent results. You can place an ad up of up to 30 words for just £5.

So you could use it to sell a printer, launch a user group or advertise a piece of software you've written. One thing you can't advertise is the sale or swap of software. Such ads can be misused by pirates.

Fill in the application form and send it to us together with payment. We'll place the ad in the next available issue (published 2-7 weeks after we receive your order).

BALROG

Balrog reads up on his classics as he tackles Topologika's Avon...

Avon

£14.95 disk only • Topologika •
PO Box 39, Stilton,
Peterborough PE7 3RL (0733
244682)

Balrog loaded Topologika's latest game with trepidation. As dedicated Pilgrim readers will know, the Pilg never seemed to like any Topologika game due mainly to the absence of the examine command – would Balrog like Avon or not?

Avon is a light-hearted look at the world of Shakespeare's plays (perhaps the real Bard's Tale?). You are a typical American tourist visiting Stratford-upon-Avon, but all is not as it seems... an asp in a pet shop tries to bite you, you could swear that a nearby pine tree groaned at you when you walked past and the three old ladies in the shop acted very peculiarly when you tried to buy their cauldron!

Perhaps your suspicions can be attributed to your own paranoia... but before you know what's happening you find yourself standing in a place unlike Stratford-upon-Avon in one way, yet like it in another. Like the world of Shakespeare's plays, in other words.

As in all good adventures you must discover the route back to the real world – in this

'All hail, great master, grave sirl
Hall! Welcome ever smiles, and
farewell goes out sighing...'

In this light-hearted but immensely challenging look at The Bard's world through the keyboard of modern man, you find yourself, after watching too many Shakespeare plays (or perhaps reading them) wandering around a strange land. Here they use a richer language than usual, and some of the scenes remind you of certain Shakespeare plays. How you are going to return successfully to the present day is something that you will have to find out for yourself.

Why does the adventure take place on three different dates? What is the significance of the lady Portia's caskets? Why does Yorick sometimes say 'Golsider' and sometimes something else? Why do you suddenly find yourself wearing an asp's head? These are just some of the tantalising puzzles that you'll meet when you welcome AVON. An exhaustive knowledge of the Shakespearean Canon is not necessary as, in most cases, just the problems rather than the solutions are taken from Shakespeare. If you get really stuck, Topologika's much-praised on-line 'Help' system is there to stop the sighing.

AVON is Jonathan Pertington's first release since his best-selling KINGDOM OF HAMLE (also available from TOPOLOGIKA).

Has been TOPOLOGIKA

Countdown to Doom

Queen Killer

Return to Doom

AVON

a Shakespearean
tragedy of
our time...

by Dr. Jonathan
Pertington

instance to save yourself from being held forever in Avon.

Avon is well-written, with many objects, locations and characters taken from Shakespearean plays. Thus there are daggers, eyes of newts, witches and many other weird and wonderful creations – including, of course, blood on hands!

At this point Balrog would like to stress that knowledge of Shakespeare is not needed to complete Avon. Although all the various objects and locations are derived from the Bard's plays, the actual puzzles are the same as in any adventure. In short, you don't need an English A-Level to play the game!

The puzzles are difficult in places and quite original, and although the parser is not as powerful as, say, a level 9 game, it is still very comprehensive.

As with all of Topologika's games, Avon is text and disk-only with on-line help, lots of

descriptive text and atmospheric locations.

Balrog's criticisms of Avon? Well, the absence of the examine command is annoying. I must admit that I agree with the Pilgrim on his views that a properly used examine command can add to a game but, having said that, Balg soon got used to playing the game without examining objects and didn't feel it reduced his enjoyment. The only other criticism with the

game is that it takes about two minutes to load, as the instructions are printed on the screen every time you play. It's a shame that a short cut could not be found to avoid this wait.

Not one of the most technically accomplished games, but very amusing and enjoyable. A good all round adventure (with an enhanced version of *Monsters of Murdac* – AA rating 75% – on side 2) that deserves to do well.

Panic Beneath the Sea

£1.99 cass, £4.50 disk • John
Packham • 60 Hightown Towers,
Warburton Road, Southampton
SO2 6HH

Panic is a two-part adventure GACed from the keyboard of John Packham. In it you play the part of an unemployed detective sent on a dangerous mission by your government – to dive down to a sunken ship and retrieve some nuclear isotopes before anyone else while avoiding cyborg enemy agents. Not one of the most original plots in the world!

Part one of the game has graphics, starting with you sitting in your office and deals with finding a ferry to take you to the sunken ship. Part two concerns searching the sunken vessel for the nuclear material.

Balg quite enjoyed this game. Although the graphics are nothing to

rave about (as with most GAC games), and the parser is unfriendly in places, the puzzles are well thought out and cleverly implemented. These provide the main enjoyment of the game, and in part two especially they can be very devious!

This is John's first game, but definitely not his last, and although enjoyable it is let down by its poor parser and plot. John certainly knows how to write a good game and Balg looks forward to reviewing his next release *City for Ransom* soon...

Atmosphere.....49%
Interaction.....56%
Challenge.....66%
AA Rating.....57%

Clue pot

These clues are from David Owen, Jerome Young, Stuart Whyte, Tim Bell, Joan Pancott and of course Balrog himself. If you don't want any help with adventuring avert your eyes and plug your nose! Special thanks to Andrew Helsby for the *Suspect* map. If you've got any hints, tips etc, write to Balrog, Amstrad Action, 4 Queen Street, Bath BA1 1EJ.

Colour of Magic

Start of Part 1: Inventory, stand up, translate, Twoflower asks you to be his guide, yes, talk to Broadman, say show room to Twoflower, go widdershins, get saucer of milk (drop it when you find the cat), t, r, up, w to Bedroom (see Twoflower and the Luggage), t, d, h, u, out to Courtyard (Give coins to Beggar and Cripple Wa, it will help you later).

Corruption

Use your card to get into Bill's office, and break the drawer with the screwdriver.

Crystal Theft

Start: Examine katana and pistol, south, down, south, cut bush, drop katana, east, south, read markings (ROYGIV), north, get and examine cube, west, south, west three times, east, up to Basalt Pillar, drop pistol and cube, up, get and examine plastic card, down, get pistol and cube, down, east, get and examine power pack, down, get and read book (ANRRH), south, south, west, south, east, south to Cave Mouth, drop cube (needed later) and power pack (it will disappear, but has no use other than scoring 50 points), north, west twice, get and examine wire, west, east, north, get, examine and wear helmet, west, south twice, east, south, drop plastic card, south (note orange light).

Forest at the World's End

- Wear ring to enter the witch's hovel and retrieve key.
- Use rope to descend into the volcano to get the chest.

HELP!

- Alec Chapman has written to Balrog asking for help on *Mindfighter* – "I want to get in touch with the girl Helen. I've a phone book, photo, letter, file, pill and have scored 84 points after eating the pill." If anyone can help Alec then write to me and I will print the answer next month. I have included some clues for *Mindfighter* for Alec which may be applicable.
- Tim Bell sent in the *Stationfall* tips, but is stuck himself – "I can't get the safe open or find the explosive. I also have a serious food problem."
- P J White is stuck in *Jinxter* – "I have got to the end of *Jinxter* and when Jannedor comes to the fireplace the fan falls off the wall in the kitchen and she goes away." Can anyone help him?
- Andrew Helsby drew the *Suspect* map on p74 but has some problems – "How do you get into the barn, and is it possible to go up the stairs?"

Mindfighter

- To destroy the ship, empty the petrol, burn the rag with the lighter, and run off the ship. After finishing your tasks in part one, go to the fence and metamorphose to fly across it.
- In the vents, the only rooms that need to be visited lie E and S.
- Look inside the medical room to find a uniform.
- Dressing like other officers will allow you to move safely through the complex.
- Take off your uniform when Jimmy's around.

Stationfall

- To get the medium drill bit you may need to delegate.
- To catch a falling star try ballooning. Beware the old flame.
- To get the coin, shoot the box.
- To get an object out of the PX you will need an ostrich to chase a stick.
- The balloon creature may be friendly to spacers, but his feeding habits are definitely not ozone-friendly!

Jewels of Babylon

- To get the spear, give the watch to the native.
- To pass the lion, give it some fish.
- Kill the octopus with the spear.
- Throw gunpowder at crocodile, light match, throw match at crocodile.
- To find the key, place plank across pit.

Panic Beneath The Sea

- Search coat
- Push book to reveal secret exit. Pull it to close exit.
- Cut the cable with the knife from the dining room.

Avon

- Kiss the statue of the woman in the chamber with white pillars.
- Eat the bread before you enter the competition in the Boar's Head.

JUST FOR LAUGHS

Come on you Balrogites! Send in your amusing responses! This month's are all thanks to Phil Jarkon of Sale...

Enchanter

- Have you used Cleesh on Krill? The adventurer? Yourself? The guards?
- Tried writing on the spell scrolls with the pencil?

Emerald Isle

- Type XZZY.

Panic Beneath the Sea

- Type CHEAT.

BALROG'S POST

'It's great to have an adventure column back – please don't ever leave again. Thanks for the tips on *Pawn*. I couldn't get anywhere with it. Please can we have some more. AA's 4th Birthday edition is fantastic – you have the best adventure column in the world.' says Julie Humphrey of Swindon. Thanks Julie! Any tips for *Pawn* will be gratefully received and Balrog is positively ecstatic with all the compliments you have given the column.

Balrog has received his first letter from a Spanish Amstrad owner, Noel Llopis, and he has some very interesting comments for the Programming with the Balrog feature 'Why not give it a new look? Instead of a programming course, it could be a tips and routines section for adventure game creators.' This is the best idea Balrog has received for the Programming series, so if you have any useful routines or pokes for any adventure writers, write in and tell me.

For example, how about a picture-loading routine for *PAW* or a syntax analyser for *GAC* to tell you which words the parser doesn't understand. Noel also says 'How can I include my own routines in *GAC*? For example IF (VERB 7) CALL &A000' I know that *PAW* supports external routines, but can any one out there write one for *GAC*?

The Lords and Ladies of Adventure

Once again three more intrepid and courageous adventurers join the ranks to give aid and comfort to you – treat them with the respect they deserve! (But don't be afraid to write!)

Don't forget that to write in offering your services to other less fortunate adventurers is a great way to make friends around the world. So if you want to reach out a helpful hand, write in today with details of the games you have finished and can offer help on.

Please remember though to enclose a SAE when writing to a Lord or Lady, otherwise they won't reply!

CONTACTING BALROG

Balrog is hungry for letters! So if you've just completed an adventure, found an amusing response, know of some tips for adventure creators or anything else, then write to him c/o Amstrad Action now!

Balrog promises that even if he doesn't like your letter he will still only eat it and not you...

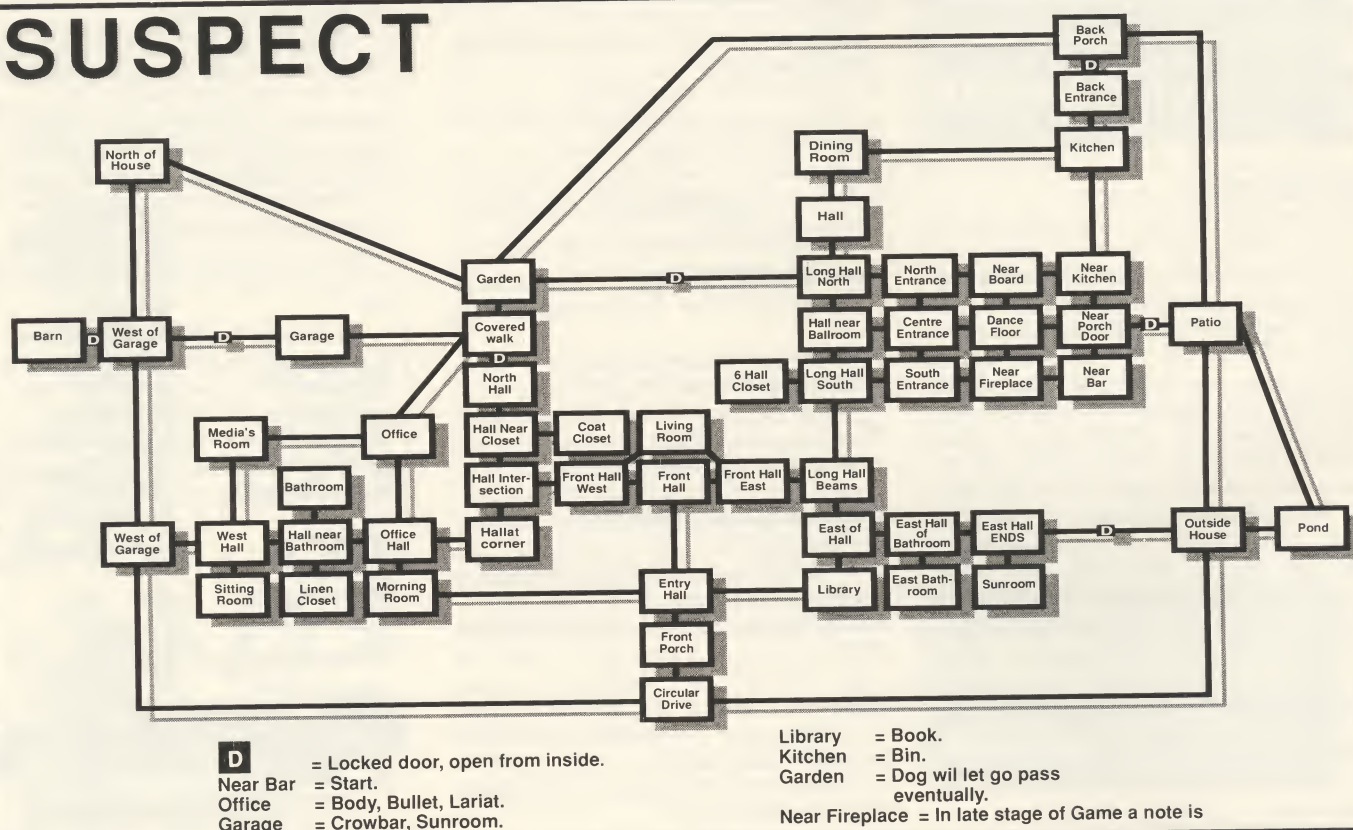

Clubbing together

Do you run an adventure club? Or are you a member of one? If so, Balrog wants to hear all about the services offered, how much (if anything) they cost, how many members there are etc. Balrog will soon be doing a round-up of all the adventure clubs out there, so write now!

Bards Tale Club

You may have seen the *Elite Club* elsewhere in AA, but Balrog reckons a *Bards Tale Club* is a much better idea as the game is over eight times as large (330K versus 42K) and better. So, if you want to become a Bardist, write to Balrog and joint the *real Elite*!

SUSPECT

TYPE-INS

New boy ADAM WARING introduces this month's keyboard kapers

NIM II

Nim II is primarily an educational game for 5-10 year olds, but can prove to be a challenge for older players too.

The program's author, Mark Walker of Warley, describes the program as a sort of mathematical numbers game. When the program is run a random number between 10 and 20 is displayed. This is the target number, and the player and computer take it in turns to select tiles, numbered between one and nine, attempting to get a combination of values that adds up to the target. The strategy comes in as you attempt to prevent your opponent from reaching the number, as well as trying to reach it yourself.

CONTRIBUTIONS

If you think your program is good enough to be published in Type-Ins then send your program on disk or tape (not listings, we simply don't have the time to type them in) with as much documentation as possible. Every listing published will earn its author a CASH PRIZE, so get send those routines to:

Type-Ins
Amstrad Action
Fututre Publishing
4 Queen Street
Bath BA1 1EJ

• Sorry, but if you don't enclose an SAE you won't get your tape/disk back!

```

EVAL

● 464 ONLY

In response to Shabaz Yousaf's request for an EVAL command (*Forum* AA50), Seg Gorham from Wakefield has submitted a routine to serve that very purpose. The BASIC listing generates an RSX that's relocatable anywhere in the central 32K. Syntax is simple, if you wanted to evaluate the expression $x=x+1$:

```
a$="x=x+1":|EVAL,@a$
```

Since the routine makes several calls directly to the BASIC interpreter in the upper ROM (tut tut), it will only work on CPC464 machines.

```

```

SUPERBASIC

Norfolk's George McIntosh has written *SuperBASIC*, a programmers' toolbox written in machine code for use in BASIC. It includes many of the commands missing from the 464. To use the commands, simply type the "|" symbol (located two keys to the left of the [ENTER] key, using shift and the "@" key), then type the command name and the required parameters, if any. For example, to emulate the 6128's GRAPHICS PEN 1, type:

```
|GPEN,1
```

Here's a list of all the RSX commands available, along with an explanation of what they do...

HIGH	Selects the high screen memory, located at &C000
LOW	Selects the low screen memory, located at &4000
OR	OR's the current screen against &ff
AND	AND's the current screen against &ff
XOR	XOR's the current screen against &ff
MON	Turns on the cassette motor
MOFF	Turns it back off again
ZZZ[,x]	Waits until the specified character is typed, or until any key is pressed, if none are specified
LEFT	}
RIGHT	}
	These scroll the screen one unit in the specified direction. One unit is about 4 pixels
UP	}
DOWN	}
LIST	Lists all the SUPERBASIC RSX's available
RON,x	Turns on the repeat function for the specified key
RON,x	Turns it off again
GET,@x%	Returns the ASCII Value at the current cursor location into the variable specified. The variable must be defined by using "x%=0", and the "@" symbol MUST be used.
GWINDOW,l,r,t,b	Defines a graffix window.
GPEN,x	Sets graffix pen
GPPAPER,x	Sets graffix paper
SHIFT	Toggles the SHIFT LOCK on and off

"Look out for great
new games in the
Cartoon Time
range from
CodeMasters"

SPECTRUM, AMSTRAD CPC,
COMMODORE 64

No. 1

COLLECTOR'S
EDITION

FRANKENSTEIN JNR.

Take control of The Monster in this hilarious Cartoon Adventure.

All Cartoon Time Games feature special Cartoon Characters, some you will already know, others like FRANKENSTEIN JNR. are new to the World of computer games.

The Cartoon Time games are a Collector's Series, each with its own unique number. Look out for the great Prizes from Character T-Shirts to Trips to DisneyWorld!

```

|CAPS    Toggles the CAPS LOCK on and off
|ASK     Gives states of SHIFT and CAPS locks
|INVERT  Swaps paper and pen colours
|SCROFF  Turns the screen display off
|SCRON   Turns it back on
|FRAME   Waits for a frame flyback
|UNSC    Does something odd to the screen
|FADE    Fades the screen away

TYPE-IN TYPOS

Whoops! It seems that a few errors crept into these pages last month, judging from the furious letters directed at yours truly. All programs are fully tested on both the 464 and 6128 before inclusion in *Type-Ins*, but unfortunately after these pages have left my capable hands they have to endure two terrifying processes before appearing in print.

Firstly our editor, Rod 'Slasher' Lawton casts a scrutinising eye over my copy, hunting down spelling errors (*they don't need hunting - ed*) and laying the text down on a page. *Fracland* wouldn't quite fit, so some REM statements were removed to save space. This is why some GOTOs came out pointing at non-existent addresses.

Secondly, it's off to the art department, where art editor Ollie puts in the pretty boxes, and any text that stands in his way knows the meaning of fear. This is where the ends of programs can get lost, obscured by the artistic additions. A system does exist to prevent this happening, the inclusion of bullets (●) at the end of each listing, but with me being green (and environmentally friendly!), I forgot to put them on. A program which suffered from this was the *Fireworks* listing. Line 100 should be added to read:

```
100 NEXT:GOTO 50
```

A couple of 'I's appeared at the end of the last line on two listings. These should be ignored. Apart from that, no...er...problems at all...

DISCBASE

The **only fast disc-file organizer** for CPC machines...
 "99% of disc users will find DISCBASE indispensable" AA Apr 89

DISCBASE is a specialised database for keeping track of your disc collection and the files on them.

To build up your database, simply insert each of your discs in turn and the program automatically reads them. Then you can search to find any file in UNDER 1 SECOND !

- ★ Flick through discs as CATs
- ★ Comprehensive file and disc lists
- ★ Automatic disc update
- ★ Hard copy of lists or CATs

Rrp £11.95. P&P UK free, please add £1 for Europe, £2 for Rest of World.

MAKE YOUR AMSTRAD EARN

Yes making money with your Amstrad becomes incidental when you know how. Your micro is, if only you knew it, a gold mine. The size and make is irrelevant. Make the initial effort **NOW** by starting your own

HOME BASED BUSINESS

This may be the most important move you will ever make!

REMEMBER: You'll never get rich by digging someone else's "ditch". Anyone in the country, including YOU, can become very rich in a relatively short period of time just by doing a few basic things! It's more rewarding than playing games. The benefits are many and varied. Full or part time. For **FREE** details send S.A.E. to:

SCREENVISION TURNS YOUR MONITOR INTO A COLOUR TV!

AT THE AMAZING OFFER PRICE OF **£64.95**
Door to Door Insured delivery add £6 INC VAT

USE YOUR AMSTRAD CPC464, CPC664 & CPC6128 MONITOR AS A COLOUR TV SET!

Screenvision is a modern 'State-of-the-Art' TV Tuner which simply connects to your monitor, using the existing lead and converts it to an outstanding colour television.

Screenvision has more features than any other TV Tuner and costs less! Each tuner has seven pre-select push button channel selectors, separate controls for brightness, colour, tone and volume and has built in Speaker, Colour and Automatic gain control.

Unlike other products, Screenvision also connects to a host of other Monitors should you change your system.

CHEAT MODE

Thunderbirds are go! with another FAB crop of tips

You can't keep a good game down, and we've been flooded with solutions to Grandslam's *Thunderbirds*. We've compiled the best of them all and let our AA cartographer loose on them. These excellent and indispensable maps to the *Mine Menace* and *Sub Crash* are the result. So you can go International Rescuing with renewed vigour. This is Thunderbird Six 'Over and Out'

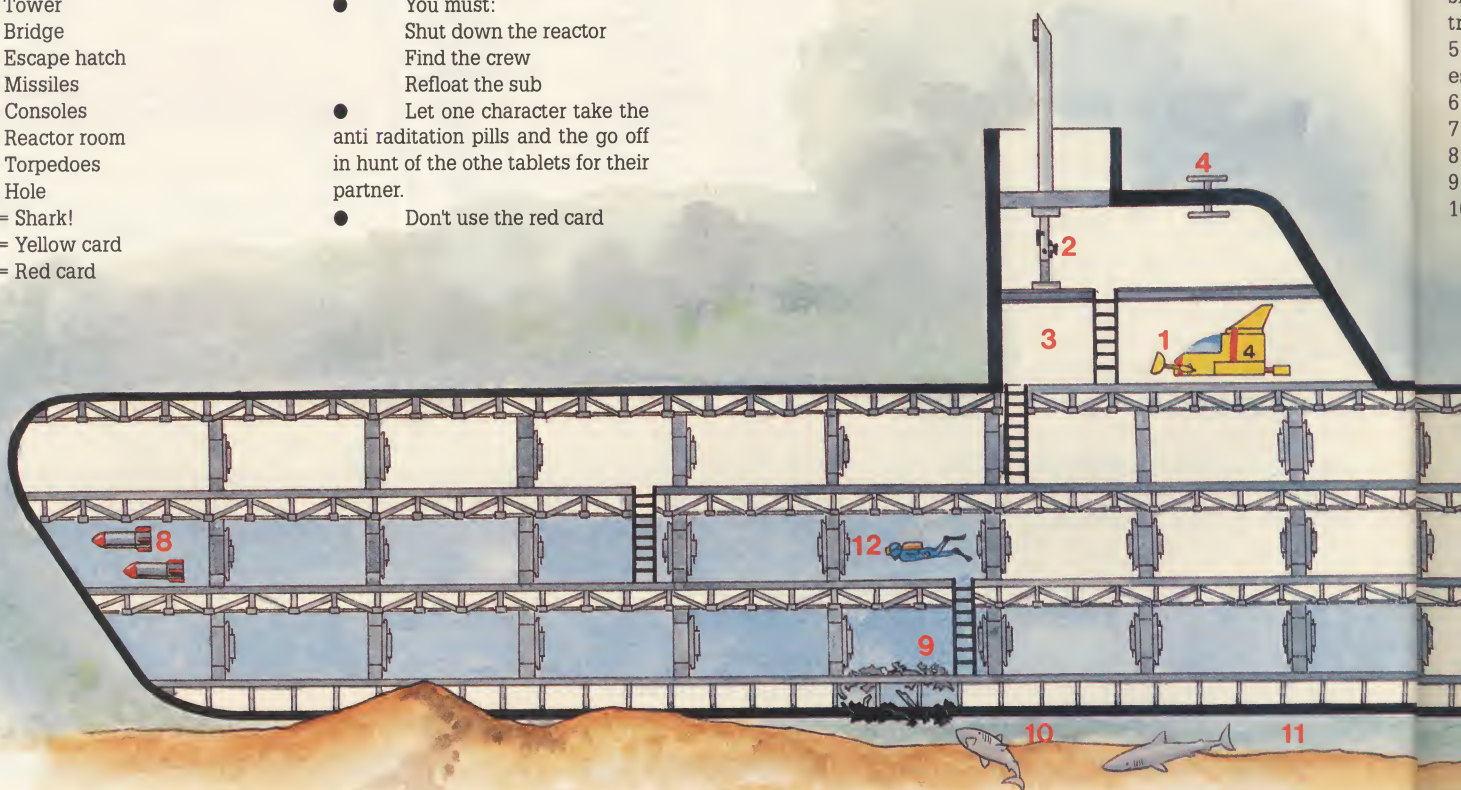

KEY

Sub Crash:

- 1=Thunderbird Four, starting point.
- 2= Tower
- 3= Bridge
- 4= Escape hatch
- 5= Missiles
- 6= Consoles
- 7= Reactor room
- 8= Torpedoes
- 9= Hole
- 10= Shark!
- 11= Yellow card
- 12= Red card

TIPS

- Both characters must have an aqualung, one anti-radiation pills, the other shark repellent.
- You must:
Shut down the reactor
Find the crew
Refloat the sub
- Let one character take the anti radiation pills and the go off in hunt of the other tablets for their partner.
- Don't use the red card

KEY

Mine Menace

- 1=The Control room, Alan's starting point
- 2=The Mole, Brain's starting point
- 3=Tool room, the compressed air drill
- 4=A ladder (used to cross the shaft) but it's only good for three trips
- 5=Stepping on these ladders causes them to break!
- 6=No lights
- 7=The mine car
- 8=Rockfall
- 9=Lift
- 10=Cable for compressed air drill

- 11=Compressor
- 12=Door
- 13=The trapped miners
- 14=Spanner
- 15=Hammer
- 16=Bucket lift
- 17=Plunger
- 18=Broken valve
- 19=Wire
- 20=No lights
- 21=Dynamite
- 22=Blocked by rocks.

TIPS

- Start each character with a torch and Alan must have the oilcan
- Use the grease gun to lubricate the wheels of the mine car.
- The fuses have to be inserted to make the lift work.
- Connect the Drill, the Cable and the Compressor to drill through the door.
- Move Brains first as the cavern floods!
- Get the spanner, and the plunger (for the dynamite) and go up to mend the broken valve to shut off the water.
- To use the bucket lift, hit it with the hammer. Use the wire, plunger and the dynamite to shift the rockfall.

PRINT COLOUR GRAPHICS

At last it is possible to get colour screen dumps from a 6128!

COLOUR DUMP 2 is available exclusively from M.J.C. Supplies and will take a standard screen file from **Advanced Art Studio** or created with **AMX Art**, and print it out in full colour on a **Star LC10** colour printer. You choose which colours on paper, represent which inks on screen for total control and variation. Also works on Epson compatibles inc. **DMP 2000/2160** with coloured ribbons.

COLOUR DUMP 2 - £12.95
ADVANCED ART STUDIO - £19.95
STAR LC-10 COLOUR - £239.95

PRINTERS

All printers listed have a ten inch (A4) carriage, are Epson compatible, and feature friction and tractor feed mechanisms for continuous or single sheet paper. All prices include the necessary cable

CITIZEN 120-D

Cheap Epson FX-80 compatible giving a range of text sizes and effects in draft mode. Limited sizes and effects in NLQ
£139.95

PANASONIC KXP - 1081

Offers all the draft mode text sizes of the D.M.P. 2160, but is better built, more reliable, and offers N.L.Q. in all sizes and effects, for only £10.00 extra! Highly recommended.
£159.95

STAR LC-10

As well built and reliable as the Panasonic. Has four N.L.Q. fonts (typefaces), in combination with all sizes and effects. New low prices makes it well worth considering
£179.95

STAR LC-10 COLOUR

All the features of the LC-10, but with a seven colour option for colourful text. If you want colour graphics please call first for advice.
£239.95

STAR LC 24-10

24 pin version of the LC-10. Has 5 excellent letter quality fonts available with all sizes and effects. Two extra effect, outline and shadow are also featured. Good value.
£269.95

RENEGADE III

THE FINAL CHAPTER

Enjoy *Renegade III* but can't be bothered to fight your way through all those levels every time? **Anthony Bailes of West Rainton** has the solution for jumping levels. When you get to the first menu, press Q and T together (do it a few times to make sure) and then start the game. Once the level is loaded press Q and T simultaneously again and you go to the next level! All a lot more friendly than the traditional way, don't you think?

Insider dealing

PHIL HOWARD tells you how to make your CPC look like a Spectrum (the swine), waxes lyrical about protection rackets (the dog) and explains a few hacking terms for the uninitiated (oh well, maybe he's not so bad)...

Don't you just hate those people who are always slagging off everyone else's computer, insisting that theirs is best? Personally, I think that the Spectrum is a great little machine (oi, *wash your mouth out!* – ed), which, in its day, must have been as near to the cutting edge of technology as Sliced Bread or Madame la Guillotine are today, and probably as popular.

However, any self respecting CPC owner, with the opportunity to eat cake, so to speak, would be loath to transform their lovely and colourful display into the postage stamp boasted by the Speccy (*that's more like it* – ed). But, as always, the programming fraternity, in their constant quest for a fast buck, on occasion take raw Spectrum code (which is also Z80-based); make a few minor modifications, and dump it direct into the CPC. And then publicising a new title for the Amstrad, but failing to mention it was carbon copied from a less than "state-of-the-art" original.

The most significant alteration they need to make is to the actual size of the display area, shrinking the CPC's glorious 40 x 25 character screen down so that it can accommodate the Spectrums more modest 32 x 24. The easiest way to achieve this is to reconfigure the hardware by altering data in the chip that controls the display – the Cathode Ray Tube Controller.

The CRTC has 16 registers which are set up when the machine is switched on. Each holds some information on the screen display. There are four that are of interest here:

● 1) Basic listing SPECSCRN. This program alters the size of display on the TV screen to Spectrum size (see what you're missing!) then to size used on *Moon Cresta* then back to CPC.

Spectrum screen in this way but also the tall thin screens used in games like *Moon Cresta* and *Gothik*. One point to note, however, is that if you change the size of the screen the computer's own display software will not be able to cope, as it still "thinks" in 40 x 25 and insists on using its full 16K quota of memory. Try the listing and see what happens.

Just to deviate for a second, you may have wondered why Spectrum games have a tendency to run faster than the CPC's, when it is obviously an inferior machine. The reason is that it not only has a screen smaller, but also a less sophisticated design requiring a smaller amount of memory to display the colours. Consequently, the processor time required to shift the screen about is considerably less, as is (you may have noticed) the graphic quality.

Before we get away from this IN/OUT business, there is one last thing that is worth mentioning. The PPI chip's "C" channel contains control of the tape motor; by setting or resetting bit 4 of port &F600 you can turn it ON or OFF.

OUT &F600,&10 .. to turn motor on
OUT &F600,&00 .. to turn motor off

● Yes, you too can make your CPC look like a Spectrum... ugh!

- No.1 – No. of Characters Horizontal
- No.2 – Display Position Horizontal
- No.6 – No. of Characters Vertical
- No.7 – Display Position Vertical

The method of alteration is, once again using OUT instructions, to tell the chip which register needs changing on Port & BC00, and then sending the new data on Port & BD00.

Not only can you create a copy of the

It is often handy when looking through tape loader programs to know where the actual loading finishes. Normally the instruction OUT zero to port &F600 signifies the end of the load routine, that is where the tape turns off.

Increase your chances

You will have become used to the idea of searching a program for the location where the lives are reduced, this being the position in need of alteration.

It's worth remembering that

during a game lives can be not *only* reduced, but also increased. When a certain score is achieved or a special function fulfilled, extra lives may be awarded.

Should the on-screen representation be *numeric*, the chances are that the programmer will have only allowed one character space for display; this means that the lives can't be allowed to go above nine. In reality it's not very likely that this will happen any-

way but, just in case, the program will need to make provision for it. The instruction &FE,&09 (Compare what's in the "A" register to &09) is likely to be the check. A search for &FE,&09 in conjunction with (probably) &3A,XX,XX (ld A,lives), &3C (inc A), &32,XX,XX (ld lives,A), will give you the memory location where the lives are stored. It's then fairly straightforward to find where they are decreased.

This method can also sometimes be used on games which show a *graphic* representation of the number of lives left. You can often tell how much space is allocated and deduce the maximum allowed, then instead of searching for &FE,&09 you look for the maximum graphic positions. In *Thunderblade*, for instance, the game provides space for a maximum of 5. Searching for &FE,&05 turns up the location where the lives are increased, indicating that they are stored at &0097. A second search for this location finds the place they are reduced - &11A2.

This game is slightly unusual in as much as it doesn't check for the lives reaching zero, but instead checks for one less than zero (&FF) at &11AD, providing an extra life, 6 in all (5 on-screen and one in play).

They seek it here...

For Protection watchers amongst you, it seems like a long time since

Ocean/Imagine modified the speedlock on its tape games. The last thing, as I recall, was when the programmers changed the length of the information block, wreaking havoc with copiers everywhere.

This time, it seems Ocean has tried a different approach and planted something evil within the protection loops that disables the disk system - which, surprisingly enough, survives a soft reset. It's quite a shock after getting used to patching &BD16 to find that the dirty has already been done, and just as the new copyright laws come into force too... Are they really this clever?

I've only come across this on one game so far - *Red Heat* - but it occurs to me that this

may be aimed at the Multiface copiers and, if that's the case, then it's not only a pretty neat idea, but it may stop Black Box copying stone dead. So be prepared for dormant disk drives.

It's normal in this pre-festive season to find a new

wave of protection washing over the Christmas games. If this is it, then I'm pleased they've targeted the copiers, not us.

A frog's legacy

I've been messing around with a tape protection on Ere Informatique's *Bubble Ghost* of late, thinking that it was a new system. I find that the company has been using it on disk

THUN-DEC

```
1196 3E 07      LD  A,7
1198 32 04 E1   LD  (0E104H),A

● 2) Disassembled listing THUN-INC. at &2F5B. From *Thunderblade*. Check for maximum of 5 lives at &2F66. If less, then increase at &2F6A. Lives are stored at &0097.

A NUMBER OF THINGS

I've had a short note from Peter Hall of Basildon who says that although he thinks that there are many people who are interested in finding out about poking games, there are also a lot of newcomers who need more basic information and that an explanation of some of the "computer talk" would be helpful. I'm sure he is right, so the following may help to rectify the situation a little.

Firstly, there are three types of numbering system used within the computer,

- Decimal, which we are used to, because we have ten fingers
- Binary, which the computer uses at its lowest levels because it only has 2 fingers (electrically On and Off)
- Hexadecimal, which is a half-way system based on the number 16 - used because it is compatible with binary, and almost sensible to us.

Once again, all types are catered for in Locomotive BASIC. If you have some spare time (has anyone?), it's worthwhile using the computer to convert numbers from one system to another, just to get used to the differences. A convention used by the CPC when using hexadecimal numbers is to precede them with a "&" as an indicator. Some disassemblers use an "H", some listings use a "#" (hash). You will notice that hexadecimal numbers not only consist of the numbers 0-9 but also the LETTERS A-F; this enables the system to keep all numbers (0-15) as single characters 0-F.

Everything you see and hear from the computer, from the motorbikes racing past in *Renegade* to the 3D manipulations of *Driller* to the musical wizardry of *Zynaps*, are all created from a bunch of numbers in the range 0-255 (&00-&FF). There is nothing else. It is the

machine's interpretation and the sequence they are arranged in that creates the illusion. So, in machine code terms, don't expect to find a ready-made instruction like "Move the motorbike", "Play the tune" etc. Each pixel, each calculation, and each note must be individually manufactured and controlled.

The tape or disk on which you buy the program is only a storage medium.

● Loading a game takes the information stored on the disk/tape byte by byte and changes the memory of the computer to match. It is in fact copying (am I allowed to say that?) the game into the computer's memory, where the program eventually runs. Once the game has loaded, the tape/disk is no longer used and it can be removed altogether.

● What a POKE does is to alter the computer's memory once the program has been loaded in, thus changing the way the game plays. There is *no* way that by poking a game you can alter the information that is stored on tape, and, if a poke doesn't run as it should, no damage will result. Simply switch off and start again.

Game tapes are always write protected (the tab at the back is poked out), and it is virtually impossible to overwrite or modify the stored program.

In the same way, disks are usually write-protected. If this is the case then no damage can arise. There have been pokes in the past, however, which have required removing the write-protect and changing the data on the disk. If you doubtful (as I am) about this, *don't* try the poke. If you make a mistake, or the poke is wrong, the entire game may be ruined.

Leave the write protect *on* and you will not change the stored information.

games for a quite a while (*Prohibition* and *Purple Saturn Day*). Not getting the chance to see many of Ere games it's new to me, and it turns out to be quite a stinker. Ere has always gone in for complex systems, which breaks with the British tradition. Even back in the days of *Get Dexter*, when we were still playing about with the ghastly Lens Lock, Ere produced a system of awful proportions that

was very nearly the best I've ever seen. Shame they only used it the once.

Anyway, the new one makes a pleasant diversion from the same old Imagine / Ocean / US Gold protections, and is worth an afternoon of anybody's time. It's almost better than the game itself, but then I suppose I'm biased. If you're interested, have a look at the hardware interrupt system at & 38.

AA Buyers Guide

This is the place to find what software and hardware is available for your CPC. We list programs by category, and provide producer; phone number; price; issue in which the item was reviewed; and last but not least, a brief description of the program's features and, where appropriate, shortcomings.

But don't take our word for it: if you're in doubt read the original review before you splash out, and make sure by asking the person you're buying from that it meets your particular needs. Best of all is a try-out, if you can find a friend who has what you're thinking of buying.

WORD PROCESSING

Brunword 6128

Brunning Software ☎ 0245 252854

£16.50 tape, £25 disk ● AA24

40 or 80 column mode; spell checker loaded into extra memory. Suitable for expanded 128K machines. Superscript/subscript effects on-screen. Includes Datafile. Available as "Junior Brunword" at £12.95 in slightly cut-down version.

Pendown

Logotron ☎ 0223 323656

£19.95 disk ● AA18

A complete tutorial in the theory and practice of word processing – it's great fun, too. Open system, owing much to expensive DTP packages.

Protext

Armor ☎ 0733 68909

£19.95 tape, £26.95 disk, £39.95 ROM ● AA3

Lightning fast on all tasks involving screen. True merging from separate files and disks to the cursor position is easy,

Pyraword

Discovery ☎ 0742 753423

£14.95 tape, £17.95 disk ● AA18

Similar in use to Discovery's Pyradex. It loads a profile of inks, printer codes and character set. Word counting, changing disk drives etc – "housekeeping" tasks – are handily located. Uses extra memory of 128K machines for spooling printed documents and storing text. True file merging is impossible, and control keys are odd. Margins cannot be set further apart than 80 columns, although placing a printer control character at the right hand side allows wider documents to be printed.

and Protext supports standard CPC RSX's like DISC, TAPE, CAT etc. ROM version is excellent. Bad points: maximum file space limited to machine memory – about 22K on disk, 38K for the ROM version. As used by AA, if that's any recommendation (don't answer that).

Tasword

Tasman Software ☎ 0532 4388301

464, 464D, 6128, £19.95 tape, £24.95 disk ● AA1

464 is the tape based version (the same as Amsword). 464D has enhancements for a disk drive. 6128 makes full use of a 6128's extra memory. The latter pair include mailmerge facility. Easy to get to know: comprehensive help screens. Screen operations are slow, but may be customised for greater speed.

Wordstar

Micropro/Cumana ☎ 0483 571666

£49.95 disk (CPM) ● AA1

Files can be as big as the space available. A professional program, with huge manual and a layout like mission control. If you want a function, it is in there... somewhere. Not fast.

PRINTERS

Manufacturers' recommended retail prices are listed as guidelines, but heavy discounts are offered by retailers.

Amstrad DMP/2160

☎ 0279 454555

£149 including VAT ● AA6

Load through front: printer must be above paper; but loading continuous stationery is easy. Poor NLQ mode. £5 for ribbons. Low priced, rather than a bargain.

Amstrad DMP3160

☎ 0279 454555

£199 + VAT ● AA29

Similar to but faster than DMP2160. Accepts all IBM and Epson printing codes. NLQ is front loading system. Good buy.

Amstrad DMP4000

☎ 0279 454555

£349 + VAT ● AA20

A real text cruncher. Wide carriage, and really flies across the paper, up to about 200 cps (in NLQ about 50 cps). Fonts available: standard 9 pin Pica, Elite, condensed etc. – but they are different, rather than just adjusted spacing for the same characters.

Amstrad LQ3500

☎ 0279 454555

£349 + VAT ● AA31

Cheapest 24-pin printer. Paper loaded from the rear – more time consuming. 30 cps in letter quality mode, and 62 cps in draft. Print quality excellent: plenty of different type-styles built in. Not ultra fast.

Citizen 120D

☎ 0800 282692

£199 + VAT ● AA43

Dimensions: 3.7 kgs, and 370mm x 90mm x 238mm. Draft quality is 'dotty,' and poor, but NLQ is sharp and simple. A quiet beast, with cable to the computer connected on the side. Manual includes a complete written breakdown of all the printer control commands, and their effects.

Epson LX800

☎ 01 902 8892

£279 + VAT ● AA29

Very fast for 9 pin. Control panel for style selection, and Epson compatible. Reverse winding sheets requires care, though.

Epson EX800

☎ 01 902 8892

£629 + VAT ● AA29

Upgradable in 101 ways – cut sheet feeds, serial ports, longer life ribbons. Quiet, with respectable printing speed. Sans Serif/Roman NLQ fonts incorporated. Control panel to select fonts – just the same font with different spacings.

Epson LQ500

☎ 01 902 8892

£399 + VAT ● AA29

Features galore and price to match. Handles both Sans Serif and Roman styles of NLQ, for instance. Colour-printing upgrade kit available. 24 pin printer, offering excellent quality printing. Control panel to select from many available fonts (ie. the same font at different widths).

Panasonic KXP3131U

☎ 0753 73181

£335.25 (discont.) ● AA29

Daisywheel therefore superb quality – but can't print bit graphics (no trendy screen dumps), and if you want different fonts, you have to plug in a different Diablo-compatible one. Not quiet.

Mannesmann Tally MT81

☎ 0734 788711

£149 + VAT ● AA43

Dimensions: 70mm x 100mm x 265mm; weight, 4.5 kgs. Prints Epson and IBM graphics. Draft mode print quality is good: square printhead pins put ink onto greater areas. The printed output is more ornate than the Citizen. Manual is superb, but falls down in failing to explain control codes: for that you have to buy the applications manual. Certainly a very good buy.

Mini Office II

Database Software ☎ 0625 878888

£14.95 tape, £19.95 disk ● AA6

If you don't need full specification Mini Office II is for you.

Remarkably cheap for word-processor, database and spreadsheet, plus comms software and more. Packaging and documentation is good, and programs work in a menu environment.

Panasonic KXP1081

☎ 0753 73181

£219 + VAT ● AA29

Similar to DMP2000/2160: chunky, 9 pins, 10 inch carriage and compatible with Epson codes. Thorough A4 manual, good NLO mode – better than DMP – and condensed, draft and NLO modes.

Star LC 24-10

☎ 01 840 1800

£399 + VAT ● AA47

A low-cost 24 pin, 10 inch, 80 column Letter Quality printer: 8 resident fonts, all operable from the front control panel and 3 print variations. See the review in this issue, page 22.

Star LC-10

☎ 0494 471111

£199/£259 + VAT rrp ● AA32

First price is for standard dot matrix printer. Fonts selected by button, rather than typing in fiddly control code. Second price is for relatively inexpensive colour model. Uses multi-colour ribbon to produce different mixes, though there are currently no commercial programs to take advantage of this capability (but see the *Colouredump* review in AA46, page 24).

■ INTEGRATED PACKAGES

Protex

Arnor ☎ 0733 68909

£19.95 tape, £26.95 disk, £39.95 ROM ● AA3

Lightning fast on all tasks involving screen. True merging from separate files and disks to the cursor position is easy,

Mini Office II

Database ☎ 0625 878888

£14.95 tape, £19.95 disk ● AA6

Astonishingly cheap word processor, database, spreadsheet, graphics, comms and label printer all-in-one, it's continued to sell, and sell, and sell... Not full specification, but at this price who's complaining?

Protex Filer/Office

Arnor ☎ 0733 68909

£24.95/£34.95 disk ● AA34

Database that works comfortably with Protex, has powerful sorting options and comprehensive invoice printer. Can be slow, but good value.

■ EDUCATIONAL PROGRAMS

Amstrad Selection

Fernleaf Education ☎ 0474 359037

£25.95 disk/tape ● AA32

For age range 7 to 12+: Eight programs – including *Fletcher's Castle*, *Market Stall*, *The Perfume Hunter*, *The Raiders*, *Ferry Captain*, *Treasure*, and *Thorn Sea*.

Arc Master Pack Plus

Arc Education ☎ 0472 812226

£48 disk ● AA32

A massive pack of 70 programs: Junior; Primary; a parent/child adventure; DR Logo and word games. Each set available at £9 tape and £12 disk. Well presented with good graphics, reasonable musical ditties and plenty of options.

Kosmos

Kosmos ☎ 05255 3942

£9.95 tape, £13.95 disk ● AA32

Answer Back Junior Quiz lets you either answer the question; make a choice from a number of options; or say whether something is true or false. There's also *Factfile 500*, sets of additional questions for the program: arithmetic, spelling, sport and natural history.

The other range from Kosmos: vocabulary tutors in French, Spanish, German and Italian.

Funschool 2

Database Software ☎ 0625 878888

£9.95 tape, £14.95 disk ● AA43

So rare is it that educational software gets into the charts that it made the news pages of the weekly computer press. Actually there are three great packages here: under sixes, six to eights and over eights.

Wordhang

Bourne Education ☎ 0794 523301

£9.95 tape; £14.95 disk ● AA32

One of Bourne's range of ten programs. Others include *Happy Letters*, *Numbers and Writing* (all Infant); *Timeman One/Two* and *Map Rally* (all Junior); and the excellent *Chemistry and Physics Revision* (Senior).

■ BUSINESS/ACCOUNTS

● See also Pendown in 'Word Processing'

Protex Office

Arnor ☎ 0733 68909

£34.95 ● CPM+, 6128 only ● AA34

Requires Protex and Promerge to run. Information inputted using Protex. Mail merge templates included, and very well implemented invoice printing feature. A genuinely useful business system.

SD Microsystems range

SD Microsystems ☎ 0462 675106

General Ledger ● £19.95 ● AA32

Sales Invoicer Pack ● £19.95 ● AA26

Small Traders Pack ● £24.95 ● AA26

Stock Accounting System ● £39.95 ● 6128 only ● AA32

SD Microsystems have a range of quality small business systems. Consult original reviews for in-depth explanations of what each does and how it differs from the others – or better still, ring them and ask.

■ DATABASES

AtLast Plus

Rational Solutions ☎ 056681 511

£39.95 ● CPM+, 128k machines only ● AA30

Powerful: developed into user's requirements. Data capacity restricted only by disk size, and splitting fields into smaller elements possible. Printed output impressive. Beefy processing.

Masterfile III

Campbell Systems ☎ 0378 77762

£39.95 CPM+ ● AA30

With parent/child records – enabling tying together of records, saving space and time. Screen layouts and reports menu selected; not for faint hearts, but good results.

Random Access Database

Minerva Systems ☎ 0392 437756

£29.95 disk ● AA6

40 or 80 column screen. Good mathematical and string operations. Random disk accessing gives speed and power.

● See also Info-Script in '4. Integrated Packages'

■ SPREADSHEETS

Mastercalc 128

Campbell Systems ☎ 0378 77762

£33 disk ● 128K machines ● AA4

Can show two parts of spreadsheet at once. Includes notepad and calculator. Easy to use, but the mathematical formulae can only consist of the four basic arithmetic options. Slows down as more data is entered.

Matrix

Audiogenic Software ☎ 01 861 1166

£34.95 disk ● AA18

Uses disk to store data – so good capacity on the plus side, but poor speed on the minus side. Graphic options excellent. Onscreen prompts rare, making it hard at first. Calculating power good.

Supercalc II

Amsoft/Sorcim ☎ 0277 230222

£49.95 CPM+ ● AA4

First class documentation. Calculations can be determinative – performed on whether or not cell's contents match given value. Excellent help prompts and arithmetic functions.

Cracker

Newstar Software ☎ 0277 229509

£49.00 disk CPM+ ● AA9

Spreadsheets must be created from scratch. Documentation good, command sequences soon learned. Mathematical functions well done, with random numbers catered for. Files limited to 17K – and formulae programming not well implemented.

The Cracker
user's manual

SOUND

Amdrum

Cheetah ☎ 0222 555525

£34.95 ● AA13

Digital drum machine. Editor comprehensive. Not Midi compatible: to hear output you plug it into amplifier.

DHCP Midi Interface

DHCP ☎ 0440 61207

£69.95 interface, £34.95+ disk s'ware ● AA33

DHCP produce Midi software for various Midi interfaces for CPC, which are incompatible with each other.

Micro Music Creator

First Byte Software ☎ 0225 765086

£9.95 tape, £14.95 disk, £24.95 ROM ● AA38

A music composer that lets you put staves and notes onscreen and play tune back. Accents can't be inserted, though. Other side is sampler to capture sounds from tape and play them through CPC. Excellent.

Miditrack Performer

EMR ☎ 0702 335747

£49.95 interface, £79.90/£89.90 tape/disk s'ware ● AA13

Midi interface plus sequencing software to drive Midi equipped instruments. Records each instrument then plays them all at once. Onscreen layout similar to multi-track recorder. Excellent.

Foundation Sequencer

Foundation Software ☎ 0252 543945

£34.95 ● AA50

Foundation's package is the only step-time sequencer you can get for the CPC.

Midi Interface

Silicon Systems ☎ 061 848 8959

£59.95 interface, £59.95 software ● AA26

Useless alone, but software you can use with it – DX7, FB01, MT32, D50 and CZ101 – is diverse. Software prices vary, and lack presentation of EMR sequencer. High performance.

Ram Music Machine

RAM Electronics (Datel) ☎ 0782 744707

£49.99 tape, £59.99 disk ● AA17

All in one music package: Midi interface, sound sampler and music editor. Sampler can handle one sample of just over a second. Midi controller software and music editor comprehensive. No through port, though, so 484 users must use tape version. And you can't edit live played Midi compositions.

Speech Synthesizer

DK'tronics (Datel) ☎ 0782 744707

£29.99 ROM

Add-on producing speech by RSX's: loudspeakers supplied. Cannot include speech in program for someone else's CPC, though. Even so, excellent speech quality and value.

VISION

AMX Art

Database ☎ 0625 878888

£69.95 disk (includes mouse) ● AA7

User friendly, if little unsophisticated compared to *Advanced Art Studio*, but mouse helps greatly. Colour, sprays, textures, circles and host of other features.

Cherry Paint

Siren Software ☎ 061 228 1831

£9.99 disk ● AA20

WIMP controlled – ie mouse moves pointer to various icons to pull-down menus. B/W mode 2 only, but fun. Curves are difficult, but this is a bargain.

Advanced Art Studio

EEC ☎ 0753 888866

£24.95 disk ● AA21

Recently revitalised, this is the user-friendly, best and most powerful art package: works in all three modes. Can cycle through inks, and cut and paste different areas, transformations and reflections. Fill routines in coloured patterns. Available as a standard version for £15.95.

DART Scanner

Dart Electronics ☎ 0502 513707

£79.95 ● AA22

Attach reading device to your DMP2000, 3000 or 3160. Feed in picture to printer: device reads in picture as B/W image. Quality onscreen isn't amazing, but it works and it's fun.

The Informer

Treasure Island Software ☎ 0492 593549

£29 disk ● AA33

For creating animated displays, suitable for classroom and shop window: takes text, graphics and animated displays and produces slide show. Works best but not only with *Parrotty Plus* (see below).

CRL Image System

CRL ☎ 01 533 2918

£14.95 disk/tape

● AA12

Boasts range of picture manipulations and distortions, but lacks art options. Best on finished pictures – like a mini Quantel box.

Parrotty Plus

Treasure Island Software ☎ 0492 593549

£19.95 disk ● AA30

Rather than lots of effects used anywhere and at any time, *Parrotty Plus* 'remembers' every alteration and plays through the list to create animation. Note: can't dump pictures to printer without external program.

Electric Studio Light Pen

Electric Studio ☎ 0462 420222

464D £24.99, £14.99 ROM ● 6128 £24.99 ROM only ● AA1

Excellent drawing software, including rubber-banding shapes and lines, filling areas, spray-can etc. Accepts software written for it.

Vidi Digitizer

Rombo Productions ☎ 0506 414631

£89.95 ● AA15

Grabs picture from video recorder or camera and puts it on CPC screen, allowing you to alter it with an package. Easy to use. Software on tape, disk or ROM includes superb printer dump routine.

● Corrections, additions or ideas for sections to be included are welcome. Drop a line to: **AA Buyers, Amstrad Action, 4 Queen St, Bath BA1 1EJ**

ONLY POOLS AND HORSES

FOOTBALL BOXFORM £14.95 (+ £2 for 3" disc)

The ONLY pools program written by a GENUINE EXPERT who has been professionally employed as such by the leading pools company. He KNOWS how to help you win.

THE PROGRAM HAS FORECAST ON AVERAGE 50% MORE DRAWS THAN WOULD BE EXPECTED BY PURE CHANCE

FOOTBALL BOXFORM is not a gimmicky play thing but a serious statistical analysis of football form. Its sole objective is to improve the chances of winning on the pools or fixed odds and no other program comes near to tackling the problem so thoroughly. Homes aways and draws are shown in order of merit and true odds given for every match. Merit tables show at a glance the teams currently in form and those having a lean spell. Covers league and non-league clubs.

BOXFORM & HANDICAP WINNER £14.95 (+ £2 for 3" disc)

Two programs for the price of one. Easy to use and they never go out of date. All you need is a few minutes with a daily paper. BOXFORM weighs up a race by considering the many facets of form. Easily amended to suit the user's ideas. HANDICAP WINNER shows the value for money bets. Hundreds of winners in handicaps this year at 28/1, 25/1, 20/1, 16/1, 15/1.....etc., etc.

SPECIAL PRICE of £24.95 (+£2 for 3" disc) for all of the above programs.

Plus the BEST bets calculator available. So good it's used by bookies.

Why pay inflated prices? BOXOFF CLEVER and get the BEST
Available on tape or disc for SPECTRUM, CMD C64/128, AMS CPC's, BBC B, from:

RSX - LIB (1.0)

The RSX library utility

52 new BASIC
commands (RSXs)
supplied free!

Do you find RSXs Disappointingly Impractical?

* You don't have the machine code know-how to turn machine code routines into RSXs? * You find it painfully time-consuming to change the names of your RSX commands? * You are forced to use wastefully big files of RSXs, even if you don't want to use them all? * Your files have to be loaded at a specific address in memory to work? * You have problems with 2 or more files all requiring the same area of memory? * You find it difficult to keep track of (and use) your RSXs, as they are spread across many different files/discs?

RSX-LIB Allows you to add new commands to your CPC's BASIC Simply, Quickly, and Effectively!

* RSX-LIB stores the machine code routines (to be run by your RSX commands) on disc and holds information about them in its library. * When you want to use some RSXs, select the ones you require from the library (at the touch of a few buttons), and RSX-LIB will build an RSX file and save it to disc ready for use (automatically)! * The RSX file produced can be loaded and run anywhere in memory, giving you total flexibility - RSX-LIB actually searches your machine code for anything that could cause problems, and changes it (automatically) at run-time to suit the current memory location. * You can change the RSX command names easily and quickly if you need to before building the RSX file. * You can use your existing machine code routines (and magazine type-ins, etc) with RSX-LIB to run them as RSXs. * RSX-LIB will even do its best to pick out the machine code routines from existing RSX files for use with RSX-LIB in the same way!

A Complete RSX Management System.

* A simple-to-use utility with comprehensive (and friendly) manual. * No machine code expertise required. * Everything is done at the touch of a few buttons, and is as useful to the novice as to the experienced programmer. * The manual includes full specifications for the 52 RSXs supplied, and there is an example program showing their use. * The RSXs themselves are well worth the money!

Suitable for all CPC machines,
but supplied on DISC ONLY

Cheques (£ Sterling), Eurocheques, or UK PO's for
£19.95 (UK), £21.45 (Europe), £21.95 (Rest of World)

NOW.

Afterthought

The page we slip in at the last minute when it's too late to stop us

Custom made

Just a word of thanks to *Custom Car*, on sale at all good newsagents etc, for lending us the hot Manta on

the cover. It was great fun tearing up and down Queen Street, tyres smoking and... and... OK, it's true. No-one in their right minds would trust the AA team with a bicycle pump, let alone a 1900 bhp monster. Thanks for letting us use the pic, though, lads.

Brilliant new scheme!

Eagle-eyed readers will spot this month a *Type-Ins* section with a difference – they all work! No, actually, seriously now, we did have one or two problems last month, what with the irregular sunspot activity and the chip shop being shut for fumigation.

And we have had to turn a few type-ins down this month, unfortunately. There was that Macintosh emulator that unfortunately had an unexplained syntax error in line 40, for example, and the Intercity 125

simulator that never turned up. Worst of all though was Nigel Lawson's *Economic Planner*, which was five lines of BASIC he wanted £2,600 billion for...

Wot, no First Edition (or Protex)...

Oh gosh, we don't know how to tell you this, but we've crammed so many goodies into this ish that there just wasn't room for everything and... yes... yes, Mr Angry... yes... yes, if you had your way... yes... all be fired, I know... yes... oh blimey.

To the newsagent: Amstrad Action is distributed by COMAG

Dear newsagent,

Please reserve me a copy of the December issue of *Amstrad Action*, due out on Thursday 9 November

Name:

Address:

Telephone number:

If you're under 16, please get your parent or guardian to sign here:

Cheats never prosper

Or at least they won't if they followed every word of last month's *Cheat Mode*. Or at least, every individual character. You see a teensy weensy little bugette meant that the memory address that read 0DB8 should actually have read 0D8B.

That oh-so-honest Phil Howard actually phoned in to tell us he blundered, so all you hackers out there who couldn't get their infinite lives on *Shinobi* now know why.

CPC BUSINESS SOFTWARE

Prop. S. Denson, Unit 10, Jacks Hill Park, Graveley, Herts.

NEW!

CABAL

MEGA
"CABAL IS WITHOUT A DOUBT ONE OF THE FINEST
CONVERSIONS I'VE SEEN... ONE OF THE
ULTIMATE SHOOT-EM-UPS: YOUR SINCLAIR
"GOOD CONVERSION WITH EXCELLENT
GRAPHICS AND DEFINITELY WORTH
THE MONEY."
SINCLAIR USER

The coin-op sensation that throws you deep into enemy territory with little more than a low-powered, single shot repeater for protection. With superior marksmanship and lightning reactions you can increase the odds - in your favour.

Capture enhanced weaponry, including grenades, and now you can really make your mark! ... that is, until you come face to face

with the enemy gunships, tanks and submarines. Equip yourself for some stunning arcade action, load-up and FIRE!!
